

Carbon Footprint Report for Winchester City Council

Assessment Period: 1st April 2015 – 31st March 2016

## **Executive Summary**

Carbon Footprint Ltd has assessed Winchester City Council's greenhouse gas (GHG) emissions from 1<sup>st</sup> April 2015 to 31<sup>st</sup> March 2016, based on a dataset provided by the organisation. The chart below shows the sources of emissions, with electricity consumption accounting for 49.3% of the total emissions.

The table below demonstrates historical emissions compared to this year's results showing:

- A decrease in absolute emissions by 7.6% compared to the previous year (2014-15), and 14.8% compared to the baseline year (2009-10).
- A decrease in emissions per employee by 3.8% since the previous year.
- A decrease in emissions per capita by 8.0% compared to the previous year, and by 18.6% compared to the baseline year.

|                             | 2009-2010 | 2014-2015 | 2015-2016 | % change<br>from<br>base year<br>(2009/10) | % change<br>from<br>previous<br>year |
|-----------------------------|-----------|-----------|-----------|--|--------------------------------------|
| Total tonnes of CO₂e        | 5,388.70  | 4,971.06  | 4,593.44  | -14.8%                                     | -7.6%                                |
| Tonnes of CO₂e per employee | 9.45      | 9.84      | 9.47      | +0.2%                                      | -3.8%                                |
| Tonnes of CO₂e per capita   | 0.047     | 0.042     | 0.038     | -18.6%                                     | -8.0%                                |

This year Winchester City Council reviewed the scope and boundary of their carbon footprint. They have decided that from this assessment onwards, they will follow the operational control approach and expand the scope to include sheltered housing and communal areas. The base year and previous year were recalculated to include this additional data, and the Council decided to change the base year to 2009/10 (the sheltered housing data for 2008/09 was not as reliable).

The reduction in total GHG emissions is mainly a result of an 11.5% decrease in emissions from electricity consumption. Electricity consumption reduced by 230,000 kWh from the Council's operational sites (i.e. non-sheltered housing). Notable factors include the closure of Friarsgate car park and implementation of efficiency measures, such as LED lighting at Chesil car park. Another contributing factor was a lower emission factor for electricity this year (to account for a larger proportion of renewable energy in the national grid).

Report produced by: Georgina Whitlock

Report reviewed by: Katie Elmer

Director approval: John Buckley

### 1. Introduction

### 1.1. Scope of this work

Carbon Footprint Ltd has assessed the greenhouse gas emissions from 1<sup>st</sup> April 2015 to 31<sup>st</sup> March 2016, resulting from the energy consumption at Winchester City Council's facilities and its transport activities.

#### 1.2. Winchester City Council Overview

Winchester City Council (henceforth referred to as WCC) is one of 11 district councils in Hampshire. The Council serves a population of approximately 119,000 residents, covering an

area of 250 square miles.

Table 1: Company representative

Company representative responsible for this report within Winchester City Council

Paul Cooke

#### 1.3. What is a carbon footprint?

A carbon footprint is a measure of the impact our activities have on the environment in terms of the amount of greenhouse gases produced, measured in units of carbon dioxide equivalents (CO<sub>2</sub>e).

A carbon footprint is made up of two parts, direct and indirect emissions.

#### 1. Direct emissions:

These emissions are produced from two primary sources, the energy use in buildings and travel emissions, which are owned or controlled by the reporting organisation. Direct emissions encompass electricity use, burning oil or gas for heating, and fuel consumption as a result of business travel or distribution. Direct emissions correspond to elements within scopes 1, 2 and 3 of the World Resources Institute GHG Protocol, as indicated in Table 2.

**Footprint Activity** Scope Electricity, heat or steam generated onsite 1 Natural gas, gas oil, LPG or Coal use attributable to 1 company owned facilities Company owned vehicle travel Production of any of the 6 GHG's Direct 1  $(CO_2, CH_4, N_2O, HFC's, PFC's and SF_6)$ Consumption of purchased electricity, heat steam 2 and cooling Employee business travel (using transport not 3 owned by the company)

**Table 2: Direct emissions sources** 

#### 2. Indirect emissions:

Indirect emissions result from a company's upstream and downstream activities. These are typically from outsourced/contract manufacturing, and products and services offered by an organisation. Indirect emissions correspond to scope 3 of the World Resources Institute GHG Protocol excluding employee business travel as indicated in Table 3.

Table 3: Indirect emissions sources

| Footprint | Activity  | Scope |
|-----------|---|-------|
|           | Employee commuting  | 3     |
|           | Transportation of an organisation's products, materials or waste by another organisation  | 3     |
|           | Outsourced activities, contract manufacturing and franchises  | 3     |
|           | GHG emissions from waste generated by the organisation but managed by another organisation  | 3     |
| Indirect  | GHG emissions from the use and end of life phases of the organisation's products and services   | 3     |
|           | GHG emissions arising from the production and distribution of energy products, other than electricity, steam and heat, consumed by the organisation | 3     |
|           | GHG emissions from the production of purchased raw or primary materials   | 3     |
|           | GHG emissions arising from the transmission and distribution of purchased electricity   | 3     |

For businesses, the assessment focuses on direct emissions, as these lie under the control of the organisation.

We ask companies to recognise that there is an indirect emissions footprint and select suppliers based on their environmental credentials, as well as price and performance.

#### 1.4. How is the carbon footprint calculated?

The carbon footprint appraisal is derived from a combination of client data collection and data computation by Carbon Footprint Ltd's analysts.

Carbon Footprint Ltd analysts have calculated Winchester City Council's footprint based on the 2015 metrics (version 2.0) developed by the UK Department for Environment, Food and Rural Affairs (Defra) and the Department of Energy and Climate Change (DECC) and have prepared a summary for Winchester City Council included in this report. These metrics use GHG activity data multiplied by GHG emission factors. Carbon Footprint Ltd has selected this preferred method of calculation as a government recognised approach and uses data which is realistically available from the client, particularly when direct monitoring is either unavailable or prohibitively expensive.

Carbon Footprint Ltd confirms that the methodology used to quantify the carbon footprint meets the following principles:

- a) The subject and its boundaries have been clearly identified and documented.
- b) The carbon footprint has been based on primary activity data unless the entity could not demonstrate that it was not practicable to do so, in which case an authoritative source of secondary data relevant to the subject was used.
- c) The methodology employed minimised uncertainty and yielded accurate, consistent and reproducible results.
- d) Emission factors used are germane to the activity concerned and current at the time of quantification.
- e) Conversion of non-CO<sub>2</sub> greenhouse gases to CO<sub>2</sub>e has been based upon the 100 year Global Warming Potential figures published by the IPCC or national (Government) publication.
- f) Carbon footprint calculations have been made exclusive of any purchases of carbon offsets.
- g) All carbon footprints have been expressed as an absolute amount in tCO<sub>2</sub>e.

#### 1.5. Why is it important?

Over the past two decades the effect of climate change has become more marked. Considerable evidence exists that climate change has been exacerbated by human activity. Changes in our post-industrial lifestyles have altered the chemical composition of the atmosphere, generating a build-up of greenhouse gases — primarily carbon dioxide, methane, and nitrous oxide levels.

The consequences of inaction will be disasterous. Rising global temperatures will cause sea levels to rise and local climate conditions to be altered, affecting forests, crop yields, and water supplies. It will also affect human health, accelerate species extinction, and disrupt many types of ecosystem. Deserts may expand and some of our countryside may be permanently altered.

For this reason it is vital that all individuals, businesses, organisations and governments work towards the common goal of reduced carbon emissions. The carbon footprint assessment will enable your business to:

- Report on greenhouse gas (GHG) emissions
- Set targets to reduce emissions
- Make supply chain selection based on environmental factors
- Achieve cost savings through managing resources, energy saving and implementing good environmental practice
- Generate great PR through communicating your environmental successes
- Improve reputation with customers and potential customers
- Broaden market opportunities by differentiating your products and brands
- Raise staff morale and attract high-calibre employees
- Attract ethical investors
- Be prepared for future legislative changes

#### 1.6. BS ISO 14064-1:2006

This GHG report has been prepared in accordance with Part 1 of BS ISO 14064: 2006. The GHG inventory, report, or assertion has not been verified.

### 1.7. Greenhouse Gas Protocol Corporate Standard

This GHG calculation and report has been prepared in accordance with The Greenhouse Gas Protocol Corporate Standard. The GHG inventory, report, or assertion has not been verified.

# Appraisal Boundaries and Summary of Data Supplied

A summary of the information submitted by WCC and the boundaries set for the calculation are detailed below.

### 2.1. Organisational boundaries

WCC has decided to change the control approach it uses to consolidate its GHG emissions to 'operational control'. The Council believes this approach best suits their activities and GHG reporting requirements. The GHG Protocol defines operational control as having the ability and authority to introduce and implement operating policies at the operation.

Managed services, such as River Park Leisure Centre and Meadowside Leisure Centre, will now be reported in Scope 3 (WCC can influence, rather than control, the operations as the management of the facilities is contracted out). The Council's total scope has also been expanded this year to include the sheltered housing and communal areas of which WCC has operational control over. These properties are managed by the Housing Services department.

### 2.2. Operational boundaries

GHG Emissions and removals associated with WCC's operations:

| Figure 1: Assessment boundary                  |                                       |   |  |  |
|--|---------------------------------------|---|--|--|
| Scope 1 Direct Emissions                       | Scope 2 Energy Indirect               | Scope 3<br>Other Indirect   |  |  |
| Fuel combustion Natural gas, gas oil, petrol   |                                       | Purchased materials and fuels Water (for selected sites)  |  |  |
| Owned Transport Council-owned car & van travel | Consumption of purchased electricity, | Transmission and distribution of  energy Electricity  Leased assets, outsourcing and franchising Contractor emissions, wan and larger           |  |  |
| Process emissions                              | heat steam and cooling  Electricity   | Contractor emissions - van and lorry travel, Park & Ride, leisure centres  Transport related activities Business travel (rail, taxi etc.), grey |  |  |
| None   | _                                     | Sold goods and services  None   |  |  |
| Fugitive emissions Refrigerants                |                                       | Waste Disposal Residual & Recyclable  |  |  |

Key:

Within the assessment boundary Outside of assessment boundary

The indirect GHG sources that are outside the assessment boundary have been excluded from quantification because quantification of their contribution to the GHG emissions is not technically feasible or cost effective.

#### 2.3. Biomass

There are no CO<sub>2</sub> emissions from the combustion of biomass to be considered within this report.

#### 2.4. Procurement

Procurement has not been accounted for within the scope of the carbon footprint assessment, however the Council does acknowledge it as an important factor to consider in their sustainability programme. The day to day procurement process is down to the individual departments and their specific needs. The awareness of the individuals placing the purchase orders and the cost of postage and packaging from outside the UK are the limiting factors. The Council strives to include a 'green policy' in its strategies and where possible, procurement includes this. For example, joint working in waste and electric car trials. Also, where possible, the specification for large contracts includes a green clause/policy.

#### 2.5. Accuracy of the carbon footprint calculation

The result of a carbon footprint calculation varies in accuracy depending on the data set provided. The more accurate the data supplied, the more accurate the final result which will subsequently allow for better targeting of areas where improvements can be made. An overview of the expected accuracy per element for this assessment is shown in Table 4.

Table 4: Assessment accuracy

| Dataset                         | Source of data and comments   | Accuracy  | Materiality           |
|---------------------------------|---|-----------|-----------------------|
| Site electricity                | Utility bills & meter readings  | Excellent | Very High<br>(40% +)  |
| Site gas                        | Utility bills & meter readings  | Excellent | High<br>(20% - <40%)  |
| Depot contract lorry travel     | Biffa - fuel & mileage figures provided per vehicle. Landscape Group – annual mileage provided. | Excellent | Medium<br>(5% - <20%) |
| Depot contract car & van travel | Mileage records.  | Excellent | Medium<br>(5% - <20%) |
| Gas oil                         | Annual litres of fuel.  | Excellent | Low<br>(1% - <5%)     |
| Park & Ride bus service         | Contracted mileage (Stagecoach).  | Good      | Very Low<br>(<1%)     |
| Cash opt out car travel         | Register provided by payroll. Annual mileage, fuel type and vehicle size provided.              | Excellent | Very Low<br>(<1%)     |
| Council-owned car travel        | Mileage records. Annual mileage, fuel type and vehicle size provided.                           | Excellent | Very Low<br>(<1%)     |
| Site petrol                     | Annual litres of fuel.  | Excellent | Very Low<br>(<1%)     |

| Dataset                  | Source of data and comments   | Accuracy  | Materiality       |
|--------------------------|---|-----------|-------------------|
| Grey fleet car travel    | Register provided by payroll. Annual mileage, fuel type and vehicle size provided.  | Excellent | Very Low<br>(<1%) |
| Refrigeration & A/C      | Service records/invoices.   | Excellent | Very Low<br>(<1%) |
| Council-owned van travel | Mileage and fuel records.   | Excellent | Very Low<br>(<1%) |
| Water                    | Utility bills and meter readings. Wastewater was estimated assuming 95% of the water supplied is returned to the sewer (same percentage Southern Water uses for billing). | Good      | Very Low<br>(<1%) |
| Rail travel              | Journey details from expense claims.  | Excellent | Very Low<br>(<1%) |
| Flights                  | Journey details from expense claims.  | Excellent | Very Low<br>(<1%) |
| Taxi Travel              | Journey details from expense claims.  | Excellent | Very Low<br>(<1%) |

Materiality is determined by the percentage contribution of each element to the overall footprint. Data has been derived from utility bills, expense claims and internal records.

Most of the data accuracy is excellent, apart from the Park and Ride bus service and water (rated 'good').

The Park and Ride bus service is contracted out to Stagecoach. The annual mileage has been estimated based on the routes taken and the number of services running over the year. Data accuracy could be improved by recording annual fuel consumption of each bus.

Water data has only been provided for four sites and these do not include any of the public conveniences or leisure centres. Therefore, further improvements still need to be made with regard to recording water consumption.

#### 2.6. Data provided for the carbon footprint appraisal

The data provided by WCC for the appraisal is presented in Annex A.

#### 2.7. Greenhouse gas removals

Within the calculation of WCC's carbon footprint, there are no business processes resulting in the reduction of greenhouse gases from the atmosphere to be deducted from the calculation.

# 3. Carbon Footprint Results

### 3.1. Summary of results

The total carbon footprint for WCC for the period ending 31st March 2016 was 4,593.44 tCO₂e.

Table 5 provides a summary of results for WCC's carbon footprint calculation by scope and source activity. As the management of WCC's two leisure centres is contracted out, the associated energy consumption is recorded as scope 3 emissions.

Table 5: Results of WCC's carbon footprint assessment by scope, business unit and source activity

| Scope                     | Activity   | Tonnes CO₂e |
|---------------------------|--|-------------|
|                           | Site gas consumption                                 | 515.66      |
| Saama 1                   | Site gas oil   | 76.81       |
|                           | Council-owned car travel                             | 31.52       |
| Scope 1                   | Site petrol  | 28.29       |
|                           | Refrigeration & A/C                                  | 6.39        |
|                           | Council-owned van travel                             | 4.71        |
| Scope 1 S                 | ub Total   | 663.38      |
| Scope 2                   | Electricity generation                               | 1,629.79    |
| Scope 2 S                 | ub total   | 1,629.79    |
|                           | Leisure centres (electricity & gas)                  | 1,192.45    |
|                           | Depot contract lorry travel                          | 625.55      |
|                           | Depot contract car & van travel                      | 255.63      |
|                           | Electricity transmission & distribution <sup>1</sup> | 134.56      |
| Coope 2                   | Business car travel <sup>2</sup>                     | 46.13       |
| Scope 3                   | Park & Ride bus service                              | 38.09       |
|                           | Water (and wastewater)                               | 3.94        |
|                           | Business rail travel                                 | 3.66        |
|                           | Business flights                                     | 0.16        |
|                           | Business taxi travel                                 | 0.10        |
| Scope 3 Sub Total         |  | 2,300.28    |
| Total ton                 | nes of CO₂e  | 4,593.44    |
| Tonnes of                 | f CO₂e per employee                                  | 9.47        |
| Tonnes of CO₂e per capita |  | 0.038       |

The following charts (Figures 2 and 3) show the breakdown of the total GHG emissions produced by WCC. It can be seen that 49.3% of the total emissions is produced as a result of electricity consumption. The other two significant factors are gas consumption and depot contract lorry travel, contributing to 26.3% and 13.6% of the total emissions respectively. (The depot contract travel relates to travel that Biffa and the Landscape Group undertake for WCC-related work).

<sup>&</sup>lt;sup>1</sup> For properties WCC have operational control over (i.e. does not include the leisure centres).

<sup>&</sup>lt;sup>2</sup> Includes both cash opt out car travel and grey fleet car travel.

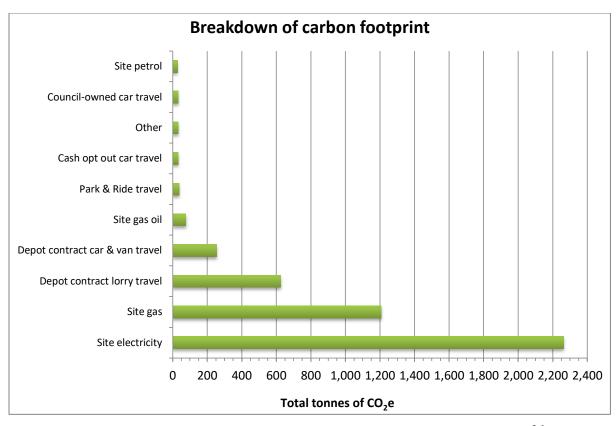

Figure 2: Contribution in tonnes of CO₂e of each element of WCC's carbon footprint 3 4

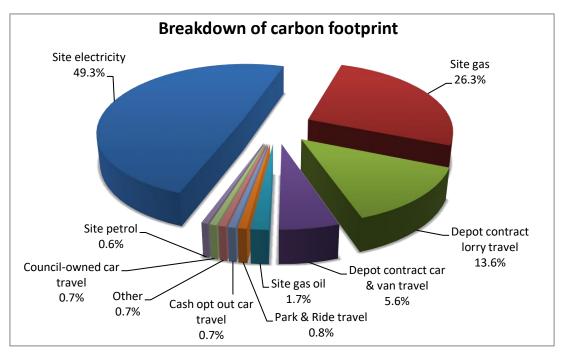

Figure 3: Percentage contribution of each element of WCC's carbon footprint

\_

<sup>&</sup>lt;sup>3</sup> 'Other' includes: council-owned van travel, grey fleet travel, refrigeration & A/C, rail & taxi travel, flights and water.

<sup>&</sup>lt;sup>4</sup> Gas and electricity include the leisure centres' emissions (scope 3).

#### 3.2. Emissions from energy usage at site facilities

Figure 4 shows the distribution of site GHG emissions (from electricity and gas usage) across WCC's assets. 'Other council assets' account for the majority of emissions (42.1%) – this encompasses the street lighting and over 50 properties (e.g. the Guildhall and city offices). However, combined, the two leisure centres (River Park and Meadowside) account for almost as many emissions. It would therefore be more effective of time and resources to focus on how to make the leisure centres more efficient and reduce the energy demand there.

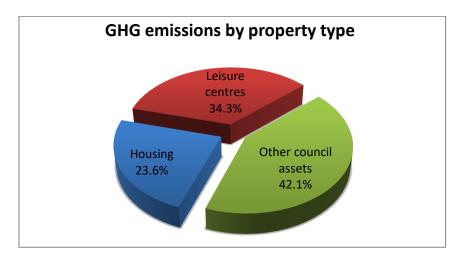

Figure 4: Breakdown of site CO<sub>2</sub>e emissions by property type

From analysing the annual energy consumption of the Council's properties (excluding sheltered housing), it can be seen that River Park Leisure Centre is the highest energy consuming site and the Brooks car park is the second highest (Table 6).

Almost 60% of River Park Leisure Centre's energy consumption is from gas use, which is significantly higher than other properties (Figure 5). This is because of swimming pool heating, specific heating requirements of fitness rooms, longer opening hours and higher occupancy rates. The Brooks car park has no heating requirements; electricity is used for lighting the car park and stairwells.

Table 6: CO₂e emissions as a result of site energy consumption for the 10 highest energy consuming sites (excluding sheltered housing) <sup>5</sup>

| Site                      | Electricity (tCO₂e) | Natural Gas (tCO₂e) | Total tCO₂e |
|---------------------------|---------------------|---------------------|-------------|
| River Park Leisure Centre | 455.54              | 670.42              | 1,125.96    |
| Car Park - Brooks         | 320.63              | n/a                 | 320.63      |
| Guildhall                 | 204.94              | 41.57               | 246.51      |
| City Offices              | 127.83              | 31.19               | 159.02      |
| Car Park - Tower Street   | 129.83              | n/a                 | 129.83      |
| Kings Court               | 98.41               | 8.13                | 106.54      |
| Car Park Chesil           | 82.45               | n/a                 | 82.45       |
| Meadowside Leisure Centre | 44.48               | 22.02               | 66.49       |
| Bar End Depot             | 20.89               | 12.83               | 33.72       |

<sup>&</sup>lt;sup>5</sup> Top 10 emitters shown – see Annex for complete breakdown of energy consumption for all sites.

Figure 5: CO₂e emissions per site and per energy type for the top 10 emitting sites (excl. sheltered housing)

When comparing the energy consumption of the top four office-type buildings (occupied by Council staff), it was found that the Guildhall produces the most emissions per employee, whereas the City Offices produces the lowest (Figure 6 and Table 7). This is likely due to different operating hours, as well as different activities that occur on-site (e.g. the Guildhall has function rooms and a cafe).

Table 7: CO₂e emissions from site energy consumption on a per employee basis

| Site                                   | No. of employees | Total tCO₂e | tCO₂e per employee |
|--|------------------|-------------|--------------------|
| Guildhall                              | 44               | 246.51      | 5.60               |
| City Offices                           | 314              | 159.02      | 0.51               |
| Kings Court                            | 105              | 106.54      | 1.01               |
| Hyde Lodge                             | 10               | 14.28       | 1.43               |
| Total/Average (for tCO₂e per employee) | 473              | 526.34      | 1.11               |

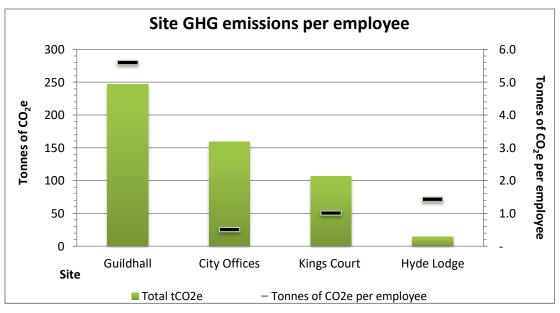

Figure 6: CO₂e emissions on a per site and employee basis

In terms of the energy consumption for WCC's sheltered housing schemes and communal areas, Normandy Court was the site producing the highest amount of emissions and Makins Court the second highest (Table 8). For both sites the majority of emissions are from gas consumption, which is significantly higher than the other sites (Figure 7). It is recommended that further analysis is undertaken to check that the billing is accurate and identify where any savings can be made.

| Site               | Electricity (tCO₂e) | Natural Gas (tCO₂e) | Total tCO₂e |
|--------------------|---------------------|---------------------|-------------|
| Normandy Court     | 15.05               | 95.51               | 110.55      |
| Makins Court       | 19.24               | 77.84               | 97.08       |
| Whitewings House   | 37.43               | 43.14               | 80.57       |
| Danemark Court     | 22.85               | 47.49               | 70.34       |
| Matilda Place      | 14.70               | 35.27               | 49.97       |
| Victoria House     | 0.41                | 41.49               | 41.90       |
| Eastacre           | 9.35                | 23.14               | 32.49       |
| Richard Moss House | 27.26               | 0.00                | 27.26       |
| Brittany House     | 23.56               | 0.00                | 23.56       |
| Bartholomew Close  | 22.91               | 0.00                | 22.91       |
| Total              | 192.75              | 363.88              | 556.64      |

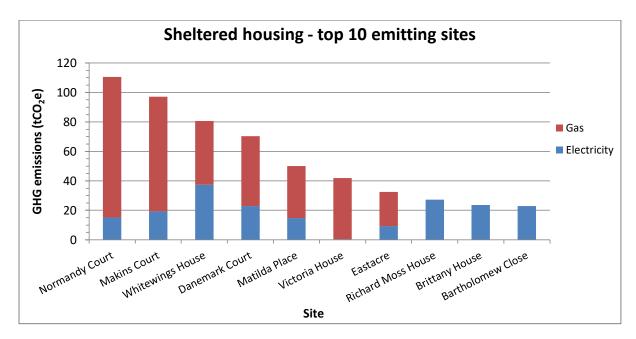

Figure 7: CO₂e emissions per site and energy type for the top 10 emitting sheltered housing sites

The detailed results are given in Annex A.

### 3.3. Emissions from transport & travel

Figure 8 and Table 9 show the GHG emissions resulting from travel. It can be seen that the largest contributor is depot contract lorry travel, accounting for 62.2% of the total transport emissions. This relates to travel that Biffa and the Landscape Group undertake for WCC-related work. In comparison the amount of CO<sub>2</sub>e caused by 'other' travel (council-owned van travel, rail, taxi travel and flights) is very low at less than 1% combined.

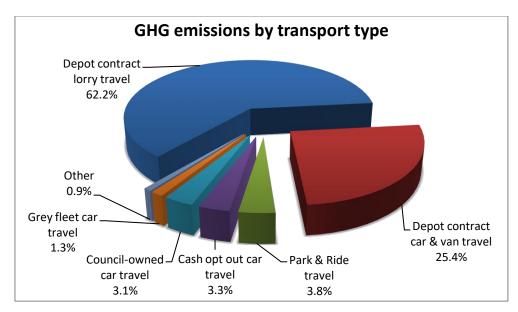

Figure 8: Percentage contribution of each element to transportation emissions

\*Other includes; council-owned van travel, rail & taxi travel and flights

Table 9: CO₂e emissions due to transportation

| Type of Travel                  | Tonnes of CO <sub>2</sub> e |  |  |
|---------------------------------|-----------------------------|--|--|
| Depot contract lorry travel     | 625.55                      |  |  |
| Depot contract car & van travel | 255.63                      |  |  |
| Park & Ride travel              | 38.09                       |  |  |
| Cash opt out car travel         | 32.82                       |  |  |
| Council-owned car travel        | 31.52                       |  |  |
| Grey fleet car travel           | 13.31                       |  |  |
| Other                           | 8.64                        |  |  |
| Total                           | 1,005.56                    |  |  |

The detailed results are given in Annex A.

#### 3.4. Other emissions

WCC use gas oil and petrol to power equipment such as large ride-on lawnmowers, strimmers and blowers etc. The associated emissions are provided in Table 10.

Table 10: CO₂e emissions due to other fuel use

| Type of fuel | Tonnes of CO <sub>2</sub> e |
|--------------|-----------------------------|
| Gas oil      | 76.81                       |
| Petrol       | 28.29                       |
| Total        | 105.10                      |

The emissions associated with water consumption (supply and wastewater treatment) have been calculated for four of WCC's sites (Table 11). Due to a lack of data monitoring, these currently do not include the public conveniences or the leisure centres, which would be significant users. It is important that improvements are made to the monitoring of water consumption across all of the sites.

Table 11: CO₂e emissions due to water usage

| Site         | Water supplied (m³) | Tonnes of CO₂e |
|--------------|---------------------|----------------|
| Guildhall    | 2,062               | 2.10           |
| City Offices | ffices 1,280 1.30   |                |
| West Wing    | 507                 | 0.52           |
| Abbey House  | 24                  | 0.02           |
| Totals       | 3,873               | 3.94           |

During the data period, the Courtyard Bar was the only site that required a top up of refrigerant gas (Table 12).

Table 12: CO<sub>2</sub>e emissions as a result of on-site refrigerant gas replenishment

| Location      | Amount Refilled (kg) | Refrigerant type | tCO₂e |
|---------------|----------------------|------------------|-------|
| Courtyard Bar | 3.6                  | R407C            | 6.39  |

## 4. Comparison and benchmarking

### 4.1. Comparison to base year emissions

This is the eighth carbon footprint assessment WCC has carried out. There have been several changes this year in how the carbon footprint has been calculated. As mentioned previously, WCC have chosen to change its control approach to 'operational control'. This means that the leisure centres are now reported in Scope 3. The consumption data for street lighting now only represents the lights that the Council have operational control over, which is significantly lower than previous year data which related to all street lights within WCC's district. Furthermore, WCC have expanded their scope to include the energy associated with sheltered housing and communal areas of which they have operational control. The previous year (2014/15) and the base year (2009/10) were recalculated to incorporate this change. WCC decided to change the base year from 2008/09 to 2009/10 due to the availability and reliability of energy data for sheltered housing and communal areas.

Table 13 and Figure 9 show historical emissions per activity, as well as WCC's total carbon footprint, tonnes of  $CO_2e$  per employee and tonnes of  $CO_2e$  per capita.

Tonnes of CO2e for footprint year ending in % change % change **Element** 2010 2015 2016 on baseline on previous year (2010) year Site electricity 2,795.32 2,557.74 -19.0% -11.5% 2,264.36 Site gas 1,290.79 1,222.98 1,208.10 -6.4% -1.2% 803.95 Depot contract lorry travel 876.66 625.55 -22.2% -28.6% Depot contract car & van travel n/a 50.27 255.63 +408.5% n/a 82.51 76.81 -6.9% Site gas oil Unknown n/a Park & Ride bus service 13.55 38.31 38.09 +181.2% -0.6% 47.29 Cash opt out car travel 32.82 -30.6% n/a n/a Other \* 445.48 31.68 32.27 -92.8% +1.9% -17.5% Council-owned car travel 39.61 38.19 31.52 -20.4% Site petrol Unknown 25.42 28.29 n/a +11.3% -14.8% -7.6% Total tonnes of CO2e 5,388.70 4,971.06 4,593.44 Tonnes of CO₂e per employee 9.45 9.84 9.47 +0.2% -3.8% Tonnes of CO₂e per capita 0.047 0.042 0.038 -18.6% -8.0%

Table 13: WCC's carbon footprint comparison and percentage change

<sup>\* &#</sup>x27;Other' includes: grey fleet car, council-owned van, motorbike, rail and taxi travel, flights, water and refrigerants.

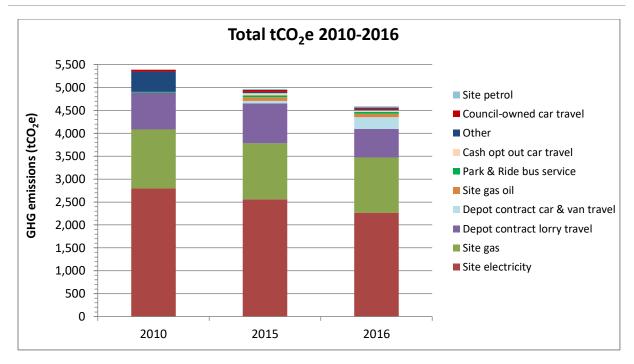

Figure 9: Detailed emissions comparison for the various aspects of WCC's carbon footprint

WCC's carbon footprint has decreased by 7.6% compared to the previous year (Table 13 and Figure 9). This is largely as a result of an 11.5% decrease in emissions from electricity consumption (293 tCO $_2$ e). The main reason behind this significant emissions reduction is a 230,000 kWh decrease in electricity consumption at WCC's operational sites (i.e. non-sheltered housing). Notable sites include:

- Friarsgate car park was closed completely on 31st March 2015, resulting in a reduction of approximately 60 tCO₂e from the previous year.
- Chesil car park the lighting upgrade to LED was completed in November 2015. This has resulted in a 21.5% reduction in consumption (45,000 kWh), which approximately equates to 30 tCO<sub>2</sub>e.
- City Offices a 15% reduction in electricity consumption (approximately 34 tCO₂e).
- Meadowside Leisure Centre installation of LED lighting and PIR sensors in the lower use areas has resulted in an 18.6% reduction in electricity use (approximately 14 tCO₂e).

Another contributing factor to the reduction in electricity emissions is a lower emission factor this year. The emission factor has reduced by 6.5% from the previous year to account for a larger proportion of renewable energy within the national grid.

Gas consumption has also reduced compared to the previous year due to Winter 2015/16 being milder. Heating controls and usage have also been optimised and are being monitored regularly at the City Offices and Guildhall. The gas consumption at Meadowside Leisure Centre, however, increased from the previous year, which the leisure centre manager attributes to higher levels of usage and increased gym membership.

In total, business travel by car (company car, cash opt-out and grey fleet) reduced by approximately 58,000 miles from last year. The electric company cars were used 50.8% more than the previous year (based on miles travelled).

This year the travel data provided by Biffa appears to be more accurate, as annual mileage and fuel used has been provided per vehicle (31 lorries and 4 vans). Biffa continues its endeavours to monitor and reduce idling times, as well as investigate ways to improve their data.

The amount of travel undertaken by the Landscape Group (included within depot contract car & van travel) has significantly increased from the previous year (approximately 150 tCO<sub>2</sub>e). When queried, the supplier said that they had to purchase more vehicles in order to fulfil all the jobs for WCC. I recommend that a review should be carried out on the jobs that have been requested and determine where savings can be made (e.g. by looking at the necessity of the activities, whether the frequency is at an effective level, and whether travel is conducted in an efficient way, consolidating journeys).

Overall, when normalised against the population figure for Winchester, the Council's GHG emissions have shown a reduction from the previous year and the base year (Figure 10).

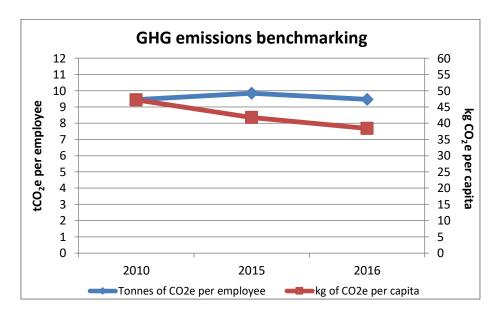

Figure 10: Carbon footprint of Winchester City Council for internal benchmarks

Carbon Footprint Ltd recommends that organisations use the base-year GHG inventory as a benchmark to measure against. When using the base-year GHG inventory as a benchmark, organisations can set realistic reduction targets and measure their progress year on year. This can also provide excellent marketing opportunities, where real figures can demonstrate your commitment towards helping fight climate change.

## Carbon Footprint Standard

#### 5.1. Brand endorsement

Winchester City Council, in conjunction with Carbon Footprint Ltd, has assessed its carbon footprint and shown a reduction of 14.8% based on its absolute emissions against the baseline year. By achieving this Winchester City Council has qualified to use the Carbon Footprint Standard branding. This can be used on all marketing materials, including web site and customer tender documents, to demonstrate your carbon management achievements.

The Carbon Footprint Standard is recognition of your organisations commitment to carbon management. The text to the right hand side of the logo demonstrates what level you have achieved in line with international best practice.

# A Annex A - Supplied Data and Emissions Breakdown

This annex shows the data that Winchester City Council has supplied Carbon Footprint Ltd for the calculation of its emissions. At the end of each table one or several columns have been added that display the emissions and calculations associated for each item of data provided by Winchester City Council. It should be noted that the latter has been calculated by Carbon Footprint Ltd, and not provided by Winchester City Council.

#### A.1 Data Used for Scope 1 Emissions Assessment

This section contains the data related to the direct emissions attributable to Winchester City Council. These include the energy usage in Winchester City Council's buildings (excluding purchased electricity, since this corresponds to Scope 2, indirect emissions), any Council-owned vehicle transport and any of the other 6 greenhouse gases produced.

Table 14: Data supplied and emissions breakdown for other fuel use

| Type of fuel | Litres | Tonnes of CO₂e |
|--------------|--------|----------------|
| Gas oil      | 26,406 | 76.81          |
| Petrol       | 12,890 | 28.29          |
| Total        | 39,296 | 105.10         |
