Chapter 1

Introduction

1.1 LUC has been commissioned by Winchester City Council to carry out a Habitats Regulations Assessment (HRA) of its emerging Local Plan.

1.2 The purpose of this report is to identify which European sites have the potential to be affected by the Local Plan, collate information on these sites, outline the pathways by which they could be affected, and to set out the scope of the subsequent HRA Screening and Appropriate Assessment.

Background to the Local Plan

1.3 Winchester City Council adopted Part 1 of its current Local Plan in March 2013, with Part 2 – Development Management and Site Allocations being adopted by the Council in April 2017. The Denmead Neighbourhood Plan, which forms part of the current Local Plan was made in April 2015 and is in the very early stages of being updated. The final Development Plan Document (DPD) within the current Local Plan is the Gypsy, Traveller and Travelling Show people DPD, which was adopted February 2019. The new Local Plan will cover the period to 2039 and replace the existing Local Plans for Winchester District excluding the South Downs National Park, which has its own adopted Local Plan.

1.4 The City Council undertook an initial consultation in 2018 to gather feedback on key issues for the district to be addressed by the new Local Plan. Since then the Council has declared a climate emergency in June 2019 and is committed to becoming a carbon neutral council by 2024. The ambition for the wider district is that it should become carbon neutral by 2030. The target of achieving carbon neutrality must be fully woven into the local plan making process and any implications will need to be taken into account in the HRA.

1.5 The council will be consulting on the initial Strategic Issues and Options in September 2020 and is aiming to issue a Draft Local Plan for consultation ('Regulation 18') in March/April 2021. A Habitats Regulations Assessment report will be published alongside the Draft Plan for consultation.

The requirement to undertake Habitats Regulations Assessment of Development Plans

1.6 The requirement to undertake HRA of development plans was confirmed by the amendments to the Habitats Regulations published for England and Wales in 2007; the currently applicable version is the Habitats Regulations 2017, as amended. When preparing its new Local Plan, Winchester City Council (WCC) is therefore required by law to carry out an HRA. WCC can commission consultants to undertake HRA work on its behalf and this (the work documented in this report) is then reported to and considered by WCC as the 'competent authority'. WCC will consider this work and would usually only progress the Local Plan if it considers that the Plan will not adversely affect the integrity **[See reference 1]** of any European site (the exception to this would be where 'imperative reasons of overriding public interest' can be demonstrated; see paragraph 1.18). The requirement for authorities to comply with the Habitats Regulations when preparing a Local Plan is also noted in the Government's online Planning Practice Guidance **[See reference 2]** (PPG).

1.7 HRA refers to the assessment of the potential effects of a development plan on one or more sites afforded the highest level of protection in the UK: SPAs and SACs. These were classified under European Union (EU) legislation but, since 1 January 2021, are protected in the UK by the Habitats Regulations 2017 (as amended). Although the EU Directives from which the UK's Habitats Regulations originally derived are no longer binding, the Regulations still make reference to the lists of habitats and species that the sites were designated for, which are listed in annexes to the EU Directives:

- SACs are designated under the Habitats Regulations and target particular habitat types (specified in Annex 1) and species (Annex II). The listed habitat types and species (excluding birds) are those considered to be most in need of conservation at a European level. Designation of SACs also has regard to the threats of degradation or destruction to which the sites are exposed and, before EU exit day, to the coherence of the Natura 2000 network of European sites. After EU exit day, regard is had to the importance of such sites for the coherence of the national site network.
- SPAs are classified in accordance with Article 4(1) of the European Union Birds Directive [See reference 3] for rare and vulnerable birds (Annex I), and under Article 4(2) for regularly occurring migratory species not listed in Annex I.

1.8 The term 'European sites' was previously commonly used in HRA to refer to 'Natura 2000' sites [See reference 4] and Ramsar sites (international designated under the Ramsar Convention). However, a Government Policy Paper [See reference 5] on changes to the Habitats Regulations 2017 post-Brexit states that:

- Any references to Natura 2000 in the 2017 Regulations and in guidance now refers to the new 'national site network'.
- The national site network includes existing SACs and SPAs; and new SACs and SPAs designated under these Regulations.
- Designated Wetlands of International Importance (known as Ramsar sites) do not form part of the national site network. Many Ramsar sites overlap with SACs and SPAs and may be designated for the same or different species and habitats.

1.9 Although Ramsar sites do not form part of the new national site network, Government guidance [See reference 6] states that:

“Any proposals affecting the following sites would also require an HRA because these are protected by government policy:

- proposed SACs

- potential SPAs
- Ramsar sites - wetlands of international importance (both listed and proposed)
- areas secured as sites compensating for damage to a European site.”

1.10 Furthermore, the NPPF [\[See reference 7\]](#) and good practice guidance [\[See reference 8\]](#) currently state that competent authorities responsible for carrying out HRA should treat Ramsar sites in the same way as SACs and SPAs.

1.11 The legislative requirement for HRA does not apply to other nationally designated wildlife sites such as Sites of Special Scientific Interest or National Nature Reserves; therefore, for clarity, this report uses the term 'European sites' rather than 'national site network'.

1.12 The overall purpose of an HRA is to conclude whether or not a proposal or policy, or whole development plan would adversely affect the integrity of the site in question. This is judged in terms of the implications of the plan for a site's 'qualifying features' (i.e. those Annex I habitats, Annex II species, and Annex I bird populations for which it has been designated). Significantly, HRA is based on the precautionary principle. Where uncertainty or doubt remains, an adverse effect should be assumed.

Stages of HRA

1.13 The HRA of development plans is undertaken in stages (as described below) and should conclude whether or not a proposal would adversely affect the integrity of the European site in question.

1.14 LUC has been commissioned by WCC to carry out HRA work on the Council's behalf, and the outputs will be reported to and considered by WCC, as the competent authority, before adopting the Plan.

1.15 The HRA also requires close working with Natural England as the statutory nature conservation body [See reference 9] in order to obtain the necessary information, agree the process, outcomes and mitigation proposals. The Environment Agency, while not a statutory consultee for the HRA, is also in a strong position to provide advice and information throughout the process as it is required to undertake HRA for its existing licences and future licensing of activities.

Requirements of the Habitats Regulations

1.16 In assessing the effects of a Local Plan in accordance with Regulation 105 of the Conservation of Habitats and Species Regulations 2017 (as amended) (the 'Habitats Regulations'), there are potentially two tests to be applied by the competent authority: a 'Significance Test', followed if necessary by an Appropriate Assessment which would inform the 'Integrity Test'. The relevant sequence of questions is as follows:

- Step 1: Under Reg. 105(1)(b), consider whether the plan is directly connected with or necessary to the management of the sites. If not, proceed to Step 2.
- Step 2: Under Reg. 105(1)(a) consider whether the plan is likely to have a significant effect on a European site, either alone or in combination with other plans or projects (the 'Significance Test'). If yes, proceed to Step 3.

1.17 [Steps 1 and 2 are undertaken as part of Stage 1: HRA Screening, described in 'typical stages', below.]

- Step 3: Under Reg. 105(1), make an Appropriate Assessment of the implications for the European site in view of its current conservation objectives (the 'Integrity Test'). In so doing, it is mandatory under Reg. 105(2) to consult Natural England, and optional under Reg. 105(3) to take the opinion of the general public.

1.18 [This step is undertaken during Stage 2: Appropriate Assessment, described in 'typical stages', below.]

- Step 4: In accordance with Reg. 105(4), but subject to Reg. 107, give effect to the land use plan only after having ascertained that the plan would not adversely affect the integrity of a European site.

1.19 [This step follows Stage 2 where a finding of ‘no adverse effect’ is concluded. If it cannot be it proceeds to Step 5 as part of Stage 3 of the HRA process]

- Step 5: Under Reg. 107, if Step 4 is unable to rule out adverse effects on the integrity of a European site and no alternative solutions exist then the competent authority may nevertheless agree to the plan or project if it must be carried out for ‘imperative reasons of overriding public interest’ (IROPI).

1.20 [This step is undertaken during Stage 3: Assessment where no alternatives exist and adverse impacts remain taking into account mitigation described in ‘typical stages’, below.]

Typical stages

1.21 The section summarises the stages and associated tasks and outcomes typically involved in carrying out a full HRA of a development plan, based on various guidance documents [\[See reference 10\]](#), [\[See reference 11\]](#), [\[See reference 12\]](#).

1.22 It is normally anticipated that an emphasis on Stages 1 and 2 of this process will, through a series of iterations, help ensure that potential adverse effects are identified and eliminated through the inclusion of mitigation measures designed to avoid or reduce effects. The need to consider alternatives could imply more onerous changes to a plan document. It is generally understood that so called ‘imperative reasons of overriding public interest’ (IROPI) are likely to be justified only very occasionally and would involve engagement with the Government.

Stage 1: HRA Screening

1.23 Tasks at this stage:

- Description of the development plan and confirmation that it is not directly connected with or necessary to the management of European sites.
- Identification of potentially affected European sites and their conservation objectives [\[See reference 13\]](#).
- Assessment of likely significant effects of the development plan alone or in combination with other plans and projects, prior to consideration of avoidance or reduction ('mitigation') measures [\[See reference 14\]](#).

1.24 Outcome of this stage:

- Where effects are unlikely, prepare a 'finding of no significant effect report'.
- Where effects judged likely, or lack of information to prove otherwise, proceed to Stage 2.

Stage 2: Appropriate Assessment

1.25 This stage is undertaken when Stage 1 does not result out likely significant effects.

1.26 Tasks at this stage:

- Information gathering (development plan and European Sites [\[See reference 15\]](#)).
- Impact prediction.
- Evaluation of development plan impacts in view of conservation objectives of European sites.

- Where impacts are considered to directly or indirectly affect qualifying features of European sites, identify how these effects will be avoided or reduced ('mitigation').

1.27 Outcome of this stage:

- Appropriate assessment report describing the plan, European site baseline conditions, the adverse effects of the plan on the European site, how these effects will be avoided or reduced, including the mechanisms and timescale for these mitigation measures.
- If effects remain after all alternatives and mitigation measures have been considered proceed to Stage 3.

Stage 3: Assessment where no alternatives exist and adverse impacts remain taking into account mitigation

1.28 Tasks at this stage:

- Identify 'imperative reasons of overriding public interest' (IROPI).
- Demonstrate no alternatives exist.
- Identify potential compensatory measures.

1.29 Outcome of this stage:

- This stage should be avoided if at all possible. The test of IROPI and the requirements for compensation are extremely onerous.

Case law

1.30 This HRA has been prepared in accordance with relevant case law findings, including most notably the ‘People over Wind’ and ‘Holohan’ rulings from the Court of Justice for the European Union (CJEU).

1.31 The People over Wind, Peter Sweetman v Coillte Teoranta (April 2018) judgment ruled that Article 6(3) of the Habitats Directive should be interpreted as meaning that mitigation measures should be assessed as part of an Appropriate Assessment and should not be taken into account at the screening stage. The precise wording of the ruling is as follows:

“Article 6(3)must be interpreted as meaning that, in order to determine whether it is necessary to carry out, subsequently, an appropriate assessment of the implications, for a site concerned, of a plan or project, it is not appropriate, at the screening stage, to take account of measures intended to avoid or reduce the harmful effects of the plan or project on that site.

1.32 In light of the above, the HRA screening stage does not rely upon avoidance or mitigation measures to draw conclusions as to whether the Local Plan could result in likely significant effects on European sites, with any such measures being considered at the Appropriate Assessment stage as relevant.

1.33 This HRA also fully considers the Holohan v An Bord Pleanala (November 2018) judgement which stated that:

Article 6(3) of Council Directive 92/43/EEC of 21 May 1992 on the conservation of natural habitats and of wild fauna and flora must be interpreted as meaning that an ‘appropriate assessment’ must, on the one hand, catalogue the entirety of habitat types and species for which a site is

protected, and, on the other, identify and examine both the implications of the proposed project for the species present on that site, and for which that site has not been listed, and the implications for habitat types and species to be found outside the boundaries of that site, provided that those implications are liable to affect the conservation objectives of the site.

Article 6(3) of Directive 92/43 must be interpreted as meaning that the competent authority is permitted to grant to a plan or project consent which leaves the developer free to determine subsequently certain parameters relating to the construction phase, such as the location of the construction compound and haul routes, only if that authority is certain that the development consent granted establishes conditions that are strict enough to guarantee that those parameters will not adversely affect the integrity of the site.

Article 6(3) of Directive 92/43 must be interpreted as meaning that, where the competent authority rejects the findings in a scientific expert opinion recommending that additional information be obtained, the ‘appropriate assessment’ must include an explicit and detailed statement of reasons capable of dispelling all reasonable scientific doubt concerning the effects of the work envisaged on the site concerned.

1.34 In undertaking this HRA, LUC has fully considered the potential for effects on species and habitats, including those not listed as qualifying features, to result in secondary effects upon the qualifying features of European sites, including the potential for complex interactions and dependencies. In addition, the potential for offsite impacts, such as through impacts to functionally linked land, and or species and habitats located beyond the boundaries of European site, but which may be important in supporting the ecological processes of the qualifying features, has also been fully considered in this HRA.

1.35 In addition to this, the HRA will take into consideration the ‘Wealden’ judgement and the ‘Dutch Nitrogen Case’ judgements from the Court of Justice for the European Union.

1.36 Wealden District Council v Secretary of State for Communities and Local Government, Lewes District Council and South Downs National Park Authority (2017) ruled that it was not appropriate to scope out the need for a detailed assessment for an individual plan or project based on the annual average daily traffic (AADT) figures detailed in the Design Manual for Roads and Bridges or the critical loads used by Defra or Environmental Agency without considering the in-combination impacts with other plans and projects.

1.37 In light of this judgement, the HRA therefore considers traffic growth based on the effects of development from the Local Plan in combination with other drivers of growth such as development proposed in neighbouring districts and demographic change.

1.38 The 2018 ‘Coöperatie Mobilisation for the Environment and Vereniging Leefmilieu (Dutch Nitrogen)’ judgement stated that:

“May the positive effects of the autonomous decrease in the nitrogen deposition ... be taken into account in the appropriate assessment..., it is important that the autonomous decrease in the nitrogen deposition be monitored and, if it transpires that the decrease is less favourable than had been assumed in the appropriate assessment, that adjustments, if required, be made.”

1.39 The Dutch Nitrogen judgement also states that according to previous case law:

“...it is only when it is sufficiently certain that a measure will make an effective contribution to avoiding harm to the integrity of the site concerned,

by guaranteeing beyond all reasonable doubt that the plan or project at issue will not adversely affect the integrity of that site, that such a measure may be taken into consideration in the 'appropriate assessment' within the meaning of Article 6(3) of the Habitats Directive”.

1.40 The HRA of the Local Plan therefore only considers the existence of conservation and/or preventative measures if the expected benefits of those measures are certain at the time of the assessment. If a threshold approach is applied, it is necessary to consider the risk of significant effects being produced even if below the threshold values to ensure that there is no adverse effect on integrity of the European sites

Previous HRA Work

1.41 HRA of the Local Plan Part 1 was undertaken in 2012 , which assessed the policies and development locations set out in the Core Strategy.

1.42 In 2015, HRA Screening was undertaken for the Pre-Submission Local Plan Part 2: Development Management and Site Allocations, which identified locations for development within Winchester City Council's existing Development Plan. Note that the Development Management and Site Allocations covered the whole of the district, whereas the emerging Local Plan excludes the South Downs National Park area.

1.43 Natural England was consulted on a draft of the HRA Screening report and agreed in 2015 that "none of the policies/allocations in the Draft Local Plan Part 2 are likely to have a significant effect either alone or in combination on the identified European sites; therefore, an Appropriate Assessment is not required”.

1.44 A HRA Scoping Report was then prepared in July 2020, to revisit the information in the 2014 Scoping Report to ensure that data sources were as up to date as possible, to reflect the revised Plan area, and to acknowledge the

latest HRA case law. In particular, the ‘People Over Wind’ judgement, which requires that mitigation is not taken into account during the screening process. Natural England’s comments on the Scoping Report are set out in **Appendix C** and have been taken into account in the scope of the HRA.

Structure of the HRA report

1.45 This chapter has introduced the requirements to undertake the HRA of the Winchester Local Plan. The remainder of the report is structured as follows:

- Chapter 2: The Local Plan summarises the content of the plan that is the subject of this report.
- Chapter 3: HRA Methodology sets out the approach used and the specific tasks undertaken during the screening and Appropriate Assessment stages of the HRA.
- Chapter 4: HRA Screening describes the findings of the screening stage of the HRA.
- Chapter 5: Appropriate Assessment sets out the findings of the Appropriate Assessment stage of the HRA.
- Chapter 6: Conclusions and Next Steps summarises the HRA conclusions for the Local Plan and describes the next steps to be undertaken.

Chapter 2

Winchester Local Plan

2.1 The Winchester Local Plan will cover the period to 2039 and replace the existing Local Plans for Winchester District, excluding areas that fall within the South Downs National Park, which has its own adopted Local Plan.

Content of the Winchester Local Plan

2.2 Strategic Policy (SP1) of the Winchester Local Plan is committed to the delivery of a vision for the District, and its supporting objectives; set out below.

Local Plan Vision

“Winchester District has unique natural, cultural and historic assets which means it is an attractive place to live, work and visit. The challenges of changes to the environment, economy and lifestyles will be met in a positive manner. The natural beauty, biodiversity and cultural heritage will be enhanced. Key assets such as chalk streams and the setting of the national park will be protected.

New development will address the needs of the area and enhance the sustainability of communities, natural environment and the economy and respond to the wider relationship with neighbouring areas. The District will be better placed to adapt, be resilient and mitigate climate change *and help the council to address its climate emergency declaration.*”

2.3 The Vision outlines that development in the area will be delivered in a way which achieves the following:

- The County Town of Winchester will continue to be the cultural and economic centre of the district and a centre for growth. Its high-quality environment will attract new uses, regeneration will make best use of previously developed land and historic assets will be protected and enhanced.
- Areas in the south will continue to grow with significant housing and employment development delivered while protecting natural assets.
- The market towns and rural villages will remain active settlements, accommodate change with modest growth whilst maintaining their individual identity, historic assets and rural character.

Objectives

2.4 The vision for Winchester will be delivered by the application of a number of objectives and policies. The objectives have been developed from the previous adopted Plan, taking into account the revised vision. These are:

- **Tackling the climate emergency and creating a greener district:** This includes the promotion and prioritisation of brownfield land and implementing high quality design, maintaining and enhancing Winchester's valuable environments, ensuring development is designed to provide biodiversity net gain and does not have an adverse impact on the South Downs National Park, provide and enhance green/blue infrastructure, mitigate and adapt to the effects of the climate emergency and maximise the use of low carbon infrastructure and construction methods.
- **Living well:** Aims to promote health, improve air quality, deliver inclusive communities with suitable infrastructure, services and employment, and supporting measures which encourage sustainable and active transport.
- **Homes for all:** Aims to deliver high quality housing to meet local needs.
- **Vibrant local economy:** Aims to ensure the economy is able to grow and respond to the legacy of Covid-19, identify sufficient sites to meet business

needs, support the cultural and visitor economy including Winchester City and the South Downs National Park, and support green growth and a low-carbon economy.

2.5 Alongside setting out the vision, and three general strategic policies for the District, the draft Local Plan is structured into a number of topic chapters which set out topic-specific issues, aims, strategic and non-strategic policies. These are:

- Carbon Neutrality and Low Carbon Infrastructure (7 policies);
- Design (11 policies);
- Sustainable Transport and Active Travel (4 policies);
- Biodiversity and Natural Environment (17 policies);
- Heritage (14 policies);
- Homes for All (18 policies); and
- Vibrant Economy (11 policies).

Quantum of development

2.6 Section 9: 'Homes for All' of the Local Plan makes provision for the development of approximately 15,700 dwelling (net) over the plan period, prioritising suitable previously-developed land within defined settlement boundaries, strategic allocations at Kings Barton (North Winchester), Berewood (West of Waterlooville) and North Whiteley. Housing development will be distributed between:

- Winchester Town (5,770 dwellings);
- South Hampshire Urban Areas (5,700 dwellings); and
- Market Towns and Rural Area (4,240 dwellings, of which 500 to be delivered in South Downs National Park Local Plan area).

2.7 Section 10: ‘Vibrant Economy’ sets out the spatial strategies for economic development in different parts of the plan area. The Employment Land Review has identified a need for 20ha of employment land which will be accommodated by a combination of site allocations, permitting new development and the following spatial approach:

- Within Winchester Town (Bushfield Camp (Policy W3) – About 20ha of new employment land; Winnall (Policy W4); Station Approach Road (Policy W6); and Central Winchester Regeneration Scheme (Policy W5)).
- South Hampshire Urban Area (Continued development of Solent Business Park (Policy SH4), West of Waterlooville (Policy SH1) and Little Park Farm (Policy SH5)); and,
- Market Towns and Rural Areas (Appropriate growth and maintenance of existing employment within the key settlement set out in SP).

Allocated sites

2.8 The following allocated sites have been assessed in this HRA.

Table 2.1: Allocated sites

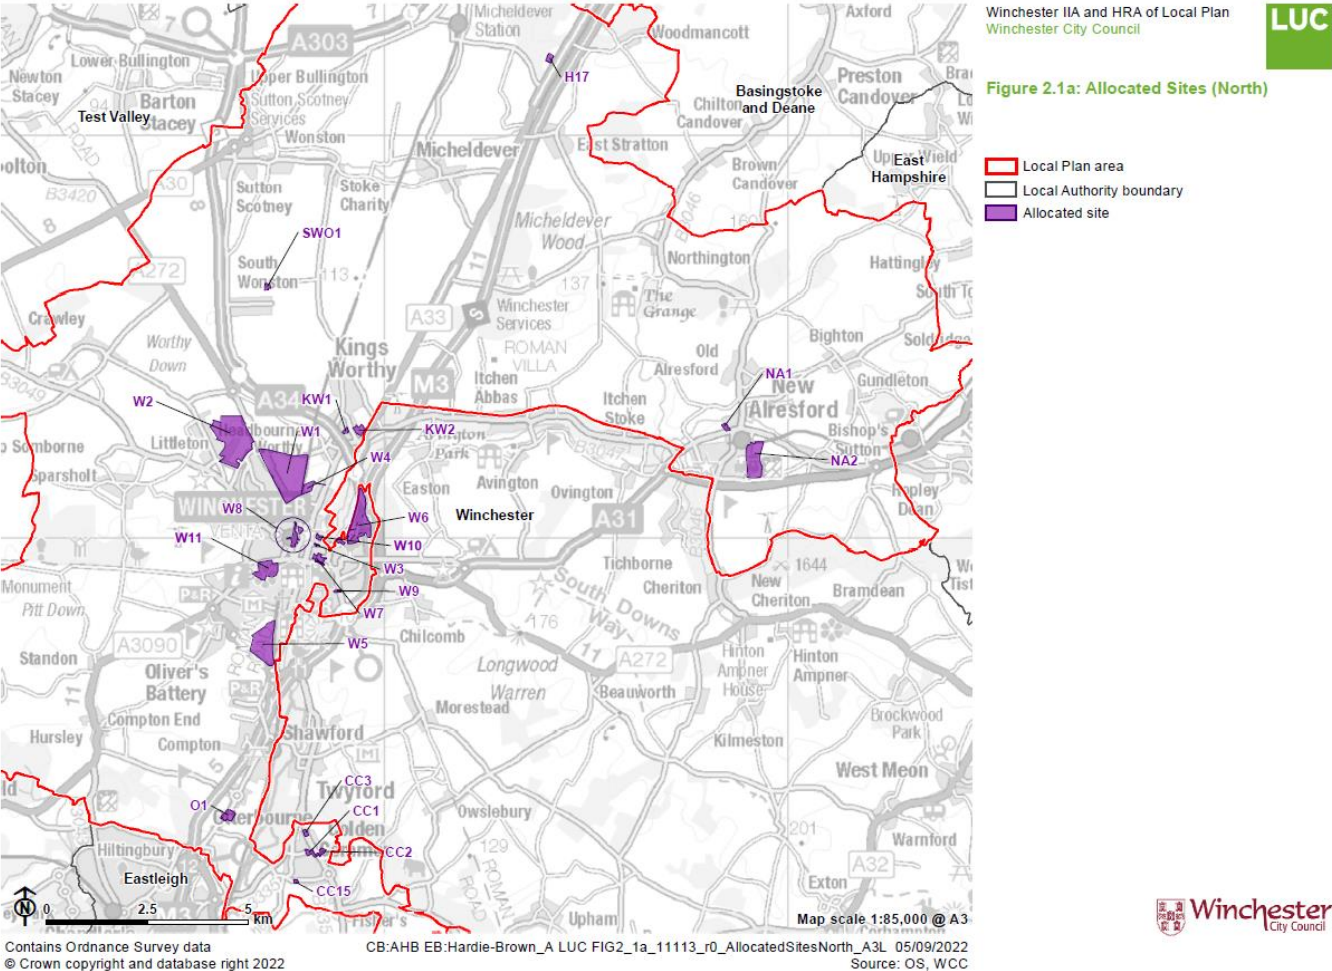

Policy reference	Site name	Type of site (main uses)
BW1	The Vineyard/Tangier Lane	Residential
BW2	Albany Farm	Residential
BW3	Tollgate Sawmill	Residential
BW4	Land north of Rareridge Lane	Residential
CC1	Clayfield	Residential
CC2	Colden Common Farm, 99 Main Road	Residential
CC3	Land at Main Road	Residential

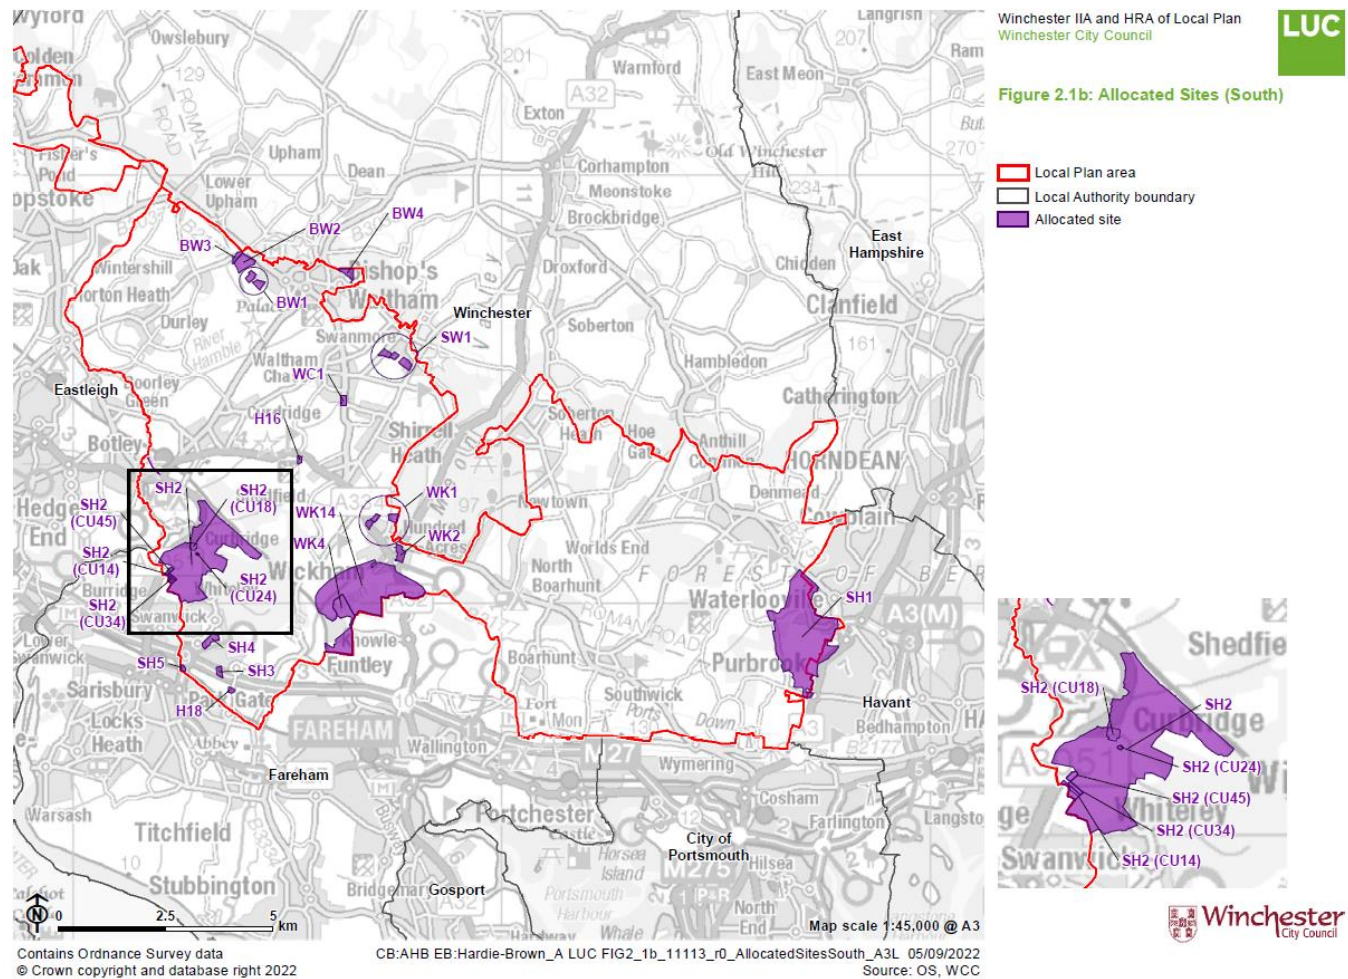

Policy reference	Site name	Type of site (main uses)
CC4	Land adjoining 85 Church Lane	Residential
H16	The Nurseries	Residential
H17	Carousel Park	Residential
H18	Tynefield	Residential
KW1	Cornerways and Merrydale, Church Lane, Kings Worthy	Residential
KW2	Land adj Cart and Horses PH	Residential
NA1	The Dean	Residential
NA2	Sun Lane	Residential Employment Burial ground
O1	Land Off main Road Otterbourne	Residential
SH1	West of Waterlooville Newlands	Residential Employment
SH2	North Whiteley	Residential
SH2 CU14)	Land off Whiteley Lane C	Residential
SH2 (CU18)	Land at Ridge Farm Lane	Residential
SH2 (CU24)	Buckswood Cottage, Ridge Lane	Residential
SH2 (CU34)	Land off Whiteley Lane D	Residential
SH2 (CU45)	Land off Whiteley Lane D	Residential
SH3	Whiteley Green	Residential
SH4	Solent 1 Business Park	Employment
SH5	Little Park Farm	Employment
SH6	Botley Bypass	Transport
SW1	The Lakes	Residential

Policy reference	Site name	Type of site (main uses)
SWO1	Land at West Hill Road North	Residential
W1	Barton Farm	Residential Employment Transport
W2	Sir John Moor Barracks	Residential Employment Transport
W3	St Peter's Car Park	Residential
W4	Land off Courtenay Road	Residential
W5	Bushfield	Employment
W6	Winnall	Employment
W7	Central Winchester Regeneration	Residential Employment
W8	Station Approach	Employment Transport
W9	Bar End Road Winchester	Residential Employment
W10	River Park Leisure Centre	Education Residential
W11	University Area	Education Residential
WC1	Morgans Yard	Education Residential Employment
WK1	Winchester Road	Residential
WK2	The Glebe	Residential

Policy reference	Site name	Type of site (main uses)
WK4	Land North of Ravenswood House Hospital Wickham	Residential Agriculture

Figure 2.1: Allocated sites

Chapter 3

Approach to the HRA

3.1 This chapter describes the method that has been taken in the HRA of the Local Plan throughout its development including the specific tasks that have been undertaken and the assumptions that underpin the HRA judgements made.

Screening assessment

3.2 HRA Screening of the plan has been undertaken in line with current available guidance and seeks to meet the requirements of the Habitats Regulations. The tasks that have been undertaken during the screening stage of the HRA and the conclusions reached are described in detail below.

3.3 The purpose of the screening stage is to:

- Identify all aspects of the plan which would have no effect on a European site, so that they can be eliminated from further consideration in respect of this and other plans;
- Identify all aspects of the plan which would not be likely to have a significant effect on a European site (i.e. would have some effect, because of links/connectivity, but which are not significant), either alone or in combination with other aspects of the same plan or other plans or projects, which therefore do not require 'appropriate assessment'; and
- Identify those aspects of the plan where it is not possible to rule out the risk of significant effects on a European site, either alone or in combination with other plans or projects. This provides a clear scope for the parts of the plan that will require appropriate assessment.

Identification of European sites that may be affected by the Plan

3.4 In order to initiate the search of European sites that could potentially be affected by the Local Plan, it is established practice in HRAs to consider European sites within the local planning authority area covered by a plan, and also within a buffer distance from the boundary of the plan area.

3.5 A distance of 15km has been used as a starting point to identify European sites likely to be affected by impacts relating to development within the Plan area. In addition to this, consideration has also been given to European sites connected to the plan area beyond this distance, for example through hydrological pathways or emissions from major roads.

3.6 Impacts from development in areas outside of the European site boundaries may also occur where habitat contributes towards maintaining the interest feature for which the European site is designated (known as 'functionally linked land'). This includes land which may provide offsite foraging and roosting habitat for birds.

3.7 European sites within 15km of the Plan area are set out below and shown on Error! Reference source not found.. Further information on each site is set out **Appendix A**. No sites beyond 15km are considered to have connectivity to the Plan area.

3.8 European sites within the Plan area:

- River Itchen SAC;
- Solent & Southampton Water SPA/Ramsar; and
- Solent Maritime SAC.

3.9 Natural England has also indicated (see Appendix C) that the River Meon is being considered as a proposed SAC (pSAC) for Atlantic Salmon. A site

boundary is not yet available for this site, but the River Meon passes through the Plan area.

3.10 European sites within 5km of the Plan area:

- Chichester & Langstone Harbours SPA/Ramsar (c.2.3km away);
- Emer Bog SAC (c.2.4km away);
- Portsmouth Harbour SPA (c.1.2km away);
- Solent & Dorset Coast SPA (c.1.2km away); and
- Solent & Isle of Wight Lagoons SAC (c.3.0km away).

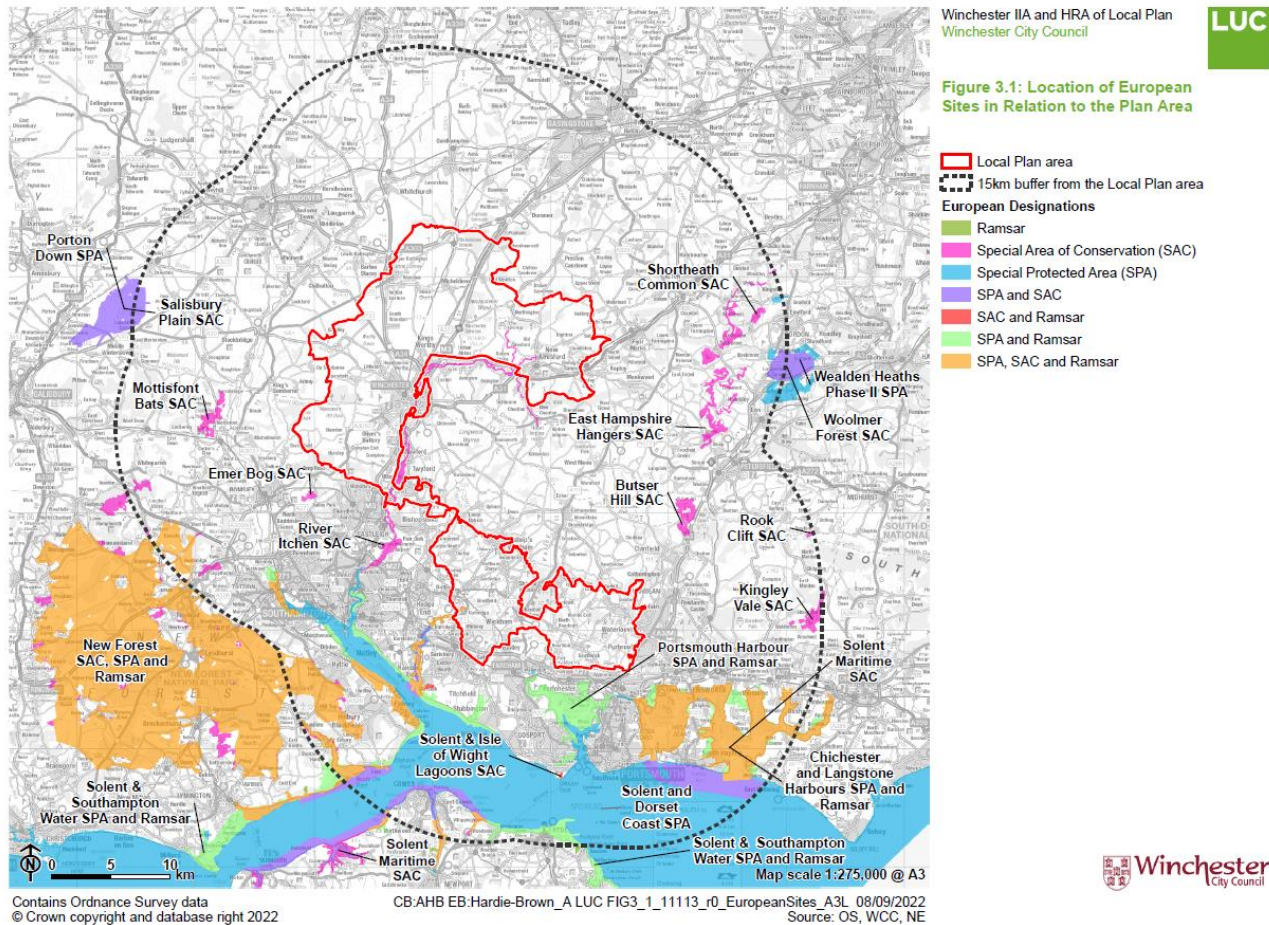

3.11 European sites within 10km of the Plan area:

- Butser Hill SAC (c.5.3km away);
- East Hampshire Hangers SAC (c.7.9km away); and
- Mottisfont Bats SAC (c.6.0km away).

3.12 European sites within 15km of the Plan area:

- Kingley Vale SAC (c.12.3km away);
- New Forest SAC/SPA/ Ramsar (c.10.5km away);
- Porton Down SPA (c.14.0km away);
- Rook Clift SAC (c.14.4km away);
- Salisbury Plain SAC (c.14.0km away);
- Shortheath Common SAC (c.12.0km away);
- Wealden Heaths Phase 2 SPA (c.14.2km away); and
- Woolmer Forest SAC (c.13.6km away).

Figure 3.1: Location of European sites in relation to the Plan area

3.13 The designated features and conservation objectives of the European sites, together with current pressures and potential threats, was established using Data Forms for SACs and SPAs [See reference 16] and Information Sheets for Ramsar Wetlands published on the JNCC website [See reference 17], as well as Natural England's Site Improvement Plans [See reference 18], Supplementary Advice Notes [See reference 19] and the most recent conservation objectives published on the Natural England website [See reference 20]). This analysis enabled European site interest features to be identified, along with the features of each European site which determine site integrity and the specific sensitivities and threats facing the site. This information was then used to inform an assessment of how the potential impacts of the Local Plan may result in likely significant effects on each of the European sites in question, either alone or in-combination.

Functionally linked land (FLL)

3.14 The term 'functional linkage' can be used to refer to the role or 'function' that land beyond the boundary of a European site might fulfil in terms of supporting the populations for which the site was designated or classified. Such an area is therefore 'linked' to the site in question because it provides a (potentially important) role in maintaining or restoring a protected population at favourable conservation status.

3.15 Whilst the boundary of a European site will usually be drawn to include key supporting habitat for a qualifying species, this cannot always be the case where the population for which a site is designated or classified is particularly mobile. Individuals of the population will not necessarily remain in the site all the time. Sometimes, the mobility of qualifying species is considerable and may extend so far from the key habitat that forms the SAC or SPA that it would be entirely impractical to attempt to designate or classify all of the land or sea that may conceivably be used by the species.

3.16 Damage or loss of off-site habitat (i.e. land outside European sites that is functionally linked as it may be used by the qualifying species of a site) is more likely to be an issue for highly mobile species, particularly birds and bats. The potential for FLL within the Plan area has therefore been considered for all European sites with mobile qualifying species.

Assessment of ‘likely significant effect’

3.17 As required under Regulation 105 of The Conservation of Habitats and Species Regulations 2017 [\[See reference 21\]](#) (as amended) (the ‘Habitats Regulations’), an assessment has been undertaken of the ‘likely significant effects’ of the Plan. The assessment has been prepared in order to identify which policies or site allocations would be likely to have a significant effect on European sites.

3.18 Consideration has been given to the potential for the development proposed to result in significant effects associated with:

- Physical loss of/damage to habitat;
- Non-physical disturbance (noise, vibration and light);
- Non-toxic contamination;
- Air pollution;
- Recreation pressure; and
- Changes to hydrology including water quality and quantity.

3.19 A risk-based approach involving the application of the precautionary principle is adopted in the assessment, such that a conclusion of ‘no significant effect’ has only been reached where it is considered very unlikely, based on current knowledge and the information available, that a proposal in the Local Plan would have a significant effect on the integrity of a European site.

Interpretation of ‘Likely Significant Effect’

3.20 Relevant case law helps to interpret when effects should be considered as a Likely Significant Effect (LSE), when carrying out HRA of a land use plan.

3.21 In the Waddenzee case [\[See reference 22\]](#), the European Court of Justice ruled on the interpretation of Article 6(3) of the Habitats Directive (translated into Reg. 102 in the Habitats Regulations), including that:

3.22 An effect should be considered ‘likely’, “if it cannot be excluded, on the basis of objective information, that it will have a significant effect on the site” (para 44). An effect should be considered ‘significant’, “if it undermines the conservation objectives” (para 48). Where a plan or project has an effect on a site “but is not likely to undermine its conservation objectives, it cannot be considered likely to have a significant effect on the site concerned” (para 47).

3.23 An opinion delivered to the Court of Justice of the European Union [\[See reference 23\]](#) commented that:

“The requirement that an effect in question be ‘significant’ exists in order to lay down a de minimis threshold. Plans or projects that have no appreciable effect on the site are thereby excluded. If all plans or projects capable of having any effect whatsoever on the site were to be caught by Article 6(3), activities on or near the site would risk being impossible by reason of legislative overkill.”

3.24 This opinion (the ‘Sweetman’ case) therefore allows for the authorisation of plans and projects whose possible effects, alone or in combination, can be considered ‘trivial’ or de minimis; referring to such cases as those “which have no appreciable effect on the site”. In practice such effects could be screened out as having no Likely Significant Effect; they would be ‘insignificant’.

3.25 The HRA screening assessment therefore considers whether the Local Plan policies could have likely significant effects either alone or in combination.

In-combination effects

3.26 Regulation 105 of the Habitats Regulations 2017 requires an Appropriate Assessment where “a land use plan is likely to have a significant effect on a European site (either alone or in combination with other plans or projects) and is not directly connected with or necessary to the management of the site”. Therefore, it will be necessary to consider whether any impacts identified from the Local Plan may combine with other plans or projects to give rise to significant effects in-combination.

3.27 Where the Local Plan is likely to have an effect on its own e.g. due to water pollution (due to impact pathways being present), but it is not likely to be significant, the in-combination assessment at Screening stage needs to determine whether there may also be the same types of effect from other plans or projects that could combine with the Local Plan to produce a significant effect. If so, this likely significant effect (e.g. water pollution) arising from the Local Plan in combination with other plans or projects, would then need to be considered through the Appropriate Assessment stage to determine if water pollution would have an adverse effect on integrity of the relevant European site. Where the screening assessment has concluded that there is no impact pathway between development proposed in the Local Plan and the conditions necessary to maintain qualifying features of a European site, then there will be no in-combination effects to assess at the Screening or Appropriate Assessment stage. This approach accords with recent guidance on HRA in the HRA Handbook [\[See reference 24\]](#).

3.28 If impact pathways are found to exist for a particular effect but it is not likely to be significant from the Local Plan alone, the in-combination assessment will identify which other plans and programmes could result in the same impact on the same European site. This will focus on planned growth (including housing, employment, transport, minerals and waste) around the affected site,

or along the impact corridor, for example, if impacts could arise as a result of changes to a waterway, then planned growth in local authorities along that waterway will be considered.

3.29 The potential for in-combination impacts will therefore focus on plans prepared by local authorities that overlap with European sites that are within the scope of this HRA. The findings of any associated HRA work for those plans will be reviewed where available. Where relevant, any strategic projects in the area that could have in-combination effects with the Local Plan will also be identified and reviewed.

3.30 The online HRA Handbook suggests the following plans and projects may be relevant to consider as part of the in-combination assessment:

- Applications lodged but not yet determined, including refusals subject to an outstanding appeal or legal challenge;
- Projects subject to periodic review e.g. annual licences, during the time that their renewal is under consideration;
- Projects authorised but not yet started'
- Projects started but not yet completed;
- Known projects that do not require external authorisation;
- Proposals in adopted plans;
- Proposals in draft plans formally published or submitted for final consultation, examination or adoption.

3.31 The need for in-combination assessment also arises at the Appropriate Assessment stage, as discussed in the Appropriate Assessment section below.

Screening assessment

3.32 A screening matrix has been prepared (**Appendix B**), which considers the potential for likely significant effects resulting from each policy in the Local Plan,

and the site allocations that may contribute to each type of impact. For each policy and site allocation, the screening assessment concludes either that likely significant effects can be ruled out (no Appropriate Assessment required) or that they cannot be ruled out (Appropriate Assessment required). The screening assessment is conducted without taking mitigation (e.g. embedded in policy) into account, in accordance with the 'People over Wind' judgment.

3.33 For some types of impacts, the potential for likely significant effects has been determined on a proximity basis, using GIS data to determine the proximity of potential development locations to the European sites that are the subject of the assessment. However, there are many uncertainties associated with using set distances as there are very few standards available as a guide to how far impacts will travel. Therefore, where assumptions have been made, these are set out in **Chapter 4**.

Appropriate Assessment methodology

3.34 Following the screening stage, if likely significant effects on European sites are unable to be ruled out, the plan-making authority is required under Regulation 105 of the Habitats Regulations 2017 to make an 'Appropriate Assessment' of the implications of the plan for European sites, in view of their conservation objectives. EC Guidance [\[See reference 25\]](#) states that the Appropriate Assessment should consider the impacts of the plan (either alone or in combination with other projects or plans) on the integrity of European sites with respect to their conservation objectives and to their structure and function.

3.35 Unlike the Screening stage, Appropriate Assessment can take into account mitigation, for example as proposed within Local Plan policies.

Assessing the effects on site integrity

3.36 A site's integrity depends on it being able to sustain its 'qualifying features' (i.e. the habitats and species for which it has been designated) and to ensure

their continued viability. The Holohan judgement also clarifies that the effects on species and habitats not listed as qualifying features, but which could result in secondary effects upon the qualifying features of European sites also need to be considered. The Appropriate Assessment, if required, will refer the information set out in **Appendix A** of this report, to consider the characteristics of supporting habitats and species that could be affected by impacts identified at the screening stage.

3.37 A high degree of integrity at a site is considered to exist where the potential to meet a site's conservation objectives is realised and where the site is capable of self-repair and renewal with a minimum of external management support.

3.38 A conclusion needs to be reached as to whether or not the Local Plan would adversely affect the integrity of a European site. Assessing the effects on the site(s) integrity involves considering whether the predicted impacts of the Local Plan policies and/or sites (either alone or in combination) have the potential to:

- Cause delays to the achievement of conservation objectives for the site.
- Interrupt progress towards the achievement of conservation objectives for the site.
- Disrupt those factors that help to maintain the favourable conditions of the site.
- Interfere with the balance, distribution and density of key species that are the indicators of the favourable condition of the site.
- Cause changes to the vital defining aspects (e.g. nutrient balance) that determine how the site functions as a habitat or ecosystem.
- Change the dynamics of relationships that define the structure or function of the site (e.g. relationships between soil and water, or animals and plants).
- Interfere with anticipated natural changes to the site.
- Reduce the extent of key habitats or the population of key species.

- Reduce the diversity of the site.
- Result in disturbance that could affect the population, density or balance between key species.
- Result in fragmentation.
- Result in the loss of key features.

3.39 The conservation objectives for each SAC and SPA (**Appendix A**) are generally to maintain the qualifying features in favourable condition. Natural England does not define conservation objectives for Ramsar sites but these can often be inferred from those for co-located SAC or SPA features. The Site Improvement Plans for each site provide a high level overview of the issues (both current and predicted) affecting the condition of the designated features on the site(s) and outline the priority measures required to improve the condition of the features. An Appropriate Assessment draws on these to help to understand what is needed to maintain the integrity of the European sites.

3.40 For each European site where an uncertain or likely significant effect is identified in relation to the Local Plan, the potential impacts will be set out and judgements made (based on the information available) regarding whether the impact will have an adverse effect on the integrity of the site. A further in-combination assessment will need to be carried out for any likely significant effects identified where following Appropriate Assessment it is considered that the Local Plan will not on its own adversely affect the integrity of the European site. This will be undertaken in the same way as described above under the Screening stage drawing on information regarding the same types of relevant plans or projects referred to above. Consideration will be given to the potential for mitigation measures to be implemented that could reduce the likelihood or severity of the potential impacts such that there would not be an adverse effect on the integrity of the site.

Chapter 4

HRA Screening

4.1 The HRA screening of the Local Plan has determined that Appropriate Assessment is required, as likely significant effects from the plan's policies cannot be ruled out through screening. The reasoning for this is presented below.

4.2 Appendix B sets out the screening of each policy in the Plan, and this chapter summarises the findings of that process.

Physical damage and loss of habitat

4.3 Any development resulting from the Local Plan would take place within the Plan area; therefore only European sites (or functionally-linked habitats) within Winchester District but outside the South Downs National Park could be affected through physical damage or loss of habitat from within the site boundaries. Only the River Itchen SAC and a small part of the Solent & Southampton Water SPA/Ramsar and Solent Maritime SAC are within the Plan area; it is likely that a small part of the River Meon pSAC would also be within the Plan area.

4.4 Habitat loss from development in areas outside of the European site boundaries may also result in likely significant effects where that habitat contributes towards maintaining the interest feature for which the European site is designated. This includes land which may provide offsite foraging or roosting habitat for birds or bats, and spawning grounds for fish.

4.5 None of the allocated sites are within a European site, although W6 is adjacent to the River Itchen SAC and SH2 is adjacent to Solent & Southampton Water SPA/Ramsar; these therefore have the potential to indirectly damage

habitat within the European sites. The site allocations in Wickham (WK prefix) may also be adjacent to the River Meon pSAC.

4.6 The following policies also permit development in locations other than allocated and sites and could therefore, in theory, permit development within a European site:

- Policy SP3: Development in the countryside;
- Policy CN5: Renewable and low carbon energy schemes;
- Policy CN6: Micro energy generation schemes;
- Policy CN7: Energy storage development;
- Policy NE12: Equestrian development;
- Policy NE13: Leisure and recreation in the countryside;
- Policy H1: Housing provision;
- Policy H4: Development within settlements;
- Policy H9: Purpose built student accommodation;
- Policy H12: Provision for Gypsies, Travellers and Travelling Showpeople;
- Policy E11: Visitor-related development within the countryside.

4.7 As these policies permit development outside of allocated sites, they could also result in development within habitat within the Plan area that is functionally linked to European sites.

Functionally linked land (FLL) within the Plan area

4.8 The following European sites within 15km of the Plan area support mobile species and therefore could rely on FLL:

- Mottisfont Bats SAC: Barbastelle bats.

- River Itchen SAC (southern damselfly; white-clawed (or Atlantic stream) crayfish; brook lamprey; Atlantic salmon; bullhead; and otter).
- New Forest SAC / SPA / Ramsar (SAC: southern damselfly; stag beetle; great crested newt. SPA: European honey-buzzard, Eurasian hobby, European nightjar, woodlark, Dartford warbler, wood warbler; hen harrier).
- Wealden Heaths Phase 2 SPA (European nightjar, woodlark, Dartford warbler).
- Porton Down SAC (stone curlew).
- Chichester & Langstone Harbours SPA / Ramsar (black-tailed godwit [Ramsar only]; sandwich tern; common tern; little tern; dark-bellied brent goose; common shelduck; Eurasian wigeon; Eurasian teal; northern pintail; northern shoveler; red-breasted merganser; ringed plover; grey plover; sanderling; dunlin; bar-tailed godwit; Eurasian curlew; common redshank; ruddy turnstone; and its water bird assemblage).
- Portsmouth Harbour SPA / Ramsar (dark-bellied brent goose; red-breasted merganser; dunlin; black-tailed godwit).
- Solent & Dorset Coast SPA (sandwich tern; common tern; little tern).
- Solent & Southampton Water SPA / Ramsar (Mediterranean gull sandwich tern roseate tern common tern little tern; dark-bellied brent goose; Eurasian teal; ringed plover; black-tailed godwit; and its waterbird assemblage).

4.9 The River Meon pSAC, if designated, would be for Atlantic Salmon, which also make use of FLL.

Mammals

4.10 The qualifying features at Mottisfont Bats SAC are Barbastelle bats. There is evidence that the home range of Barbastelle bats is 1-20km [See reference 26]; however this evidence also states that their core foraging areas are likely to lie within a much smaller range and that 7km is a suitable distance for targeting

the protection of foraging habitats. Mottisfont Bats SAC is c.6km from the Plan area at its nearest point. While the home range of individuals may extend into the Plan area, their level of dependence on habitats beyond 7km is likely to be low. Within 7km of the SAC and within the Plan area (ie near to Upper Slackstead), there are no areas of habitat affected by the Plan that are capable of representing important functional linkages to the SAC. Therefore, effects on FLL in relation to Barbastelle bats at Mottisfont Bats SAC do not need to be considered in the HRA.

4.11 Otter are a qualifying feature of the River Itchen SAC. Otter home ranges can occupy extensive areas and linear distances, and therefore the population of otter for which the River Itchen SAC is designated is likely to utilise, and depend upon, the availability and connectivity of suitable riparian and wetland habitat in the wider region, including smaller watercourses and field drains. As a result, there is potential for FLL within the Plan area that may be affected by the Local Plan.

Invertebrates

4.12 Southern damselfly is a qualifying feature at both River Itchen SAC and New Forest SAC. Southern damselfly have very specialised habitat requirements, making use of “shallow, well-vegetated, base-rich runnels and flushes in open areas or small side-channels of chalk rivers. Most sites are on wet heath.” [\[See reference 27\]](#); ie rivers and wet heathland immediately adjacent to them. New Forest SAC is c.10.5km away; therefore habitats associated with the metapopulation of damselfly in the New Forest will not be within the Plan area. River Itchen SAC is within the Plan area, but in the south of the Plan area, habitats that support southern damselfly form part of the SAC designation. There are areas of lowland fens outside the SAC in Winchester town, but these are within the South Downs National Park. Lowland fens around New Alresford, however, fall outside the SAC and could be functionally linked to it. Therefore effects on FLL within the Plan area need to be considered in relation to southern damselfly.

4.13 Stag beetle are a qualifying feature at New Forest SAC. Stag beetles may travel outside of the SAC boundaries, although it is unlikely that they will travel far (it is generally only the male stag beetle that flies during the summer months, and the female beetle rarely flies) [See reference 28]. Research [See reference 29] suggests that 2km may be an appropriate buffer inside which sites could be functionally connected, as this is the distance that male stag beetles travel to females during the breeding season. New Forest SAC is c.11km outside the Plan area; therefore effects on FLL within the Plan area do not need to be considered in relation to stag beetle.

4.14 Atlantic stream (white clawed) crayfish are a qualifying feature of the River Itchen SAC. Crayfish make use of habitats within and immediately adjacent to the waterbodies they live in [See reference 30]. As the whole of the River Itchen in Winchester is designated SAC, there are no areas of habitat outside of the SAC boundary that crayfish would need to rely on; therefore effects on FLL within the Plan area do not need to be considered in relation to crayfish.

Amphibians

4.15 Great crested newts are a qualifying feature at New Forest SAC. Great crested newt typically inhabit the land within 500m of their breeding ponds and are known to only travel up to 2km from their breeding ponds. New Forest SAC is c.11km outside the Plan area; therefore effects on FLL within the Plan area do not need to be considered in relation to great crested newts.

Fish

4.16 Brook lamprey, Atlantic salmon and bullhead are qualifying features of the River Itchen SAC. Atlantic salmon are also a feature of the River Meon pSAC.

4.17 Brook lamprey and bullhead are not migratory species and therefore rely entirely on habitats within the River Itchen. As the whole of the River Itchen in Winchester is designated SAC, there are no areas of habitat outside of the SAC

boundary that crayfish would need to rely on; therefore effects on FLL within the Plan area do not need to be considered in relation to brook lamprey or bullhead.

4.18 Atlantic salmon spawn, and live as juveniles, in rivers such as the Itchen and Meon and then migrate to sea. The River Itchen SAC therefore has functional links to Southampton water and beyond, but all of the supporting habitat within the Plan area is within the SAC. The same is likely to be true of the River Meon pSAC. Therefore, effects on FLL within the Plan area do not need to be considered in relation to Atlantic salmon.

Birds

4.19 Birds have varying ranges depending on the species and therefore need to be considered on a species by species and site by site basis.

Heathland and woodland bird species

4.20 Stone curlew is a qualifying species at Porton Down SAC. A distance of 1.5km has been used to identify areas of potential FLL at other sites [See reference 31]. As Porton Down SAC is c.14km from the Plan area, this is considered well beyond the area in which FLL could occur. FLL within the Plan area therefore does not need to be considered in relation to stone curlew.

4.21 Nightjar, woodlark and Dartford warbler are qualifying species at both New Forest SPA/Ramsar and Wealden Heaths Phase 2 SPA. These species make use of areas that have a patchwork of heathland, grassland and woodland (particularly coppiced or other rotationally managed woodland, which creates clearings in which nightjar and woodlark can nest). Both of the European sites for which these species are designated have large areas of lowland heathland interspersed with areas of woodland, something which does not occur within the Plan area [See reference 32]. It is therefore considered very unlikely that FLL associated with these species from either European site would be found within

the Plan area. FLL within the Plan area therefore does not need to be considered in relation to nightjar, woodlark or Dartford warbler.

4.22 European honey buzzard and Eurasian hobby are also qualifying species at New Forest SPA/Ramsar. Honey buzzards are considered to have a foraging range of c.4km [See reference 33] and hobby of up to 6.5km [See reference 34]. Hobby typically like open habitats with lots of prey (e.g. dragonflies and smaller birds) and are often found over large bodies of water. They are likely to breed within the Plan area, although the habitats present are unlikely to provide an important role in maintaining the population for which the New Forest SPA/Ramsar, which is c.11km outside the Plan area, is designated. Honey Buzzard may breed in some of the larger woodlands within Winchester (e.g. Micheldever) but again, these individuals would be rare and considered as separate populations to the SAC, so the Plan area is unlikely to be important in supporting this population. Therefore effects on FLL within the Plan area do not need to be considered in relation to European honey buzzard or Eurasian hobby.

Water birds

4.23 Chichester & Langstone Harbours SPA / Ramsar, Portsmouth Harbour SPA / Ramsar, Solent & Dorset Coast SPA, and Solent & Southampton Water SPA / Ramsar are all around Southampton Water and the Solent, and are designated for their waterbird populations.

4.24 The species that are the sites' qualifying features rely on the intertidal and marine habitats within the designated sites, but also make use of habitats outside the designated areas. As part of the preparation of the Solent Waders and Brent Goose Strategy [See reference 35], the core and supporting habitats for wildfowl and wading birds was mapped. This shows that functionally linked land for the Solent SPA / Ramsar sites occurs close to (within 2km) of the coast and estuaries, ie mostly outside the Plan area, although one area identified as a 'primary support area', close to the River Hamble, is within the Plan area.

4.25 Therefore, effects on FLL within the Plan area do not need to be considered in relation to SPA / Ramsar waterbirds.

FLL relevant to physical damage and loss of habitat

4.26 As set out above, most of the European sites with mobile qualifying species do not rely on FLL within the Plan area. The following do, and will be considered further within the HRA:

- River Itchen SAC: Otter may use riparian and wetland habitat beyond the SAC boundary.
- Coastal SPA/Ramsar sites: birds may use suitable habitats e.g. wetland within 2km of the SPA/Ramsar sites. Within the Plan area, these are only around the River Hamble (associated with Solent & Southampton Water SPA/Ramsar).

4.27 Two areas within SH2 were surveyed as potential FLL associated with the coastal SPA/Ramsar sites and both were identified as 'low use site' as part of the Solent Waders and Brent Goose Strategy work. Further allocations may be present in areas of FLL that have not yet been surveyed/identified, e.g. other sites close to the River Hamble linked to the coastal SPA/Ramsar sites, or riparian/wetland habitat associated with the River Itchen SAC.

4.28 All of the policies listed in paragraph 4.5 could also in theory result in development in areas of FLL associated with the River Itchen SAC or coastal SPA/Ramsar sites.

4.29 There is potential for likely significant effects to occur in relation to physical damage and loss of habitat at River Itchen SAC, Solent & Southampton Water SPA/Ramsar or Solent Maritime SAC; or at functionally linked land associated with River Itchen SAC or Solent & Southampton Water SPA/Ramsar. This therefore requires further consideration at Appropriate Assessment.

Fragmentation and severance

4.30 Fragmentation and severance may be caused by physical loss of habitats, but may also be caused by development that impedes the movement of species between two areas of habitat, for example new roads or brightly lit areas.

4.31 Only European sites or FLL within the Plan area could be affected by fragmentation and severance arising from the Local Plan. As noted above, only the River Itchen SAC, a small part of the Solent & Southampton Water SPA/Ramsar and Solent Maritime SAC and River Meon pSAC are within the Plan area. Fragmentation or severance affecting the qualifying features of the River Itchen SAC could be caused by physical loss of or damage to the river habitats within or upstream of the European site, or between the SAC and other water bodies or FLL, e.g. through habitat loss or non-physical disturbance. Fragmentation / severance will therefore be considered in relation to loss/damage of habitat and non-physical disturbance.

4.32 Fragmentation or severance affecting the Solent & Southampton Water SPA/Ramsar would involve physical loss of or damage to SPA/Ramsar habitats or disturbance between FLL. These are assessed in relation to physical loss/damage or habitat, non-physical disturbance, and recreation disturbance; fragmentation and severance will therefore not be considered as a separate effect.

4.33 Effects relating to fragmentation and severance will be considered in relation to loss/damage of habitat, non-physical disturbance and/or recreation pressure; and not assessed as a separate effect.

Non-physical disturbance

4.34 Noise and vibration effects, e.g. during the construction of new housing or employment development, are most likely to disturb bird species and are thus a key consideration with respect to European sites where birds are the qualifying

features. Artificial lighting at night (e.g. from street lamps, flood lighting and security lights) has the potential to affect species where it occurs in close proximity to key habitat areas, such as key roosting sites of SPA birds.

4.35 It has been assumed (on a precautionary basis and based on our experience of previous HRAs and consultation with Natural England) that the effects of noise, vibration and light pollution are capable of causing an adverse effect if development takes place within 500 metres of a European site with qualifying features sensitive to these disturbances.

4.36 Scoped in European sites that support qualifying species which are vulnerable to non-physical disturbance are the River Itchen SAC (and its FLL) and Solent & Southampton Water SPA/Ramsar.

4.37 The following site allocations are within 500m of these sites (or FLL):

- River Itchen SAC (and its FLL): KW1, KW2, NA1, W3, W4, W5, W6, W7, W9, W10, CC3.
- Solent & Southampton Water SPA/Ramsar (and its FLL): SH2 (including subsites CU18, CU24, CU34 and CU45)

4.38 The following policies also permit development outside of the allocated sites that could in theory be within 500m of a European site or FLL:

- Policy SP3: Development in the countryside;
- Policy CN5: Renewable and low carbon energy schemes;
- Policy CN6: Micro energy generation schemes;
- Policy CN7: Energy storage development;
- Policy NE12: Equestrian development;
- Policy NE13: Leisure and recreation in the countryside;
- Policy H1: Housing provision;
- Policy H4: Development within settlements;

- Policy H9: Purpose built student accommodation;
- Policy H12: Provision for Gypsies, Travellers and Travelling Showpeople;
- Policy E4: Retail and main town centre uses;
- Policy E8: Local shops, services and facilities;
- Policy E9: Economic development in the rural area; and
- Policy E11: Visitor-related development within the countryside.

4.39 There is potential for likely significant effects to occur in relation to non-physical disturbance at River Itchen SAC, Solent & Southampton Water SPA/Ramsar; or at functionally linked land associated with these. This therefore requires further consideration at Appropriate Assessment.

Air pollution

4.40 Air pollution is most likely to affect European sites where plant, soil and water habitats are the qualifying features, but some qualifying animal species may also be affected, either directly or indirectly, by deterioration in habitat as a result of air pollution. Deposition of pollutants to the ground and vegetation can alter the characteristics of the soil, affecting the pH and nitrogen levels, which can then affect plant health, productivity and species composition.

4.41 In terms of vehicle traffic, nitrogen oxides (NO_x, i.e. NO and NO₂) are considered to be the key pollutants. Deposition of nitrogen compounds may lead to both soil and freshwater acidification, and NO_x can cause eutrophication of soils and water.

4.42 Based on the Highways Agency Design Manual for Road and Bridges (DMRB) guidance document LA105 Air Quality [\[See reference 36\]](#) (which was produced to provide advice regarding the design, assessment and operation of trunk roads including motorways), it is assumed that air pollution from roads is unlikely to be significant beyond 200m from the road itself. Where increases in

traffic volumes are forecast, this 200m buffer needs to be applied to the relevant roads in order to make a judgement about the likely geographical extent of air pollution impacts.

4.43 The DMRB Guidance for the assessment of local air quality in relation to highways developments provides criteria that should be applied at the Screening Stage of an assessment of a plan or project, to ascertain whether there are likely to be significant impacts associated with routes or corridors. Based on the DMRB guidance, affected roads which should be assessed are those where:

- Daily traffic flows will change by 1,000 AADT (Annual Average Daily Traffic) or more; or
- Heavy duty vehicle (HDV) flows will change by 200 AADT or more; or
- A change in speed band; or
- Road alignment will change by 5m or more.

4.44 Where significant increases in traffic are possible on roads within 200m of European sites (or in some cases functionally-linked habitats), traffic forecast data may be needed to determine if increases in vehicle traffic are likely to be significant. In line with the Wealden judgement [\[See reference 37\]](#), the traffic growth considered by the HRA should be based on the effects of development provided for by the Local Plan in combination with other drivers of growth such as development proposed in neighbouring districts and demographic change.

4.45 It has been assumed that only those roads forming part of the primary road network (motorways and 'A' roads) are likely to experience any significant increases in vehicle traffic as a result of development (i.e. greater than 1,000 AADT). As such, where a site is within 200m of only minor roads, no significant effect from traffic-related air pollution is considered to be the likely outcome.

4.46 All of the European sites considered in this HRA have qualifying features that are sensitive to air pollution, either directly or via the features' supporting habitats. **Table 4.1** summarises the sites that could be affected air pollution, as

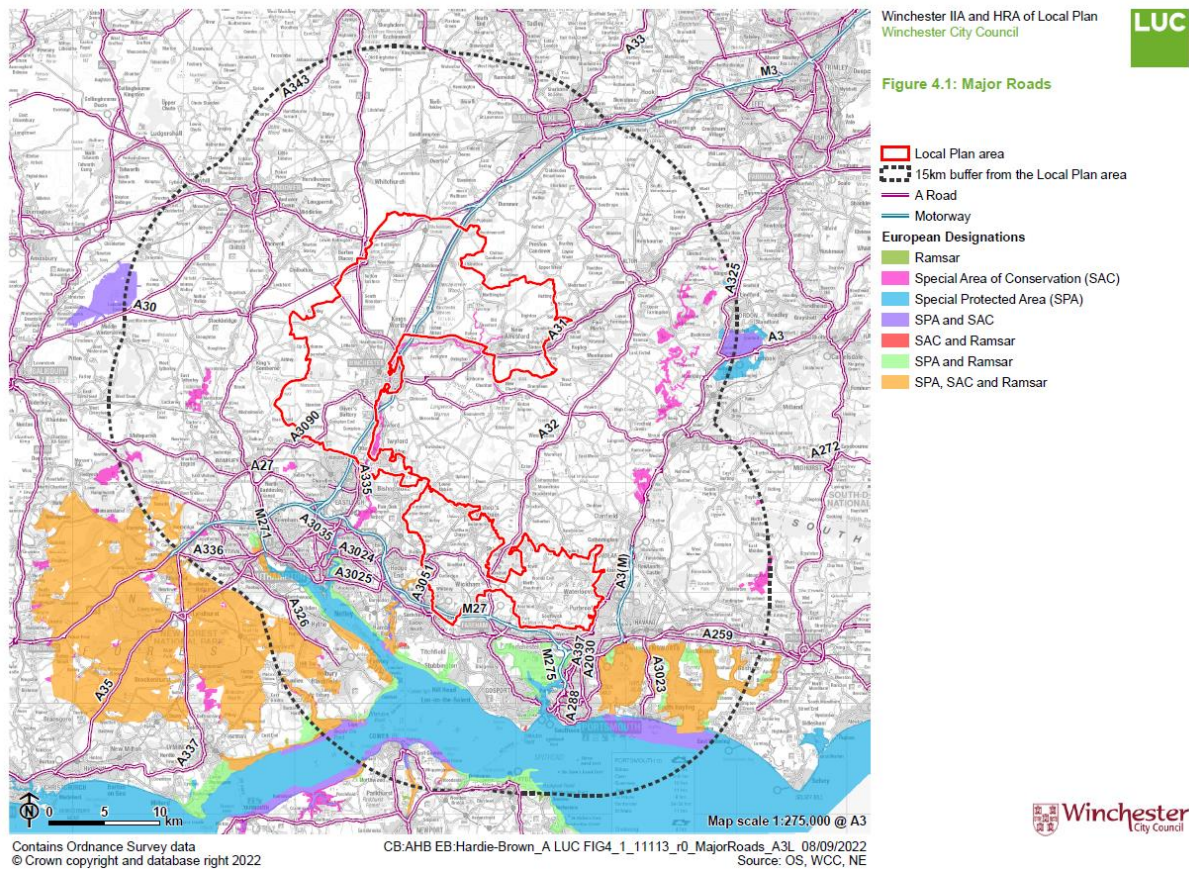

a result of increased traffic associated with the Winchester Local Plan. Error! Reference source not found. shows the roads that could affect them (see 'FLL outside the Plan area', below).

Table 4.1: European sites, roads within 200m and HRA screening

European site	Motorway/A roads within 200m	Notes
Screened in		
Butser Hill SAC	A3	A3 is entirely outside the Plan area.
Chichester & Langstone Harbour SPA/Ramsar	A3(M), A27, A2030, A3023; A259,	All of these roads are entirely outside the Plan area, but the A27 links to the M27 (in Plan area).
New Forest SAC, SPA/Ramsar	A36, M27	M27 links to the Plan area. Additional roads pass this site within 200m but are beyond 15km from the Plan area.
Portsmouth Harbour SPA/Ramsar	A27, M27, M275	The M27 links to the Plan area; the other roads are outside it.
River Itchen SAC	A31, A34, M3, M27	The M27 is outside the Plan area but linked to it. The other roads are all within the Plan area.
Solent Maritime SAC and Solent & Southampton Water SPA/Ramsar	A3(M), A27, A2030, A3023; A259, M27, M271, A35, A36	The M27 links to the Plan area; the other roads are outside it. Other parts of Solent Maritime SAC and Solent & Southampton Water SPA/Ramsar are either not within 15km of the Plan area, not linked by roads (e.g. on the Isle of Wight), or not next to major roads.
Salisbury Plain SAC and Porton Down SPA	A30	A30 is outside the Plan area.

European site	Motorway/A roads within 200m	Notes
		Additional roads pass this site within 200m but are beyond 15km from the Plan area.
Woolmer Forest SAC and Wealden Heath SPA	A3, A325	Both roads are outside the Plan area
Screened out		
East Hampshire Hangers SAC	None	
Emer Bog SAC	None	
Kingley Vale SAC	None	
Mottisfont Bats SAC	None	
Rook Clift SAC	None	
Shortheath Common SAC	None	
Solent & Isle of Wight Lagoons SAC	Within 15km of the Plan area: none	Other parts of Solent & Isle of Wight Lagoons SAC are either not within 15km of the Plan area, not linked by roads (e.g. on the Isle of Wight), or not next to major roads.

Figure 4.1: Major roads in proximity to European sites

4.47 The following policies and all of the allocated sites could result in an increase in traffic on roads within or close to the Plan area, and therefore increase air pollution at European sites or FLL:

- Policy SP3: Development in the countryside;
- Policy CN5: Renewable and low carbon energy schemes;
- Policy CN6: Micro energy generation schemes;
- Policy NE12: Equestrian development;
- Policy NE13: Leisure and recreation in the countryside;
- Policy H1: Housing provision;
- Policy H4: Development within settlements;
- Policy H9: Purpose built student accommodation;
- Policy H12: Provision for Gypsies, Travellers and Travelling Showpeople;
- Policy E3: Town centres strategy and hierarchy;
- Policy E4: Retail and main town centre uses;
- Policy E8: Local shops, services and facilities;
- Policy E9: Economic development in the rural area;
- Policy E10: Farm diversification; and
- Policy E11: Visitor-related development within the countryside.

4.48 The relevant European sites are all outside the Plan area but development/site allocations contributing traffic to the A3 (east of the Plan area), A303 (northwest of the Plan area) and M27 (south of the Plan area) would be the most likely to increase traffic past these European sites.

4.49 These policies would contribute traffic to the road network as a whole and effects would therefore be in combination with other plans and projects. In addition to European sites within 200m of roads, increased traffic could also affect sensitive FLL within 200m of roads, within or close to the Plan area.

FLL outside the Plan area

4.50 As set out above, under 'FLL within the Plan area', a number of the European sites within 15km of the Plan area have mobile species that may make use of FLL. The following may make use of FLL outside the Plan area, and therefore have the potential to be affected by increases in traffic on the wider road network:

- Mottisfont Bats SAC: Barbastelle bats, which may use larger areas of woodland within 7km of the SAC;
- River Itchen SAC: Otter and southern damselfly may use riparian and wetland habitat beyond the SAC boundary. Atlantic salmon migrate to sea; therefore the SAC has functional links to Southampton Water and beyond.
- New Forest SAC: Stag beetle may use decaying wood habitat within 2km of the SAC. Great crested newts may travel up to 2km from their breeding ponds.
- Porton Down SPA: Stone curlew may use grassland up to 1.5km from the SAC.
- Chichester & Langstone Harbours SPA / Ramsar, Portsmouth Harbour SPA / Ramsar, Solent & Dorset Coast SPA, and Solent & Southampton Water SPA / Ramsar: waterbirds use habitats outside the designated areas, within 2km of the coast and estuaries of Southampton Water and the Solent.

FLL relevant to air pollution

4.51 None of the European sites that potentially have FLL associated with them are particularly sensitive to air pollution (see paragraph 4.46). Therefore it is unlikely that the FLL will be sensitive to air pollution to the extent that air pollution at FLL could alter the type, distribution and/or quality of habitats present and therefore have a significant effect at the linked European site.

4.52 There is potential for likely significant effects to occur in relation to air pollution at Butser Hill SAC, Chichester & Langstone Harbour SPA/Ramsar, Solent Maritime SAC, Salisbury Plain SAC, or Woolmer Forest SAC. This therefore requires further consideration at Appropriate Assessment.

Changes in water quantity or quality

4.53 An increase in demand for water abstraction and treatment, and changes in land use resulting from the growth proposed in the Local Plan could result in changes in hydrology at European sites. Depending on the qualifying features and particular vulnerabilities of the European sites, this could result in likely significant effects; for example due to changes in environmental or biotic conditions, water chemistry and the extent and distribution of preferred habitat conditions.

4.54 Habitats can also be affected by changes in water quality such as nutrient enrichment, changes in salinity, smothering from dust, and run-off, discharge or spillage from industry, agriculture or construction. Changes in water abstraction, discharge and land use can also affect water quality, for example a change in land use from agriculture to residential reduces direct nutrient run-off to watercourses but increases the volume of nutrients discharges from wastewater treatment works.

4.55 Natural England's June 2020 guidance [\[See reference 38\]](#) on nutrient neutrality for new development in the Solent region stated that:

There are high levels of nitrogen and phosphorus input to [the Solent] with sound evidence that these nutrients are causing eutrophication at these designated sites. These nutrient inputs currently mostly come either from agricultural sources or from wastewater from existing housing and other development. The resulting dense mats of green algae and other effects on the marine ecology from an excessive presence of nutrients are impacting on the Solent's protected habitats and bird species.

There is uncertainty as to whether new [housing] growth will further deteriorate designated sites. This issue has been subject to detailed work commissioned by local planning authorities (LPAs) in association with Natural England, Environment Agency and water companies. This strategic work, which updates early studies, is on-going. Until this work is complete, the uncertainty remains and the potential for future housing developments across the Solent region to exacerbate these impacts creates a risk to their potential future conservation status.

One way to address this uncertainty is for new development to achieve nutrient neutrality. Nutrient neutrality is a means of ensuring that development does not add to existing nutrient burdens and this provides certainty that the whole of the scheme is deliverable in line with the requirements of the Conservation of Habitats and Species Regulations 2017.

4.56 Natural England developed a methodology for assessed nutrient neutrality, which was then updated in March 2022 and a revised calculator for the Solent

provided in April 2022 [\[See reference 39\]](#). The updated guidance expanded the number of catchments in which nutrients in which new development would need to demonstrate nutrient neutrality, updated the calculation methodology, and highlighted the issue of phosphorus in the River Itchen SAC (which had previously only been identified as having an issue with nitrogen).

4.57 European sites with potential to be affected by changes in water quantity or quality are likely to be sites (or their FLL) that lie within the Plan area or those that are hydrologically connected to areas of development provided for by the plan. These are:

- Chichester & Langstone Harbours SPA/Ramsar;
- Portsmouth Harbour SPA/Ramsar;
- River Itchen SAC (and potential FLL near the River Itchen);
- River Meon pSAC;
- Solent & Dorset Coast SPA;
- Solent & Isle of Wight Lagoons SPA / Ramsar;
- Solent & Southampton Water SPA/Ramsar (and potential FLL near the River Hamble);
- Solent Maritime SAC; and
- Woolmer Forest SAC.

4.58 Wastewater treatment works serving the Plan area fall within two of Southern Water's planning areas:

- Test and Itchen Catchment [\[See reference 40\]](#); and
- East Hampshire Catchment [\[See reference 41\]](#) (River Meon and River Hamble).

4.59 The Rivers Test, Itchen, Hamble and Meon all flow through the Plan area and into Southampton Water and the Solent. The River Itchen SAC, River Meon pSAC and the marine and coastal European sites downstream of those rivers (Solent & Dorset Coast SPA, Solent & Southampton Water SPA/Ramsar and Solent Maritime SAC) therefore have the potential to be affected by changes in water quality or quantity, particularly nutrient enrichment, and will be assessed in the HRA. The wetland habitats at Woolmer Forest SAC (the only terrestrial SAC sensitive to changes in water quantity/quality) are unlikely to be hydrologically connected to the Plan area and therefore do not need to be considered further in the HRA.

4.60 The following policies and associated site allocations (all of the Plan's allocated residential and employment sites) could result in changes to water quality or quantity within the Test & Itchen or East Hampshire Catchments:

- Policy SP3: Development in the countryside;
- Policy NE12: Equestrian development;
- Policy NE13: Leisure and recreation in the countryside;
- Policy H1: Housing provision;
- Policy H4: Development within settlements;
- Policy H9: Purpose built student accommodation;
- Policy H12: Provision for Gypsies, Travellers and Travelling Showpeople;
- Policy E3: Town centres strategy and hierarchy;
- Policy E4: Retail and main town centre uses;
- Policy E8: Local shops, services and facilities;
- Policy E9: Economic development in the rural area;
- Policy E10: Farm diversification; and
- Policy E11: Visitor-related development within the countryside.

In addition, developments in close proximity to European sites could result in direct run off (e.g. during construction). Sites within 500m of European sites are:

- River Itchen SAC: KW1, KW2, NA1, W3, W4, W5, W6, W7, W9, W10, CC3
- River Meon pSAC: WK1, WK2, WK4
- Solent & Southampton Water SPA/Ramsar: SH2 (including subsites CU18, CU24, CU34 and CU45)

4.61 There is potential for likely significant effects to occur in relation to change to water quality or quantity at River Itchen SAC, Solent & Dorset Coast SPA, Solent & Southampton Water SPA/Ramsar and Solent Maritime SAC. This therefore requires further consideration at Appropriate Assessment.

Recreation pressure and urban edge effects

4.62 Recreational activities and human presence can result in significant effects on European sites as a result of erosion and trampling, associated impacts such as fire and vandalism or disturbance to sensitive features, such as birds through both terrestrial and water-based forms of recreation.

4.63 The Local Plan will result in housing growth and an associated population increase. Where increases in population are likely to result in significant increases in recreation at a European site, either alone or in-combination, the potential for likely significant effects will require assessment, once the overall number of homes and potential location of development is known.

4.64 European sites with qualifying bird species are likely to be particularly susceptible to recreational disturbances such as walking, dog walking, angling, illegal use of off-road vehicles and motorbikes, and water sports. An increase in

recreational pressure from development therefore has the potential to disturb bird populations of European sites as a result of both terrestrial and water-based recreation.

4.65 In addition, recreation can physically damage habitat as a result of trampling and also through erosion associated with boat wash and terrestrial activities such as use of vehicles.

4.66 Each European site will typically have a 'Zone of Influence' (ZOI) within which increases in population would be expected to result in likely significant effects. ZOIs are usually established following targeted visitor surveys and the findings are therefore typically specific to each European site (and often to specific areas within a European site).

4.67 ZOIs are likely to be influenced by a number of complex and interacting factors and therefore it is not always appropriate to apply a generic or non-specific ZOI to a European Site. Particularly in relation to coastal European sites or large sites such as the New Forest, which have the potential to draw large number of visitors from areas much further afield. In some cases, functionally-linked habitats used by qualifying species can also be affected by recreation pressure and urban edge effects.

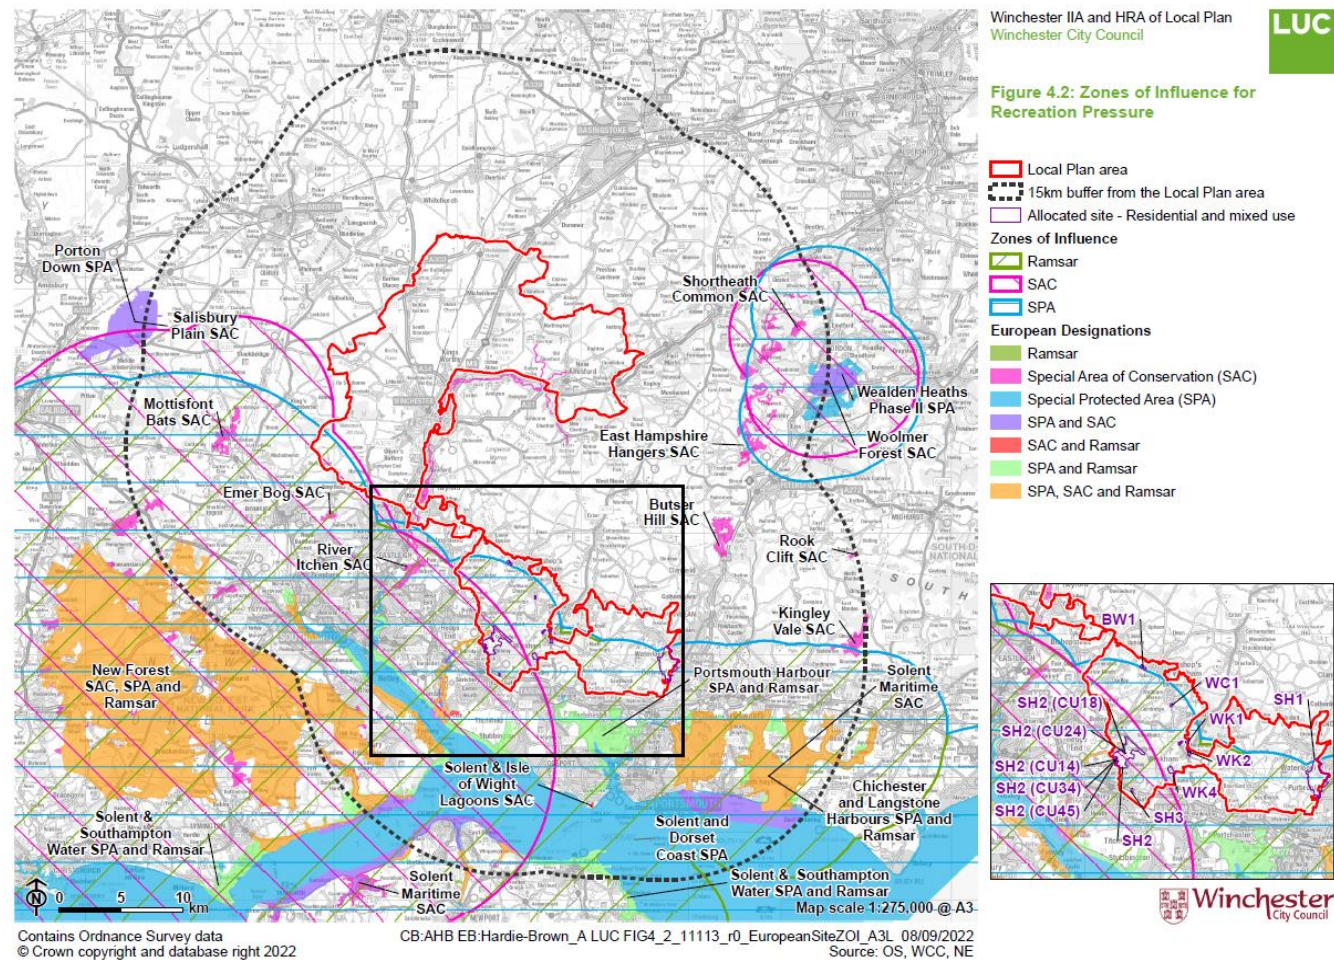

4.68 Zones of influence for sensitive sites are shown in **Table 4.2** and on **Figure 4.2**.

Table 4.2: Zones of Influence for European Sites sensitive to recreation pressure and urban edge effects

European site	Zone of influence	Source
Screened in: ZOIs within Plan area		
Solent & Southampton Water SPA/Ramsar (within Plan area)	5.6km	Solent Recreation Mitigation Strategy [See reference 42]
Chichester & Langstone Harbours SPA/Ramsar (c.2.3km away)	5.6km	Solent Recreation Mitigation Strategy
Portsmouth Harbour SPA (c.1.2km away)	5.6km	Solent Recreation Mitigation Strategy
Solent & Dorset Coast SPA (c.1.2km away)	5.6km	Solent Recreation Mitigation Strategy and Gosport Bird Disturbance Mitigation Protocol [See reference 43]
Mottisfont Bats SAC (c.6.0km away)	7.5km	Mottisfont Bats Special Area of Conservation (SAC) Protocol for Planning Officers [See reference 44]
Screened out: ZOIs outside Plan area		
Shortheath Common SAC (c.12.0km away)	5km	Wealden Heaths and Shortheath Common 2018 Visitor Surveys [See reference 45] South Downs National Park Local Plan HRA [See reference 46] (more precautionary figure used)
Woolmer Forest SAC (c.13.6km away)	5km	Wealden Heaths and Shortheath Common 2018 Visitor Surveys South Downs National Park Local Plan HRA (more precautionary figure used)

European site	Zone of influence	Source
Wealden Heaths Phase 2 SPA (14.2km away)	5km	Wealden Heaths and Shortheath Common 2018 Visitor Surveys South Downs National Park Local Plan HRA (more precautionary figure used)
New Forest SAC/SPA/ Ramsar (c.10.5km away in a direct line but >30km by road)	13.8km	Interim Recreation Mitigation Strategy for The New Forest Internationally Protected Sites [See reference 47]

Figure 4.2: Zones of influence for recreation pressure

4.69 In response to consultation on the HRA Scoping Report (see Appendix C), the South Downs National Park Authority (SDNPA) stated that: “The SDNPA does not consider recreational pressure to be of particular concern for the River Itchen SAC, however dog walkers and disturbance of wildlife should be a consideration”; although the SDNPA HRA screened out recreation pressure in relation to this site. Otter are susceptible to recreational disturbance but the majority of suitable habitat around the River Itchen is within private inaccessible land where increases in housing and population would not be expected to increase disturbance events. Areas where recreational activities occur along the Itchen are generally focused around specific parks where increases in recreation are not expected to impact upon otter populations. Recreation pressure in relation River Itchen SAC has therefore been screened out.

4.70 Butser Hill SAC and East Hampshire Hangers SAC, although they have qualifying features that could be sensitive to recreation pressure, have been screened out, as they are not in fact particularly sensitive. This is in line with the approach taken in the South Downs National Park Local Plan HRA.

4.71 The following residential sites allocations are within ZOIs for European sites:

- River Itchen SAC: NA1, NA2, W1, W2, W3, W4, W7, W9, W10, W11, KW1, KW2, O1, CC1, CC2, CC3, CC4
- Solent & Southampton Water SPA/Ramsar: H16, H18, SH2 (incl. CU14, CU18, CU24, CU34), SH3, WC1, WK4.
- Chichester & Langstone Harbours SPA/Ramsar: SH1.
- Portsmouth Harbour SPA: H18, SH1, SH3, WK2, WK4.
- Solent & Dorset Coast SPA: as for all three of the above.

4.72 There may also be FLL that is sensitive to recreation pressure associated with Solent & Southampton Water SPA/Ramsar within the Plan area (around Hamble).

4.73 Although there are several site allocations within the ZOI for New Forest SAC/SPA/Ramsar, they are separated from the European site by Solent Water. Actual travel distance is significantly further than the ZOI (at least 30 km by road); therefore recreation pressure associated with this site has been screened out.

4.74 There are no residential site allocations within the ZOI for Mottisfont Bats SAC and there is unlikely to be any significant residential development within 7.5km as this is a rural area where small scale development only is permitted. Recreation pressure associated with this site has therefore been screened out.

4.75 The following policies could result in residential development or tourism (in addition to associated residential site allocations), and therefore an increase in recreation pressure, within the Plan area:

- Policy SP3: Development in the countryside;
- Policy NE12: Equestrian development;
- Policy NE13: Leisure and recreation in the countryside;
- Policy H1: Housing provision;
- Policy H4: Development within settlements;
- Policy H9: Purpose built student accommodation;
- Policy H12: Provision for Gypsies, Travellers and Travelling Showpeople;
- Policy E3: Town centres strategy and hierarchy; and
- Policy E11: Visitor-related development within the countryside.

4.76 There is potential for likely significant effects to occur in relation to change to recreation pressure and urban edge effects at River Itchen SAC, Solent & Southampton Water SPA/Ramsar, Chichester & Langstone Harbours SPA/Ramsar, and Portsmouth Harbour SPA. This therefore requires further consideration at Appropriate Assessment.

Screening conclusion

4.77 Appropriate Assessment is required as some likely significant effects from the Local Plan, alone or in combination with other projects or plans, cannot be ruled out without further assessment.

4.78 The scope of the Appropriate Assessment has been narrowed down by considering each policy in turn, to determine whether it would result in the type of development that could have an effect on a European site; this is set out in **Appendix B**. The policies for which likely significant effects have not been ruled out are summarised in **Table 4.3: Policies in the Local Plan giving rise to the need for Appropriate Assessment**. A summary of the screening of site allocations is provided in **Table 4.4**.

4.79 **Table 4.5** summarises the Screening conclusions reached in this HRA, in relation to impact type and European site. The following categories are used:

- Screened in - as Local Plan is considered likely to have a likely significant effect alone (or in combination).
- No LSE (likely significant effect) – as impact of Local Plan unlikely to be significant on its own or in combination.
- Screened out (no impact pathway) – due to distance thresholds/lack of sensitivities of qualifying features as discussed in this chapter.

Table 4.3: Policies in the Local Plan giving rise to the need for Appropriate Assessment

Plan policy	Likely effect if proposal is implemented
Policy SP3: Development in the countryside	Air pollution Changes in water quality / quantity

Plan policy	Likely effect if proposal is implemented
	<p>Non-physical disturbance</p> <p>Physical damage / loss</p> <p>Fragmentation / severance</p> <p>Recreation pressure / urban edge effects</p>

Policy E10: Farm diversification	Air pollution Changes in water quality / quantity
Policy E11: Visitor-related development within the countryside	Air pollution Changes in water quality / quantity Non-physical disturbance Recreation pressure / urban edge effects

Table 4.4: Screening summary: site allocations

Type of impact	Screening criteria (Development site could have a significant effect if...)	Potential development sites meeting screening criteria (sites to be considered in Appropriate Assessment)
Physical damage and loss of habitat Fragmentation and severance	Development occurs within or immediately adjacent to a European site or functionally linked habitat.	No allocated sites are within a European site Sites W6 and SH2 are adjacent to European sites. Parts of SH2 were surveyed as potential FLL and identified as 'low use site' as part of the Solent Waders and Brent Goose Strategy work. Further allocations may be present in areas of FLL that have not yet been surveyed/identified.
Non-physical disturbance	Development occurs within 500m of a European site or functionally linked habitat that supports qualifying features susceptible to impacts from non-physical disturbance, such as vibration, noise or light; ie development within 500m of: <ul style="list-style-type: none"> ■ River Itchen SAC (and its FLL) ■ Solent & Southampton Water SPA/Ramsar (and its FLL) 	River Itchen SAC (and its FLL): KW1, KW2, NA1, W3, W4, W5, W6, W7, W9, W10, CC3. Solent & Southampton Water SPA/Ramsar (and its FLL): SH2 (including subsites CU18, CU24, CU34 and CU45)
Air pollution	Development is within 200m from roads forming part of the primary road network (motorways and 'A' roads), and increases traffic flows by at least	All allocated sites (in combination).

Type of impact	Screening criteria (Development site could have a significant effect if...)	Potential development sites meeting screening criteria (sites to be considered in Appropriate Assessment)
	<p>1,000 AADT or 200 AADT (alone or in combination) on the following roads:</p> <ul style="list-style-type: none"> ■ Butser Hill SAC: A3 ■ Chichester & Langstone Harbour SPA/Ramsar: A3(M), A27, A2030, A3023; A259 ■ New Forest SAC, SPA/Ramsar: A36, M27 ■ Portsmouth Harbour SPA/Ramsar: A27, M27, M275 ■ River Itchen SAC: A31, A34, M3, M27 ■ Solent Maritime SAC and Solent & Southampton Water SPA/Ramsar: A3(M), A27, A2030, A3023; A259, M27, M271, A35, A36 ■ Salisbury Plain SAC and Porton Down SPA: A30 ■ Woolmer Forest SAC and Wealden Heath SPA: A3, A325 	<p>These European sites are all outside the Plan area but development contributing traffic to the A3 (east of the Plan area), A303 (northwest of the Plan area) and M27 (south of the Plan area) would be the most likely to increase traffic past these European sites.</p>

Type of impact	Screening criteria (Development site could have a significant effect if...)	Potential development sites meeting screening criteria (sites to be considered in Appropriate Assessment)
Changes in water quantity or quality	Development extracting from or discharging to the Test and Itchen Catchment (River Itchen SAC plus Solent & Dorset Coast SPA, Solent & Southampton Water SPA/Ramsar and Solent Maritime SAC) or East Hampshire Catchment (River Meon pSAC, Solent & Dorset Coast SPA, Solent & Southampton Water SPA/Ramsar and Solent Maritime SAC)	<p>All sites allocations could increase abstraction / discharge in these catchments.</p> <p>In addition, developments in close proximity to European sites could result in direct run off (e.g. during construction). Sites within 500m of European sites are:</p> <ul style="list-style-type: none"> ■ River Itchen SAC: KW1, KW2, NA1, W3, W4, W5, W6, W7, W9, W10, CC3 ■ River Meon pSAC: WK1, WK2, WK4 ■ Solent & Southampton Water SPA/Ramsar: SH2 (including subsites CU18, CU24, CU34 and CU45)
Recreation pressure and urban edge effects	<p>Increases in population are likely to result in significant increases in recreation at a European site, either alone or in-combination.</p> <p>Residential site allocations within 5km ZOI of:</p> <ul style="list-style-type: none"> ■ Shortheath Common SAC ■ Woolmer Forest SAC ■ Wealden Heaths Phase 2 SPA 	<p>ZOIs fall outside the Plan area for:</p> <ul style="list-style-type: none"> ■ Shortheath Common SAC, ■ Woolmer Forest SAC, ■ Wealden Heaths Phase 2 SPA <p>No residential site allocations within the ZOIs for:</p> <ul style="list-style-type: none"> ■ Mottisfont Bats SAC ■ New Forest: H18, SH2 (incl. CU14, CU18, CU24, CU34), SH3, WK4 are within 13.8km in a direct line.

Type of impact	Screening criteria (Development site could have a significant effect if...)	Potential development sites meeting screening criteria (sites to be considered in Appropriate Assessment)
	<p>Residential site allocations within 5.6km ZOI of:</p> <ul style="list-style-type: none"> ■ Solent & Southampton Water SPA/Ramsar ■ Chichester & Langstone Harbours SPA/Ramsar ■ Portsmouth Harbour SPA ■ Solent & Dorset Coast SPA <p>Residential site allocations within 7.5km ZOI of:</p> <ul style="list-style-type: none"> ■ Mottisfont Bats SAC <p>Residential site allocations within 13.8km ZOI of:</p> <ul style="list-style-type: none"> ■ New Forest SAC/SPA/ Ramsar 	<p>However, Solent Water is between these sites and the New Forest, so actual travel distance is significantly further (at least 20 miles by road)</p> <p>Residential sites allocations within ZOIs for:</p> <ul style="list-style-type: none"> ■ Solent & Southampton Water SPA/Ramsar: H16, H18, SH2 (incl. CU14, CU18, CU24, CU34), SH3, WC1, WK4. ■ Chichester & Langstone Harbours SPA/Ramsar: SH1. ■ Portsmouth Harbour SPA: H18, SH1, SH3, WK2, WK4. ■ Solent & Dorset Coast SPA: as for all three of the above.

Table 4.5: Summary of screening assessment

European site	Physical damage / loss	Non-physical disturbance	Air pollution	Changes in water quality or quantity	Recreation pressure
River Itchen SAC	Screened in (incl FLL)	Screened in (incl FLL)	Screened in	Screened in (incl FLL)	Screened out (no LSEs)

Chapter 5

Appropriate Assessment

5.1 The HRA screening has identified the need for Appropriate Assessment, as certain likely significant effects from the Local Plan (alone or in combination with other projects or plans) cannot be ruled out without further assessment or information.

5.2 For each type of impact that has been identified as having a likely significant effect, the Appropriate Assessment considers the scale and likely impacts on each of the European sites, the elements of the Local Plan (and other plans or projects, where relevant) that would have those effects, and any mitigation or safeguards in place that would reduce the effects. The assessment then considers whether there would be an adverse effect on the integrity of a European site.

5.3 The Appropriate Assessment assesses the Local Plan, using currently available information. Where there is insufficient information to undertake quantitative assessment, the HRA identifies the information that will be required to do so (see also **Chapter 6**).

5.4 The following policies and all site allocations in the Local Plan will result in the type of development or activities that could affect European sites (see **Table 4.3**):

- Policy SP3: Development in the countryside
- Policy CN5: Renewable and low carbon energy schemes
- Policy CN6: Micro energy generation schemes
- Policy CN7: Energy storage
- Policy NE12: Equestrian development

- Policy NE13: Leisure and recreation in the countryside
- Policy H1: Housing provision
- Policy H4: Development within settlements
- Policy H9: Purpose built student accommodation
- Policy H12: Provision for Gypsies, Travellers and Travelling Showpeople
- Policy E2: Spatial distribution of economic growth
- Policy E3: Town centres strategy and hierarchy
- Policy E4: Retail and main town centre uses
- Policy E8: Local shops, services and facilities
- Policy E9: Economic development in the rural area
- Policy E10: Farm diversification
- Policy E11: Visitor-related development within the countryside

Physical damage and loss of habitat

5.5 The HRA screening (Chapter 4) identified the potential for likely significant effects arising from physical damage or loss of habitat at River Itchen SAC, Solent & Southampton Water SPA/Ramsar or Solent Maritime SAC, where development is within or adjacent to a European site; or where development could occur on functionally linked land (FLL) associated with River Itchen SAC or Solent & Southampton Water SPA/Ramsar.

5.6 None of the site allocations are within the European sites, but W6 is adjacent to River Itchen SAC and SH2 is adjacent to Solent & Southampton Water SPA/Ramsar and Solent Maritime SAC. Parts of SH2 were surveyed as potential FLL and identified as 'low use site' as part of the Solent Waders and Brent Goose Strategy work.

5.7 The potential for effects on these sites arises for the following reasons:

- Some policies permit development in locations outside site allocations and therefore exact location is unknown;
- Although some areas of FLL are known, some might only be identified through ecological survey of development sites; and
- Some of the site allocations are adjacent to European sites; without environmental controls during construction, there could be accidental damage to habitats within the European sites.

5.8 The HRA screening is not able to take into account mitigation. The Appropriate Assessment therefore considers what safeguards and mitigation are in place to prevent these effects from occurring.

5.9 The main policy protection within the Local Plan is ‘Policy NE1: Protecting and enhancing biodiversity and the natural environment in the district’, which states that development will only be permitted where it protects and enhances the natural environment and biodiversity. It provides general protection for European sites, stating that development must demonstrate that it:

“i. Avoids significant harm to the natural environment, biodiversity and geodiversity or can adequately mitigate any harm arising and can clearly demonstrate that there will be no adverse impact on the conservation status of key species, nationally protected designated sites, or locally designated sites and there will be no net loss or deterioration of a key habitat type including irreplaceable habitats and the integrity of linkages between designated sites and key habitats” and

“vi. Protects, conserves and enhances the air and water environments in the district.”

5.10 Additional general protection is contained within:

- Policy D5: Masterplans: requires ‘significant development on sites occupied by major landowners/users’ to achieve the following: o. Demonstrate a good understanding and respect for the natural environment, its heritage assets and their setting both within the site and in the wider locality, whether designated or not, and include details of how the natural environment and heritage assets will be preserved, conserved and enhanced (general protection).
- Policy NE5: Biodiversity: requires developments to demonstrate how biodiversity will be retained, protected and enhanced, which contributes to general protection of European sites..

5.11 In relation to development near rivers and wetland habitats, the following policies provide some general protection:

- Policy NE17: Rivers, watercourses and their settings: states that developments will be permitted where they conserve and enhance water quality / quantity; and the ability of groundwater and surface water features to function.
- Policy D8: Contaminated land: states that development on land affected by contamination will only be permitted where there are no unacceptable impacts on groundwater or surface water; and appropriate mitigation is set out.

5.12 These policies are considered sufficient to ensure that development in or adjacent to a European site would either not be permitted or would be required to demonstrate sufficient mitigation to avoid adverse effects on the integrity of the European site.

5.13 Although the policies require ecological protection and mitigation, Policy NE1 should be strengthened to draw attention to the potential for impacts on FLL. This is implied where the policy refers to ‘the integrity of linkages between designated sites and key habitats’, but clarity on locations and types of habitats

with the potential to be functionally linked to European sites would provide certainty that effects on FLL would be avoided. Suggested revisions to policy wording are provided in **Chapter 6**.

5.14 Adverse effects on the integrity of River Itchen SAC, Solent & Southampton Water SPA/Ramsar and Solent Maritime SAC due to physical damage and loss of habitat of FLL associated with it cannot be ruled out until policy wording is strengthened.

Non-physical disturbance

5.15 The HRA screening identified the potential for likely significant effects arising from non-physical disturbance at River Itchen SAC and Solent & Southampton Water SPA/Ramsar, where development is within 500m of a European site; or where development could occur on functionally linked land (FLL) associated with these sites. Several site allocations (KW1, KW2, NA1, W3, W4, W5, W6, W7, W9, W10, CC3) are within 500m of the SAC and SH2 is within 500m of the SPA/Ramsar. A number of policies also permit development outside of site allocations.

5.16 The potential for these effects arises for the same reasons as for physical damage and loss of habitat, i.e. some allocations known to be within 500m and some unknowns relating to development locations and FLL.

5.17 Non-physical disturbance (light, noise and vibration) can result in species not using a habitat, but can also discourage movement between habitat (fragmentation).

5.18 As with effects relating to physical damage and loss of habitat, Policy NE1 provides the main general protection of the European sites. Policies D5 and NE5 provide additional general protection for biodiversity.

5.19 Additional protection is provided by the following policies:

- Policy D7: Development standards states that

“Where there is potential for adverse impacts to occur on the following matters a detailed assessment should be conducted: i. odour; ii. light intrusion/glare; iii. ambient air quality; iv. water pollution; v. contaminated land; and vi. construction phase pollution impacts for large or prolonged developments. The report should identify and detail any mitigation measures that are necessary to make the development acceptable in respect of the adverse impacts on health and quality of life. The local Planning Authority may require specific mitigation measures to be undertaken in order to make developments acceptable in terms of matters relating to pollution.” and

“Development which generates noise pollution or is sensitive to it will only be permitted where it accords with the Development Plan and does not have an unacceptable impact on human health or quality of life. A noise generating or noise sensitive development should include an assessment to demonstrate how it prevents, or minimises to an acceptable level, all adverse noise impacts.”

- Policy NE14: Rural character: States that development in rural areas must not have an unacceptable impact e.g. from lighting or noise. Developments must demonstrate that opportunities to reduce light pollution have followed mitigation hierarchy.

5.20 The policies provide good protection, but policy wording should be strengthened to indicate that developments need to consider the potential for non-physical disturbance and to provide greater certainty that effects on FLL can be avoided (see suggested wording in **Chapter 6**.)

5.21 Adverse effects on the integrity of River Itchen SAC or Solent & Southampton Water SPA/Ramsar due to non-physical disturbance of the SAC or FLL associated with it cannot be ruled out until policy wording is strengthened.

Air pollution

5.22 The HRA Screening identified the potential for significant effects at several European sites within 200m of major roads as follows:

- Butser Hill SAC: A3
- Chichester & Langstone Harbour SPA/Ramsar: A3(M), A27, A2030, A3023; A259
- New Forest SAC, SPA/Ramsar: A36, M27
- Portsmouth Harbour SPA/Ramsar: A27, M27, M275
- River Itchen SAC: A31, A34, M3, M27
- Solent Maritime SAC: A3(M), A27, A2030, A3023; A259, M27, M271, A35, A36
- Salisbury Plain SAC and Porton Down SPA: A30
- Woolmer Forest SAC and Wealden Heaths SPA: A3, A325

5.23 Air quality data [\[See reference 48\]](#) for these sites shows that the SACs, Porton Down SPA and Wealden Heaths SPA are exceeding critical loads for N deposition and acidity for all habitat types (with the exception of some of the Solent Maritime habitats). Chichester & Langstone Harbour SPA/Ramsar is exceeding critical loads for some features.

5.24 The effects would arise from the Local Plan in combination with other plan projects. These European sites are all outside the Plan area and there is

currently insufficient information to determine whether the Local Plan would contribute to a significant increase in traffic on these roads. Development contributing traffic to the A3 (east of the Plan area), A303 (northwest of the Plan area) and M27 (south of the Plan area) would be the most likely to increase traffic past these European sites, but traffic data is required to quantify likely impacts. If traffic data shows an increase in traffic on roads passing European sites of 1,000 AADT or more, air quality assessment would then be required to inform the Appropriate Assessment. See 'next steps' in **Chapter 6**.

5.25 Until traffic data is available to quantify the effects on the Local Plan on roads passing them, adverse effects on the integrity of Butser Hill SAC, Chichester & Langstone Harbour SPA/Ramsar, New Forest SAC & SPA/Ramsar, Porton Down SPA, Portsmouth Harbour SPA/Ramsar, River Itchen SAC, Solent Maritime SAC, Solent & Southampton Water SPA/Ramsar, Salisbury Plain SAC, Wealden Heath SPA or Woolmer Forest SAC cannot be ruled out.

Changes in water quantity or quality

5.26 The HRA Screening identified the potential for likely significant effects relating to changes in water quantity or quality could affect River Itchen SAC, Solent & Dorset Coast SPA, Solent & Southampton Water SPA/Ramsar and Solent Maritime SAC.

5.27 These effects could arise as a result of:

- Direct runoff and pollution e.g. accidental spills during construction, where development is in close proximity to River Itchen SAC (or its FLL), Solent & Southampton Water SPA/Ramsar (or its FLL) or Solent Maritime SAC (see paragraph 5.15).
- Abstraction of water within the Itchen catchment, reducing flows in the river (the SAC).

- Discharge of water into the Itchen, Test, Hamble or Meon catchments, that increases nitrogen or phosphorus within River Itchen SAC, Solent & Southampton Water SPA/Ramsar or Solent Maritime SAC.

River Itchen SAC

Abstraction

5.28 Abstraction to supply water to new development could result in reduced water levels within River Itchen SAC. Southern Water's Water Resource Management Plan [See reference 49] states that South Hampshire takes one third of its water from groundwater and two thirds from the River Test and River Itchen. It also says:

"In order to protect the unique chalk rivers in Hampshire, the River Test and River Itchen, we agreed changes to the amount of water we can abstract from them. This means in droughts we only have access to about one fifth of the supplies we need, so we've developed a multi-million pound plan to secure alternative resources, including:

- Reducing leaks, installing meters and promoting water efficiency
- Building a desalination plant on the Solent
- Importing water from South West Water
- Importing water from Portsmouth Water (from the creation of a new reservoir and other sources)

Environmental improvement projects to improve water quality and river flow. These are our preferred options, but we're also exploring others to make sure we secure reliable supplies as soon as possible, such as water

recycling. In the meantime, until at least 2027, we've agreed with the Environment Agency that we may need to introduce water restrictions more often to make sure we can maintain vital drinking water supplies during droughts.

5.29 It is not clear how many of the Local Plan's new homes have been already planned for within the WRMP, but the demand forecast [See reference 50] for the WRMP provides a connection forecast for Winchester District of 42,973 household connections in 2039-40 against a 2019-20 baseline of 36,267 (an increase of 6,706). The Local Plan therefore exceeds this.

5.30 In response to the HRA and Sustainability Appraisal (SA) scoping report (see **Appendix C**), Natural England commented that:

"The local plan should recognise the current uncertainty with regards to water resources and the impacts of abstraction and drought on protected sites including the River Itchen SAC. The SA should ensure this issue is considered and include objectives for policy to set strict requirements for water consumption (we would advise all new development adopt a higher standard of water efficiency of 100 litres/per person/day including external water use and re-use in line with Southern Water's Target 100 demand reduction programme) and encourage use of greywater recycling and efficient appliances.

It should also be noted that following the Environment Agencies changes to Southern Water abstraction licences to protect the Itchen SAC, compensation and mitigation packages have been agreed between the Environment Agency, Natural England and Southern Water that will enable sustainability reductions to protect the River Itchen SAC to be implemented while ensuring that Southern Water can meet its statutory duties. Some of

the required compensatory habitat may be implemented along some of the upper un-designated reaches of the Itchen within the District, which may have implications for development affecting that stretch of the river and associated headwaters. It is advised that the SA and local plan HRA further considers this aspect to help inform policy. Further details on locations of this compensatory habitat will be provided once Natural England has had confirmation of its location.”

5.31 It is important to note that if ‘compensation’ has been deemed to be required in response to impacts associated with the Local Plan then this means that adverse effects on the integrity of the River Itchen SAC have not been avoided. The Local Plan would then need to demonstrate “imperative reasons for overriding public interest” (see paragraphs 1.19 and 1.22), something which HRA usually seeks to avoid as this is onerous. Further consultation is required to understand this issue and the implications for the Local Plan HRA.

5.32 Two policies within the Local Plan set water efficiency standards:

- Policy CN3: Energy efficiency standards to reduce carbon emissions: This policy requires non-residential developments to achieve BREEAM excellent. This standard incorporates water efficiency standards and therefore could contribute to mitigation for effects relating to water quality / quantity
- Policy CN4: Water efficiency standards in new developments: This policy requires residential developments to achieve a water efficiency standard of 100 litres/person/day; and refurbishments or other non domestic development to mean BREEAM water efficiency credits (no rating specified). This will contribute to mitigation for effects relating to changes in water quality / quantity.

5.33 The following policy also includes a requirement for developers to confirm water supply:

- Policy NE6: Flooding and flood risk: encourages the use of SuDS and requires developments to ensure that “water supply, surface water drainage and wastewater infrastructure to service new development are provided and connect to the nearest point of adequate capacity where feasible”.

5.34 Southern Water will be need to be consulted (prior to or as part of the Local Plan Regulation 18 consultation). In order to conclude no adverse effects on the integrity of the River Itchen SAC, Southern Water will need to confirm whether they can meet the projected demand for water, taking into account the water efficiency standards required in the Local Plan, and that any measures being relied upon to meet this demand (e.g. the desalination plant) are feasible and certain. These could be demonstrated within a Water Cycle Study. Consultation will also be required with Southern Water and Natural England to understand the work underpinning the identified need for ‘compensatory habitat’, and the implications for the Local Plan HRA.

Run-off

5.35 Direct pollution of the River Itchen SAC could occur due to run-off where development is in close proximity to the river. This would damage habitats (water quality), which would in turn affect the qualifying species of the SAC. This effect has been assessed in relation to physical damage and loss of habitat, and can be sufficiently mitigated by policies within the Local Plan (NE1, NE5, NE17, D5 and D8), such that there will be no adverse effects on the integrity of the SAC as a result of run-off.

Wastewater

5.36 An increase in phosphorus or nitrogen in the River Itchen SAC could occur from residential development discharging waste water into the River Itchen

(likely significant effects will arise from the Local Plan alone and also in combination with other plans and projects).

5.37 A number of wastewater treatment works (WTW) discharge into the River Itchen [See reference 51], as summarised in **Table 5.1**, with others discharging into the wider catchment.

Table 5.1: Wastewater treatment works serving the Plan area that discharge into the River Itchen

WTW	Area served	Residential site allocations in these areas
New Alresford	New Alresford	NA1, NA2
Harestock	Harestock, Kings Worthy, Headbourne Worthy, South Wonston	W1, W2, W4, KW1, KW2, SWO1, SWO3
Morestead Road Winchester	Winchester (Stanmore, Bar End, Badgers Farm, St Cross, Winnall)	W3, W7, W9, W10, W11
Chickenhall Eastleigh	Otterbourne, Shawford, Hursley, Oliver's Battery, Colden Common	O1, CC1, CC2, CC3

5.38 All developments within the Itchen catchment (and the whole Plan area) are required to achieve nutrient neutrality, in line with Natural England's requirements for mitigation, and as set out in Policy NE16: Nutrient Neutrality: water quality effects on the Special Protection Areas (SPAs), Special Areas of Conservation (SACs) and Ramsar sites of the Solent and the River Itchen:

"Planning permission will only be granted where the integrity of nationally protected sites is not adversely affected by new development . When

making planning decisions which may affect these sites the requirements of the Habitat Regulations will be met including the carrying out appropriate assessments.” And

“When assessing applications for development the impacts of increased nutrients from these sites will be considered. Permission will be granted only where effects can either be excluded or, if that is not possible, mitigation by nutrient neutrality is achieved following the guidance provided by Natural England thereby avoiding any adverse impact upon the quality of the water environment of the sites.”

5.39 This policy will ensure that the Local Plan will have no adverse effects on the integrity of the River Itchen SAC, arising from nitrogen or phosphorus.

5.40 In addition to this, Natural England has announced proposals to develop strategic mitigation [\[See reference 52\]](#) [\[See reference 53\]](#) to ensure that developments can achieve nutrient neutrality. As further details become available, policies could be updated to make reference to this.

Solent & Southampton Water SPA/Ramsar, Solent Maritime SAC and Solent & Dorset Coast SPA

Run-off

5.41 As with the River Itchen SAC, water pollution of Solent & Southampton Water SPA/Ramsar and Solent Maritime SAC from direct run-off has been assessed in relation to physical damage and loss of habitat. These effects can

be mitigated through safeguards in Local Plan policy (NE1, NE5, NE17, D5 and D8).

Wastewater

5.42 An increase in phosphorus or nitrogen in Solent & Southampton Water SPA/Ramsar, Solent Maritime SAC and Solent & Dorset Coast SPA could occur from residential development discharging waste water into the River Test, River Itchen, River Meon or River Hamble (Southern Water's Test & Itchen catchment, and East Hampshire catchment). These likely significant effects will arise from the Local Plan alone and also in combination with other plans and projects.

5.43 In addition to the wastewater treatment works discharging into the Itchen catchment (**Table 5.1**), a number of wastewater treatment works (WTW) discharge into the East Hampshire catchment [**See reference 54**] as summarised in **Table 5.2**, with others discharging into the wider catchment.

Table 5.2: Wastewater treatment works serving the Plan area that discharge into Southern Water's East Hampshire Catchment (River Meon & River Hamble)

WTW	Area served	Residential site allocations in these areas
Bishops Waltham	Bishop's Waltham, Waltham Chase, Shirrell Heath, Swanmore	BW1, BW2, BW3, BW4, SW1, WC1, H16
Wickham	Wickham	WK1, WK2, WK4, WK14
Peel Common	Curbridge	SH2, SH5, H18

WTW	Area served	Residential site allocations in these areas
Southwick	Southwick	None
Budds Farm	Waterlooville, Denmead	SH1

5.44 All developments within the East Hampshire catchment (and the whole Plan area) discharge into waters that drain into the Solent and are required to achieve nutrient neutrality, in line with Natural England’s requirements for mitigation, and as set out in Policy NE16: Nutrient Neutrality: water quality effects on the Special Protection Areas (SPAs), Special Areas of Conservation (SACs) and Ramsar sites of the Solent and the River Itchen.

5.45 In addition to this, local authorities and Natural England have been developing strategic mitigation for the Solent [See reference 55], such as wetland creation and woodland planting that would enable ‘credits’ to be purchased by developments in order to become nutrient neutral.

5.46 This requirement for nutrient neutrality will ensure that the Local Plan will have no adverse effects on the integrity of Solent & Southampton Water SPA/Ramsar, Solent Maritime SAC and Solent & Dorset Coast SPA, arising from nitrogen or phosphorus.

Recreation pressure and urban edge effects

5.47 The HRA Screening identified likely significant effects arising from residential development within 5.6km of Solent & Southampton Water SPA/Ramsar (and its FLL), Chichester & Langstone Harbours SPA/Ramsar, Portsmouth Harbour SPA/Ramsar and Solent & Dorset Coast SPA. This applies

to the following site allocations and any development that could occur outside of these, but within the 5.6km zone of influence (ZOI):

- Solent & Southampton Water SPA/Ramsar: H16, H18, SH2 (incl. CU14, CU18, CU24, CU34), SH3, WC1, WK4 (c.3,895 homes plus any outside site allocations).
- Chichester & Langstone Harbours SPA/Ramsar: SH1 (3,000 homes plus any outside site allocations).
- Portsmouth Harbour SPA: H18, SH1, SH3, WK2, WK4 (6,800 homes plus any outside site allocations).
- Solent & Dorset Coast SPA: as for all three of the above (c.6,975 homes plus any outside site allocations).

5.48 To mitigate the effects of residential development within the ZOI of these sites (and other coastal European sites in the Solent), the Solent Recreation Mitigation Strategy is in place. This requires developer contributions from residential developments within 5.6km of the European sites, which fund access management and monitoring at the coastal sites. The mitigation strategy, prepared in 2017, is intended to mitigate c.63,000 new dwellings planned between 2016 and 2034. This was based on a spatial position statement [\[See reference 56\]](#) that included an objectively assessed housing need for Winchester district of 3,375. The Local Plan provides for 15,700 homes over the Plan period, of which c.6,975 would be within the ZOI of the coastal sites. Agreement will need to be reached with Natural England as to how many of the proposed Local Plan homes can be mitigated by the existing mitigation strategy and whether any further work will be required to update the strategy. See ‘next steps’ in **Chapter 6**.

5.49 In addition to the general protection for European sites set out in Policy NE1, the following policies also contribute to mitigation for recreation pressure by encouraging developments to provide green infrastructure with new development, that could reduce visits to the more sensitive European sites:

- Policy D5: Masterplans: requires 'significant development on sites occupied by major landowners/users' to incorporate a green infrastructure strategy, providing an integrated network of green spaces, taking advantage of opportunities for off-site links to the countryside, South Downs National Park where applicable and wider green network, and where necessary providing alternative recreational space.
- Policy NE3: Open space, sport and recreation: sets out standards for the provision of new open space with development.
- Policy NE4: Green and blue infrastructure: sets out principles for new green infrastructure with development.
- Policy NE11: Open space provision for new developments: sets standards for the provision of new open space, which may help to reduce recreation pressure effects.

5.50 Until Natural England has confirmed the extent to which the existing recreation mitigation strategy can be relied upon and/or whether additional work is required to update the strategy, adverse effects on integrity cannot be ruled out in relation to recreation pressure at Solent & Southampton Water SPA/Ramsar (and its FLL), Chichester & Langstone Harbours SPA/Ramsar, Portsmouth Harbour SPA/Ramsar and Solent & Dorset Coast SPA.

Chapter 6

Conclusions and next steps

6.1 The HRA Screening (**Chapter 4**) was unable to rule out likely significant effects in relation to:

- Physical damage and loss of habitat;
- Non-physical disturbance;
- Air pollution;
- Changes in water quantity or quality; or
- Recreation pressure and urban edge effects.

6.2 The Appropriate Assessment in **Chapter 5** considered whether the above likely significant effects will, in light of mitigation and avoidance measures, result in adverse effects on integrity of the European sites either alone or in combination with other plans or projects.

6.3 The Appropriate Assessment concluded that safeguards within Local Plan policy NE1 and NE16 are sufficient to rule out adverse effects on the integrity of European sites relating to the following (alone or in combination with other plans and projects):

- Physical damage and loss of habitat within the European sites, including due to run-off from adjacent development; and
- Changes in water quantity or quality relating to waste water and nitrogen / phosphorus.

6.4 At this stage, it has not been possible to rule out adverse effects on the integrity of European sites, relating to the following effects:

- Physical damage and loss of habitat (effects on FLL) – revisions needed to policy NE1.
- Non-physical disturbance – revisions needed to policy NE1.
- Air pollution – traffic data required.
- Changes in water quantity and quality relating to abstraction from the River Itchen – consultation with Southern Water and Natural England required.
- Recreation pressure and urban edge effects – consultation with Natural England required.

6.5 The following are recommended, to enable the HRA to conclude no adverse effects from the Local Plan either alone or in combination with other plans or projects.

Policy wording

6.6 ‘Policy NE1: Protecting and enhancing biodiversity and the natural environment in the district’ should be amended to:

- Specifically mention the potential for effects on FLL (around River Hamble and River Itchen)
- Indicate that developments need to consider the potential for non-physical disturbance (of European sites and FLL) in proximity to the Itchen and Hamble; the policy / supporting text could list all potential effects, for completeness.

6.7 Natural England has announced proposals to develop strategic mitigation to ensure that developments can achieve nutrient neutrality. As further details become available, policies could be updated to make reference to this.

Traffic data

6.8 Traffic data is required to quantify likely impacts and confirm which roads within 200m of a European site will experience significant increases in traffic as a result of the Local Plan (alone or in combination). If traffic data shows an increase in traffic on roads passing European sites of 1,000 AADT or more, air quality assessment would then be required to inform the Appropriate Assessment.

6.9 Traffic data is required for the following roads where they pass within 200m of European sites:

- Butser Hill SAC: A3
- Chichester & Langstone Harbour SPA/Ramsar: A3(M), A27, A2030, A3023; A259
- New Forest SAC, SPA/Ramsar: A36, M27
- Portsmouth Harbour SPA/Ramsar: A27, M27, M275
- River Itchen SAC: A31, A34, M3, M27
- Solent Maritime SAC: A3(M), A27, A2030, A3023; A259, M27, M271, A35, A36
- Salisbury Plain SAC and Porton Down SPA: A30
- Woolmer Forest SAC and Wealden Heaths SPA: A3, A325

6.10 Some of these sites are outside the Plan area, and will therefore require data other local authorities.

6.11 Air quality assessment, if required, would need to be carried out in line with best practice guidance [\[See reference 57\]](#) [\[See reference 58\]](#).

Consultation

6.12 Agreement will need to be reached with Natural England as to how many of the proposed Local Plan homes can be mitigated by the existing Solent Recreation Mitigation Strategy and whether any further work will be required to update the strategy.

6.13 If Natural England is able to provide a boundary for the proposed River Meon SAC, the HRA will be updated to reflect this.

6.14 Southern Water will be need to be consulted (prior to or as part of the Local Plan Regulation 18 consultation). In order to conclude no adverse effects on the integrity of the River Itchen SAC, Southern Water will need to confirm whether they can meet the projected demand for water, taking into account the water efficiency standards required in the Local Plan, and that any measures being relied upon to meet this demand (e.g. the desalination plant) are feasible and certain. These could be demonstrated within a Water Cycle Study. Consultation will also be required with Southern Water and Natural England to understand the work underpinning the identified need for ‘compensatory habitat’, and the implications for the Local Plan HRA.

European site	Non-physical disturbance	Recreation pressure	Water quality / quantity	Air pollution	Relevant functionally linked land?
Porton Down SAC	Yes			Yes	Yes – outside Plan area (stone curlew)
Portsmouth Harbour SPA / Ramsar	Yes	Yes	Yes	Yes	Yes – outside Plan area (waterbirds)
River Itchen SAC	Yes		Yes	Yes	Yes – within Plan area (otter) – outside Plan area (Atlantic salmon)
Rook Clift SAC				Yes	
Salisbury Plain SAC				Yes	
Shortheath Common SAC		Yes		Yes	
Solent & Dorset Coast SPA	Yes	Yes	Yes	Yes	Yes – outside Plan area (waterbirds)
Solent & Isle of Wight Lagoons SAC		Yes	Yes	Yes	
Solent & Southampton Water SPA / Ramsar	Yes	Yes	Yes	Yes	Yes – outside Plan area (waterbirds)

Appendix A Attributes of European Sites assessed

European site	Non-physical disturbance	Recreation pressure	Water quality / quantity	Air pollution	Relevant functionally linked land?
Solent Maritime SAC			Yes	Yes	
Wealden Heaths Phase 2 SPA	Yes	Yes		Yes	No – supporting habitats are within site boundaries
Woolmer Forest SAC			Yes	Yes	

Butser Hill SAC

A.1 Butser Hill SAC - is an extensive area of semi-natural dry grassland and dense yew woodlands, with smaller elements of chalk heath, deciduous woodland and mixed scrub. It is located within the South Downs National Park, in the east of Hampshire. Butser is the highest point in the National Park and is situated on the chalk which also feeds the Oxenbourne tributary of the River Meon. The chalk grassland component of the site is primarily CG2 *Festuca ovina* – *Avenula pratense* grassland, grazed by sheep and rabbits. The topography of the site is varied, with a wide range of slope gradients and aspects, which in turn generate conditions for high diversity of both vascular and lower flora. The lichen flora associated with chalk grassland is considered the richest in England, whilst a distinctive association of liverworts and mosses occurs on the north-facing slopes.

Table A.2: Attributes of Butser Hill SAC

Site Name (Area, ha)	Qualifying features and conservation objectives	Key vulnerabilities	Non-qualifying habitats and species upon which the qualifying habitats and/or species depend
Butser Hill SAC (237.36ha)	<p><i>Qualifying features:</i></p> <ul style="list-style-type: none"> ■ H4030 European dry heaths ■ H6210 Semi-natural dry grasslands and scrubland facies on calcareous substrates (<i>Festuco-Brometalia</i>) (* important orchid sites) ■ 91J0 <i>Taxus baccata</i> woods of the British Isles <p><i>Conservation objectives:</i></p> <ul style="list-style-type: none"> ■ Ensure that the integrity of the site is maintained or restored as appropriate, and ensure that the site contributes to achieving the Favourable Conservation Status of its Qualifying Features, by maintaining or restoring: 	<p><u>Inappropriate scrub control</u></p> <p>In some localised areas, chalk grassland is suffering from significant encroachment by bramble, gorse and other scrub, and there are indications that its extent is declining. Shading effects from expansion of woodland and scrub will also cause a reduction in diversity in the sward.</p> <p><u>Under grazing</u></p> <p>Condition assessment of some areas suggested that there were distinct areas where the sward height was tussocky and above target. Also, higher than target levels of leaf litter were reported. This suggests that grazing is uneven, or limited, across the site.</p> <p>The importance of rabbits as a grazing animal is noted, but the population has declined markedly due to disease outbreaks. Uneven grazing carries the risk of the sward becoming too tall and grass-dominated, shading out the forbs that are characteristic of the chalk grassland sward.</p>	<p>Natural England's Conservation Objectives: Supplementary Advice for this site [See reference 59] identify the following dependencies:</p> <p><i>Festuco-Brometalia</i> grasslands require thin, well-drained, lime-rich soils associated with chalk and limestone. Most of these calcareous grasslands are maintained by grazing (to control scrub). Yew woodland requires shallow, dry soils usually on chalk or limestone slopes, but in a few areas stands on more mesotrophic soils are found. These habitats are associated with a community of plant species, which need to be maintained as components of the qualifying habitats.</p> <p>Supporting offsite habitat is relevant to this site: Additional areas of calcareous grassland and other species rich grasslands occur near to the SAC. These need to be maintained to support wider populations of the species that</p>

	<ul style="list-style-type: none"> ■ The extent and distribution of qualifying natural habitats; ■ The structure and function (including typical species) of qualifying natural habitats; and ■ The supporting processes on which qualifying natural habitats rely. 	<p><u>Air Pollution: risk of atmospheric nitrogen deposition</u></p> <p>Nitrogen deposition exceeds site relevant critical loads for the <i>Taxus baccata</i> woodlands and is approaching the upper critical load in the chalk grassland.</p> <p>Nitrogen enrichment impacts for chalk grassland can include: increase in tall grasses; decline in diversity; increased mineralisation; N leaching and surface acidification.</p> <p>Nitrogen enrichment impacts for <i>Taxus baccata</i> woodland include: changes in soil processes; nutrient imbalance; altered composition mycorrhiza and ground vegetation.</p> <p>Overall, this creates conditions less favourable to the characteristic vegetation of the SAC features. However, as the sensitive features (<i>Taxus baccata</i> woodlands) are considered to be in favourable condition this requires further investigation to determine the significance level of the threat.</p>	<p>characterise the SAC and maintain the resilience of the habitat.</p>

Chichester and Langstone Harbour SPA/Ramsar

A.2 Chichester and Langstone Harbours SPA/ Ramsar - Chichester and Langstone Harbours Special Protection Area (SPA) is located on the south coast of England in Hampshire and West Sussex. The large, sheltered estuarine basins comprise of extensive sandflats and mudflats exposed at low tide. The two harbours are joined by a stretch of water that separates Hayling Island from the mainland. Tidal channels drain the basin and penetrate far inland. The mudflats are rich in invertebrates and also support extensive beds of algae, especially, eelgrasses (*Zostera* spp.) and *Enteromorpha* species.

Table A.3: Attributes of Chichester and Langstone Harbour SPA/Ramsar

Site Name (Area, ha)	Qualifying features and conservation objectives	Key vulnerabilities	Non-qualifying habitats and species upon which the qualifying habitats and/or species depend
Chichester and Langstone Harbours SPA (5,810.95 ha)	<p><i>Qualifying features:</i></p> <ul style="list-style-type: none"> ■ A157 Bar-tailed godwit <i>Limosa lapponica</i>, Non-breeding ■ A193 Common tern <i>Sterna hirundo</i>, Breeding ■ A160 Curlew <i>Numenius arquata</i>, Non-breeding 	<p><u>Public Access/Disturbance</u></p> <p>Recreational activities can affect annual vegetation of drift lines (H1210) and the vegetation of stony banks (H1220).</p> <p><u>Coastal squeeze</u></p> <p>Habitats are being lost as they are squeezed between rising sea levels and hard coastal defences that are maintained. There is a direct impact due to loss of the SAC habitats such as saltmarsh. In some areas rising sea levels will result in coastal grasslands being lost to more</p>	<p>In general, the qualifying bird species of the SPA rely on:</p> <ul style="list-style-type: none"> ■ The site's ecosystem and hydrology as a whole (see list of habitats below). ■ Maintenance of populations of species that they feed on (see list of diets below).

The habitats that are lost could be created elsewhere, but there is difficulty in finding suitable areas. The neutral grassland habitats will take a long time to create as mitigation, but intertidal habitat can be created relatively quickly. Current compensation provides required habitat for Epoch 1 of the Shoreline Management Plan 2, further investigation is required for Epoch 2 and 3. This project will utilise outputs from Shoreline Management Plans, the Environment Agency's Regional Habitat Creation Project and the New Forest District Council/Channel Coastal Observatory's Solent Dynamic Coast Project.</p> <p><u>Fisheries: Commercial marine and estuarine</u></p> <p>Towed gear, hand gathering of shellfish, bait digging and aquaculture are the main fishery activities in this site.</p> <p><u>Water pollution</u></p> <p>Water pollution affects a range of habitats at the site through eutrophication and toxicity. Sources include both point source discharges (including flood alleviation / storm discharges) and diffuse water pollution from agriculture / road runoff, as well as historic contamination of</p>	<ul style="list-style-type: none"> ■ Off-site habitat, which provide foraging habitat for these species. <p>Open landscape with unobstructed line of sight within nesting, foraging or roosting habitat.</p> <p>There is no Natural England Conservation Objectives: Supplementary Advice for this site. We will further consider the dependencies of the site's qualifying features in the next iteration of the HRA.</p>

Appendix A Attributes of European Sites assessed

Site Name (Area, ha)	Qualifying features and conservation objectives	Key vulnerabilities	Non-qualifying habitats and species upon which the qualifying habitats and/or species depend
	<ul style="list-style-type: none"> ■ The extent and distribution of the habitats of the qualifying features ■ The structure and function of the habitats of the qualifying features ■ The supporting processes on which the habitats of the qualifying features rely ■ The population of each of the qualifying features, and, <p>The distribution of the qualifying features within the site.</p>	<p>marine sediments, primarily from copper and Tributyltin (TBT). A position statement from the Environment Agency and Natural England on water quality in the Solent and housing growth confirms the need to control nitrogen inputs to the Solent from development growth. Environment Agency flood event discharge consents allow untreated waters to be discharged which end up in the SAC and are likely to have a negative impact. There is a threat of spillage from oil transportation and transfer and by the usage by ships and pilotage.</p> <p><u>Climate change</u></p> <p>Climate change has impacts upon coastal species, in that gull and tern colonies are more frequently washed out with raising sea levels when storm surges cause flooding to habitats.</p> <p><u>Changes in species distributions</u></p> <p>Areas of saltmarsh are eroding and decreasing.</p> <p><u>Change to site conditions</u></p> <p>There is an increasing loss of saltmarsh in much of the Solent for reasons unknown, and this needs to be investigated.</p>	

Appendix A Attributes of European Sites assessed

Site Name (Area, ha)	Qualifying features and conservation objectives	Key vulnerabilities	Non-qualifying habitats and species upon which the qualifying habitats and/or species depend
		<p><u>Invasive species</u></p> <p>The highest risk pathways through which marine INNS are introduced and then spread have been identified as: commercial shipping (through release of ballast water, and biofouling on hulls); recreational boating (through biofouling on hulls); aquaculture (through contamination of imported or moved stock - or escaped stock in the case of the pacific oyster), and natural dispersal.</p> <p><u>Biological Resource Use</u></p> <p>Gull egg collecting occurs in some places, and wildfowling occurs in several places. These activities are likely to be disturbing to breeding and wintering birds even though they are licenced/consented at the moment.</p> <p><u>Change in land management</u></p> <p>Changes to land management are likely to occur in areas where tidal flaps/sluices are altered and this results in changes to water levels or salinity of that land. Some sluices are failing, which may also result in changes to water levels or salinity of land. Some ditches and drains are neglected and this can cause difficulties in land management, resulting in changes.</p>	

Appendix A Attributes of European Sites assessed

Site Name (Area, ha)	Qualifying features and conservation objectives	Key vulnerabilities	Non-qualifying habitats and species upon which the qualifying habitats and/or species depend
		<p><u>Inappropriate pest control</u></p> <p>Predator control is decreasing, resulting in increased predation by foxes etc. and this is the likely cause of decrease in successful breeding of gulls and terns.</p> <p><u>Air Pollution: Impact of atmospheric nitrogen deposition</u></p> <p>Nitrogen deposition exceeds site relevant critical loads. Locally observed effects are unknown.</p> <p><u>Direct impact from 3rd party</u></p> <p>Off-roading is causing damage to some areas of grassland. Private sea defences are causing disruption to the natural movement processes of natural materials along the coast. House boats are unlicensed and have the potential to cause damage to intertidal habitats. Fly grazing is causing issues affecting large areas of Chichester Harbour.</p> <p><u>Other</u></p> <p>SAC boundary may not cover the extent of all Annex 1 and Annex 2 features and/or supporting habitats.</p>

East Hampshire Hangers SAC

A.3 East Hampshire Hangers SAC - The East Hampshire Hangers is designated primarily for its examples of beech forests and its mixed woodland associated with base-rich slopes in addition to chalk grassland of importance to orchids, yew forests and its population of Early gentian. The beech forests are extremely rich in terms of vascular plants and include areas with old pollards on former wood-pasture as well as high forest. The sloped mixed woodland is unusual in southern England and notably contains areas of small-leaved lime. The moss flora is richer than on the chalk examples and includes several species that are rare in the lowlands. The Wealden Edge Hangers component of the site contains stands of yew *Taxus baccata* woodland.

Table A.4: Attributes of East Hampshire Hangers SAC

Site Name (Area, ha)	Qualifying features and conservation objectives	Key vulnerabilities	Non-qualifying habitats and species upon which the qualifying habitats and/or species depend
East Hampshire Hangers SAC (561.69 ha)	<p><i>Qualifying features:</i></p> <ul style="list-style-type: none"> ■ H9130 <i>Asperulo-Fagetum</i> beech forests ■ H9180 <i>Tilio-Acerion</i> forests of slopes, screes and ravines * Priority feature ■ H6210 Semi-natural dry grasslands and scrubland facies on calcareous substrates (<i>Festuco-Brometalia</i>) (* important orchid sites) ■ H91J0 <i>Taxus baccata</i> woods of the British Isles * Priority feature <p><i>Conservation objectives:</i></p> <p>Ensure that the integrity of the site is maintained or restored as appropriate, and ensure that the site contributes to achieving the Favourable Conservation Status</p>	<p><u>Air Pollution: risk of atmospheric nitrogen deposition</u></p> <p>Nitrogen deposition exceeds the site-relevant critical load for ecosystem protection and hence there is a risk of harmful effects, but the sensitive features are currently generally considered to be in favourable condition on the site (those few that are unfavourable are unfavourable for specific reasons unrelated to nitrogen). This requires further investigation.</p> <p><u>Invasive species</u></p> <p>A non-native hybrid ivy is smothering out the ground flora and spreading in one of the hangers.</p> <p><u>Forestry and woodland management</u></p> <p>A small portion of the SAC is in unfavourable condition due to lack of understorey. Attempts at providing regeneration have been poorly implemented and in addition parts of this area are thick with ruderal vegetation.</p>	<p>Natural England's Conservation Objectives: Supplementary Advice for this site [See reference 60] identify the following dependencies:</p> <p><i>Festuco-Brometalia</i> grasslands require thin, well-drained, lime-rich soils associated with chalk and limestone. Most of these calcareous grasslands are maintained by grazing (to control scrub). <i>Asperulo-Fagetum</i> beech forests require circumneutral to calcareous soils. Each community has a different associated suite of species which change according to slope and soil type. <i>Tilio-Acerion</i> ravine forests are woods of ash, wych elm and lime. The habitat type typically occurs on nutrient-rich soils that often accumulate in the shady micro-climates towards the bases of slopes and ravines. These habitats are all associated with a community of plant species, which need to be maintained as components of the qualifying habitats. Early gentian requires bare ground or in thin turf that is kept open by a combination of rabbit</p>

Appendix A Attributes of European Sites assessed

Site Name (Area, ha)	Qualifying features and conservation objectives	Key vulnerabilities	Non-qualifying habitats and species upon which the qualifying habitats and/or species depend
	<p>of its Qualifying Features, by maintaining or restoring:</p> <ul style="list-style-type: none"> ■ The extent and distribution of qualifying natural habitats and habitats of qualifying species; ■ The structure and function (including typical species) of qualifying natural habitats; ■ The structure and function of the habitats of qualifying species; ■ The supporting processes on which qualifying natural habitats and the habitats of qualifying species rely; ■ The populations of qualifying species; and <p>The distribution of qualifying species within the site.</p>		<p>or sheep-grazing and trampling by livestock on thin droughted soils.</p> <p>Supporting offsite habitat is relevant to this site: Additional areas of calcareous grassland and other species rich grasslands occur near to the SAC. These need to be maintained to support wider populations of the species that characterise the SAC and maintain the resilience of the habitat.</p>

Emer Bog SAC

A.4 Emer Bog SAC - The site comprises an extensive valley bog together with associated damp acidic grassland, heathland and developing woodland over Bracklesham Beds in the Hampshire Basin. Emer Bog SAC is part of the South Hampshire Lowlands National Character Area (NCA 128).

A.5 Emer Bog is an excellent example of a valley bog with a rich flora and fauna which includes most typical bog species. The main elements of the bog vegetation include a mixed association of sedges, especially white sedge *Carex curta*, bottle sedge *C. rostrata* and star sedge *C. echinata*, with notable quantities of marsh cinquefoil *Comarum palustris* and bogbean *Menyanthes trifoliata*, together with marsh violet *Viola palustris* and southern marsh-orchid *Dactylorhiza praetermissa*. The bog grades downstream into mature alder carr and upstream into heathland.

Table A.5: Attributes of Emer Bog SAC

Site Name (Area, ha)	Qualifying features and conservation objectives	Key vulnerabilities	Non-qualifying habitats and species upon which the qualifying habitats and/or species depend
Emer Bog SAC (36.76 ha)	<p><i>Qualifying features:</i></p> <ul style="list-style-type: none"> ■ H7140 Transition mires and quaking bogs <p><i>Conservation objectives:</i></p>	<p><u>Public Access/Disturbance</u></p> <p>The adoption of the site for informal recreation compounds the difficulties in managing the site, particularly through grazing.</p>	<p>Natural England's Conservation Objectives: Supplementary Advice for this site [See reference 61] identify the following dependencies:</p>

Appendix A Attributes of European Sites assessed

Site Name (Area, ha)	Qualifying features and conservation objectives	Key vulnerabilities	Non-qualifying habitats and species upon which the qualifying habitats and/or species depend
	<p>Ensure that the integrity of the site is maintained or restored as appropriate, and ensure that the site contributes to achieving the Favourable Conservation Status of its Qualifying Features, by maintaining or restoring:</p> <ul style="list-style-type: none"> ■ The extent and distribution of the qualifying natural habitat; ■ The structure and function (including typical species) of the qualifying natural habitat; and ■ The supporting processes on which the qualifying natural habitat rely. 	<p><u>Hydrological changes</u></p> <p>There has been a reduction in the area of Sphagnum-rich vegetation and it is thought that this is due to substantial nutrient enrichment encouraging the growth of Typha. Although the cause of this is uncertain, a more detailed understanding of site hydrology is likely to help clarify reasons.</p> <p><u>Air Pollution: impact of atmospheric nitrogen deposition</u></p> <p>Nitrogen deposition exceeds site relevant critical loads. With respect to transition mire excess nitrogen may negatively alter the vegetation community by detrimentally affecting bryophytes and increasing the abundance of sedges and vascular plants.</p>	<p>Transition mires and quaking bogs can occur in a variety of situations, related to different geomorphological processes: in flood plain mires, valley bogs, basin mires and the lagg zone of raised bogs, and as regeneration surfaces within mires that have been cut-over for peat.</p> <p>The overall vulnerability of this SAC to climate change has been assessed by Natural England (2015) as being high, taking into account the sensitivity, fragmentation, topography and management of its habitats.</p> <p>This habitat requires ongoing cutting or grazing maintain its open character. Additionally, other habitats along with land outside the site boundary will need to be managed in such a way as to reverse the current negative impacts to the water chemistry and hydrology of the mire and prevent further issues occurring. Surrounding habitats should also be managed to support the wider populations of the flora and fauna of the mire</p>

Kingley Vale SAC

A.6 Kingley Vale SAC is one of the sites representing yew woods on chalk, in the central southern part of its UK range. It has been selected primarily because of its size, as it is the largest area of yew woodland in Britain. In addition to the woodland, four nationally uncommon habitats are represented at the site: chalk grassland; chalk heath; juniper scrub and yew scrub.

Table A.6: Attributes of Kingley Vale SAC

Site Name (Area, ha)	Qualifying features and conservation objectives	Key vulnerabilities	Non-qualifying habitats and species upon which the qualifying habitats and/or species depend
Kingley Vale SAC (208.05 ha)	<p><i>Qualifying features:</i></p> <ul style="list-style-type: none"> ■ H6210 Semi-natural dry grasslands and scrubland facies: on calcareous substrates (<i>Festuco-Brometalia</i>) ■ H91J0 <i>Taxus baccata</i> woods of the British Isles <p><i>Conservation objectives:</i></p> <p>Ensure that the integrity of the site is maintained or restored as appropriate, and ensure that the</p>	<p><u>Deer</u></p> <p>Large herds of fallow deer present on the site appear to be a large factor in preventing natural regeneration of the yew trees. Surveys carried out in 2013 recorded little or no regeneration of yew.</p> <p><u>Undergrazing</u></p> <p>Undergrazing is a threat at this site due to the conflicting issues around grazing animals and yew toxicity.</p> <p>Agriculture</p>	<p>Natural England's Conservation Objectives: Supplementary Advice for this site [See reference 62] identify the following dependencies:</p> <p>Yew woodland requires shallow, dry soils usually on chalk or limestone slopes, but in a few areas stands on more mesotrophic soils are found. Semi-natural dry grasslands are generally found on thin, well-drained, lime-rich soils associated with chalk and limestone. These habitats are associated with a community of plant</p>

	<ul style="list-style-type: none">■ the populations of qualifying species; and■ the distribution of qualifying species within the site.	information is available to guide management of these.	<p>complex of buildings. Caves and underground structures may be used for hibernation. The species is very sensitive to disturbance, together with the loss of roost-sites and food resources.</p> <p>The following are important wet features in the landscape around Mottisfont Bats: the channels of the River Test and River Dun, along with the fens, marshy areas, wet grassland and flowing ditches found in the surrounding valley floors. There are also a number of ponds and spring-fed channels running through the woodlands.</p>

New Forest SAC/SPA/Ramsar

A.8 New Forest SAC/ SPA/ Ramsar - The New Forest is a large and complex ecosystem and one of the largest remaining relatively wild areas in the South of England attracting enormous numbers of visitors each year.

Appendix A Attributes of European Sites assessed

A.9 The New Forest SAC supports an extensive and complex mosaic of habitats including wet and dry heaths and associated bogs and mires, wet and dry grasslands, ancient pasture woodlands, frequent permanent and temporary ponds and a network of streams and rivers. These habitats support an exceptional variety of flora and fauna including internationally important populations of breeding and over-wintering birds and other notable species such as southern damselfly, stag beetle and great crested newt.

Table A.8: Attributes of New Forest SAC/SPA/Ramsar

Site Name (Area, ha)	Qualifying features and conservation objectives	Key vulnerabilities	Non-qualifying habitats and species upon which the qualifying habitats and/or species depend
New Forest SAC (29,213.57 ha)	<p><i>Qualifying features:</i></p> <ul style="list-style-type: none"> ■ H7140 Transition mires and quaking bogs ■ H7150 Depressions on peat substrates of the <i>Rhynchosporion</i> ■ H3110 Oligotrophic waters containing very few minerals of sandy plains (<i>Littorelletalia uniflorae</i>) ■ H3130 Oligotrophic to mesotrophic standing waters with vegetation of the <i>Littorelletea uniflorae</i> 	<p><u>Drainage</u></p> <p>A legacy of 150 years of drainage of mires, wet heathlands, wet grasslands and streams to improve grazing has led to a loss of peat, reduction of habitat condition, bracken and scrub encroachment. A programme of restoration has been going on for the past 10 years and around 3500ha of mire and streams has been identified as still requiring restoration.</p> <p>Inappropriate Scrub Control</p> <p>Lack of management and grazing, and inappropriate drainage has led to the loss of open habitats through encroachment of scrub and secondary woodland.</p> <p><u>Fish Stocking</u></p>	<p>Natural England's Conservation Objectives: Supplementary Advice for this site [See reference 64] identify the following dependencies:</p> <p>The New Forest sits in the centre of a dip in the surrounding chalk known as the Hampshire Basin and comprises a series of eroded terraces of soft sedimentary clays and sands capped with flint gravel, brickearth and other superficial deposits. The Soils are mainly acid, poor in nutrients, susceptible to leaching and only slowly permeable with locally enriched areas. This great variation in its soils is reflected in the New Forest's distinctive vegetation. The habitats include lowland</p>

	<p>and/or of the <i>Isoëto-Nanojuncetea</i></p> <ul style="list-style-type: none"> ■ H4010 Northern Atlantic wet heaths with <i>Erica tetralix</i> ■ H4030 European dry heaths ■ H6410 <i>Molinia</i> meadows on calcareous, peaty or clayey-silt-laden soils (<i>Molinion caeruleae</i>) ■ H7230 Alkaline fens ■ H9120 Atlantic acidophilous beech forests with <i>Ilex</i> and sometimes also <i>Taxus</i> in the shrub layer (<i>Quercion roboripetraeae</i> or <i>Ilici-Fagenion</i>) ■ H9130 <i>Asperulo-Fagetum</i> beech forests 	<p>Hatchet Pond, whilst not actively stocked, is managed as a coarse fishery including carp and bream. The common practice of ground baiting, which is popular with carp fisherman, can introduce nutrients and there may also be deliberate extra feeding to encourage growth of specimen sized fish. In addition, benthivorous fish contribute nutrient through their feeding habits. This has contributed to high turbidity and algal biomass putting the submerged flora at risk. Public disturbance and invasive species have also contributed to the declining condition of Hatchet Pond.</p> <p><u>Deer</u></p> <p>High levels of browsing prevent regeneration and cause a decline in the shrub and field layer of woodlands. The Forestry Commission and other landowners are actively managing the deer population and cooperating with existing strategies but levels are still perceived to be high.</p> <p><u>Air Pollution: impact of atmospheric nitrogen deposition</u></p> <p>Air pollution impacts on vegetation diversity. Aerial deposits of nitrogen may exceed the threshold limits above which the quality and character of vegetation begins to be altered</p>	<p>heath, valley and seepage step mire, or fen, and ancient pasture woodland, including riparian and bog woodland and a range of acid to neutral grasslands. These habitats support an exceptionally rich diversity of fauna and flora which for much of the site are dependent on traditional management practices of grazing through Rights of Common complemented by annual heathland burning and cutting programmes. These provide structural diversity and a range of niches for plants and animals to utilise.</p> <p>Changes in surrounding land-use may adversely (directly/indirectly) affect the functioning of qualifying features and its component species.</p> <p>For H3110 - The passage of common eels upstream into Hatchet Pond are being restricted by a sluice</p> <p>For H3130 - Ponds are at risk from inputs and runoff from land adjacent to the SAC</p> <p>Stream and river catchments extend beyond the boundary of the site and water quality and availability can be</p>

Appendix A Attributes of European Sites assessed

Site Name (Area, ha)	Qualifying features and conservation objectives	Key vulnerabilities	Non-qualifying habitats and species upon which the qualifying habitats and/or species depend
	<ul style="list-style-type: none"> ■ H9190 Old acidophilous oak woods with <i>Quercus robur</i> on sandy plains <p><i>Conservation objectives:</i></p> <p>Ensure that the integrity of the site is maintained or restored as appropriate, and ensure that the site contributes to achieving the Favourable Conservation Status of its Qualifying Features, by maintaining or restoring:</p> <ul style="list-style-type: none"> ■ the extent and distribution of qualifying natural habitats and habitats of qualifying species; ■ the structure and function (including typical species) of qualifying natural habitats; ■ the structure and function of the habitats of qualifying species; ■ the supporting processes on which qualifying natural 	<p>and adversely impacted. This could potentially lead to a loss or change of habitat type which in turn will impact on species reliant on that habitat.</p> <p><u>Public Access/Disturbance</u></p> <p>The New Forest attracts high numbers of visitors annually and there is an assumption that disturbance affects SAC habitats through erosion, compaction and damage to vegetation and water bodies. Investigation into understanding the impact of recreation is required and recreation should be managed to minimise the impact and protect the European features. Hatchet pond attracts high numbers of visitors, walkers along the shoreline have eroded the banks and introduced sediment into the water, this together with feeding of birds and fishing activities has polluted the water and put the habitat at risk. Many of the 10 designated campsites within the New Forest are located in sensitive areas and have impoverished vegetation due to trampling and infrastructure. Sites in or adjacent to pasture woodland in particular are likely to progressively decline due to the impact on tree regeneration, levels of dead wood, lichens and ground flora.</p>	<p>impacted by changes anywhere within the catchment. Changes outside of the site can affect the hydrological regime within the site and have significant implications for the assemblage of characteristic plants and animals present. Off-site land use change driven by the planning process or caused by other activities such as agriculture, recreational demands, or infrastructure provision need to take account of this connectivity and not be to the detriment of the ongoing structure and function of the habitats on-site. Consideration needs to be given to both direct and indirect impacts on the SAC features</p>

Appendix A Attributes of European Sites assessed

Site Name (Area, ha)	Qualifying features and conservation objectives	Key vulnerabilities	Non-qualifying habitats and species upon which the qualifying habitats and/or species depend
	<p>habitats and the habitats of qualifying species rely;</p> <ul style="list-style-type: none"> ■ the populations of qualifying species; and ■ the distribution of qualifying species within the site. 	<p><u>Change in land management</u></p> <p>Restoration of conifer plantation to heathland and grassland habitats is taking place throughout the New Forest on private land, on the adjacent commons and on the Crown Lands where the Verderers Enclosures are being returned to open forest. Following initial felling there is often extensive regeneration of conifer which requires management. Lack of funds for follow-up management could lead to a failure of the restoration.</p> <p><u>Water Pollution</u></p> <p>Many villages have properties that are not on mains sewerage and have domestic treatment units which discharge into ditches and streams that are either within or flow into the SAC. The ditches and streams have seasonal flow and this in combination with a number of properties all discharging into the same channel could lead to an increase in nutrient levels impacting on the habitats they flow through, reducing species richness and diversity.</p> <p><u>Forestry and woodland management</u></p> <p>Lack of management of woodlands in private ownership has led to loss of characteristic ground flora and shrubs and threat from non-</p>	

Appendix A Attributes of European Sites assessed

Portsmouth Harbour SPA/Ramsar

A.11 Portsmouth Harbour SPA/ Ramsar - Portsmouth Harbour is a large, industrialised estuary, with internationally and nationally important numbers of birds. Together with the adjacent Chichester and Langstone Harbours, it forms one of the most important sheltered intertidal areas on the south coast of England. Portsmouth Harbour SPA is composed of extensive intertidal mudflats and sandflats with seagrass beds, areas of saltmarsh, shallow coastal waters, coastal lagoons and coastal grazing marsh. At low tide the extensive mudflats are exposed, the water drained by channels and creeks uniting to form a narrow exit into the Solent. There is comparatively little freshwater input to Portsmouth Harbour. The largest input is the River Wallington, which flows into Fareham Creek in the north-west of Portsmouth Harbour. The estuarine sediments support rich populations of intertidal invertebrates, which provide an important food source for overwintering birds. There are approximately 77 ha of seagrass beds in Portsmouth Harbour, which are found mainly in the north-west of the harbour. These beds include both *Zostera marina* (found on the low shore) and *Zostera noltii* (on the upper to mid shore). The seagrass beds are amongst the most extensive in Britain and are an important food source for dark-bellied Brent goose. The saltmarsh areas are mainly comprised of cordgrass (*Spartina*) swards and provide feeding and roosting areas for overwintering birds.

Table A.10: Attributes of Portsmouth Harbour SPA/Ramsar

Site Name (Area, ha)	Qualifying features and conservation objectives	Key vulnerabilities	Non-qualifying habitats and species upon which the qualifying habitats and/or species depend
Portsmouth Harbour SPA (1,249.6 ha)	<p><i>Qualifying features:</i></p> <ul style="list-style-type: none"> ■ A046a <i>Branta bernicla bernicla</i>; Dark-bellied brent goose (Non-breeding) ■ A069 <i>Mergus serrator</i>; Red-breasted merganser (Non-breeding) ■ A149 <i>Calidris alpina alpina</i>; Dunlin (Non-breeding) ■ A156 <i>Limosa limosa islandica</i>; Black-tailed godwit (Non-breeding) <p><i>Conservation objectives:</i></p> <p>Ensure that the integrity of the site is maintained or restored as appropriate, and ensure that the site contributes to achieving the aims of the Wild Birds Directive, by maintaining or restoring:</p>	<p><u>Public Access/Disturbance</u></p> <p>Recreational activities can affect annual vegetation of drift lines (H1210) and the vegetation of stony banks (H1220).</p> <p><u>Coastal squeeze</u></p> <p>Habitats are being lost as they are squeezed between rising sea levels and hard coastal defences that are maintained. There is a direct impact due to loss of the SAC habitats such as saltmarsh. In some areas rising sea levels will result in coastal grasslands being lost to more saline grasslands. The habitats that are lost could be created elsewhere, but there is difficulty in finding suitable areas. The neutral grassland habitats will take a long time to create as mitigation, but intertidal habitat can be created relatively quickly. Current compensation provides required habitat for Epoch 1 of the Shoreline Management Plan 2, further investigation is required for Epoch 2 and 3. This project will utilise outputs from Shoreline Management Plans, the Environment Agency's Regional Habitat Creation Project</p>	<p>In general, the qualifying bird species of the SPA rely on:</p> <ul style="list-style-type: none"> ■ The site's ecosystem and hydrology as a whole (see list of habitats below). ■ Maintenance of populations of species that they feed on (see list of diets below). ■ Off-site habitat, which provide foraging habitat for these species. <p>Open landscape with unobstructed line of sight within nesting, foraging or roosting habitat.</p> <p>There are no Natural England Conservation Objectives: Supplementary Advice for this site. We will further consider the dependencies of the site's qualifying features in the next iteration of the HRA.</p>

River Itchen SAC

A.12 River Itchen SAC - The River Itchen is one of the `classic` chalk rivers of southern England, drawing most of its character from this geological stratum. The Itchen supports an abundant and exceptionally species rich aquatic flora. It has a primary notification for its river habitat, at SSSI level (chalk river type) and also under Habitats Directive Annex I (Code H3260, watercourses with Ranunculion and Batrachion vegetation). This habitat notification comprises the river channel, its banks and parts of its riparian zone. In addition, parts of the floodplain are notified for their wetland habitat, and the river discharges via Southampton Water into the Solent which has a range of habitat designations.

Table A.11: Attributes of River Itchen SAC

Site Name (Area, ha)	Qualifying features and conservation objectives	Key vulnerabilities	Non-qualifying habitats and species upon which the qualifying habitats and/or species depend
River Itchen SAC (303.98 ha)	<p><i>Qualifying features:</i></p> <ul style="list-style-type: none"> ■ H3260 Water courses of plain to montane levels with the Ranunculion fluitantis and Callitricho-Batrachion vegetation ■ S1044 Southern damselfly Coenagrion mercuriale 	<p><u>Water Pollution</u></p> <p>The Diffuse Water Pollution Plan identifies numerous issues with water quality, in addition to point sources from Waste Water Treatment Works. The Plan is a critical document to achieve favourable condition, and action-owners were consulted as part of the process of revising the plan. Pollution causes excessive algal growth, smothering macrophytes, and increased BOD, decreasing oxygen availability for spawning gravels used by salmon and trout.</p>	<p>Natural England's Conservation Objectives: Supplementary Advice for this site [See reference 67] identify the following dependencies:</p> <p>The Itchen is mainly spring-fed and has only a narrow range of seasonal variation in physical and chemical characteristics. The water is of high quality, being naturally base-rich and of great clarity; and its temperature is relatively constant, with dissolved</p>

Site Name (Area, ha)	Qualifying features and conservation objectives	Key vulnerabilities	Non-qualifying habitats and species upon which the qualifying habitats and/or species depend
	<ul style="list-style-type: none"> ■ The structure and function (including typical species) of qualifying natural habitats; ■ The structure and function of the habitats of qualifying species; ■ The supporting processes on which qualifying natural habitats and the habitats of qualifying species rely; ■ The populations of qualifying species; and ■ The distribution of qualifying species within the site. 	<p>causing impoundment, siltation and interruptions to biological movements, over-deepening, over-widening and straightening of channels, and bank re-sectioning and reinforcement.</p> <p><u>Siltation</u></p> <p>Siltation resulting from a variety of factors (direct inputs of silt into the system from land use, runoff from diffuse sources, deposition arising from impoundments and overwide channels) is a widespread problem affecting the Annex I river habitat, with consequences for macrophytes, southern damselfly habitat (where in ditches) and spawning gravels for fish.</p> <p><u>Overgrazing</u></p> <p>Impacts of over-grazing on river banks and wet meadow systems, removing riparian and meadow habitat and causing runoff into watercourses.</p> <p><u>Water abstraction</u></p> <p>Abstraction modifies the natural flow regime on which the Annex I river habitat depends for its proper functioning. Impacts may occur on habitat character and habitat extent, within the channel or in riparian wetland areas. All parts</p>	<p>tributaries may not fall within the site boundary, yet a range of species characteristic of the site may use these areas for spawning and juvenile development and be critical for sustaining populations within the site. Fully developed riparian zones are essential to site integrity, yet part of this zone may lie outside of the site boundary, particularly if the river channel is operating under natural processes and moves laterally over time within the floodplain. The conditions experienced by long-distance migratory species (such as salmon, sea and river lampreys, allis and twaite shads and eels) outwith the site (through the saline transition zone, estuary, coastal waters and into the high seas) are critical to the well-being of populations within the site. Off-site influences that may impact on the well-being of the population within the site may include, but not limited to, entrainment, temperature, water quality, mortality from exploitation. The adjacent habitat is in hydrological continuity with the river. The river floodplain comprises characteristic vegetation types that</p>

Appendix A Attributes of European Sites assessed

Site Name (Area, ha)	Qualifying features and conservation objectives	Key vulnerabilities	Non-qualifying habitats and species upon which the qualifying habitats and/or species depend
		<p>of the flow regime may be affected but low-to-intermediate flows are most likely to be significantly impacted. Abstraction should not impact on floodplain SAC features such as southern damselfly, as well as riverine features such as salmon. Effects on the habitat can have various effects on individual notified species. Activities outside of the SAC may also have detrimental impacts on site features and habitats. Natural England does not endorse any particular solution at this time.</p> <p><u>Inappropriate weed control</u></p> <p>Management of aquatic weed for fishery activities affects protected habitats e.g. Ranunculus. This activity is currently exempted under the OLDs list (Operations Likely to Damage), and the extent and level of impacts on the watercourse is not conclusively known.</p> <p><u>Hydrological changes</u></p> <p>Some locations on the floodplains are too dry, with reasons not clear - impacts on ditches (decreased flowing water) for southern damselfly and meadow flora.</p> <p><u>Inappropriate water levels</u></p>	<p>reflect the natural variation in topographical and hydrological conditions. The fen habitats show characteristic zonations of vegetation types arising from hydrological factors and the zonation is not truncated or fragmented by land use or management factors.</p>

Appendix A Attributes of European Sites assessed

Site Name (Area, ha)	Qualifying features and conservation objectives	Key vulnerabilities	Non-qualifying habitats and species upon which the qualifying habitats and/or species depend
		<p>Water levels are not appropriate. The Water Level Management Plan (Natural England with Environment Agency) agreed options to re-wet the floodplain, benefitting flora and connecting habitat for southern damselfly. These need re-appraisal and implementation where possible.</p> <p><u>Change in land management</u></p> <p>Risk of non-compliance with HLS agreements may be affecting water quality of the river and floodplain carriers.</p> <p><u>Inappropriate cutting/mowing</u></p> <p>There are some instances of inappropriate management of riverbanks, which impacts on marginal habitat, with consequences for riparian and in-channel biota. These affect the biota using the riparian zone directly, and the biota of the river channel in terms of reducing bankside cover and enhancing silt inputs. Better bankside management can help prevent runoff from adjacent fields into the river, protecting water quality.</p> <p><u>Invasive species</u></p> <p>The presence of signal crayfish in parts of the catchment is suspected posing a significant risk to the white-clawed crayfish population through crayfish plague. However, white-</p>	

Appendix A Attributes of European Sites assessed

Site Name (Area, ha)	Qualifying features and conservation objectives	Key vulnerabilities	Non-qualifying habitats and species upon which the qualifying habitats and/or species depend
		<p>clawed crayfish populations are fragmented, and therefore direct impacts from signals are suspected not to be significant. Also, there are widespread issues with Himalayan and orange balsam along the riparian corridor but the extent of the problem is unknown.</p> <p><u>Undergrazing</u></p> <p>Undergrazing impacts on wet meadow systems, causing degradation of southern damselfly habitat in particular. Bridges are required to access and manage sites and prevent SAC condition to deteriorate. This requires special project funding, which is currently prohibited in HLS agreements.</p> <p><u>Inappropriate ditch management</u></p> <p>Some ditches are not managed, leading to reed encroachment, reducing flow and therefore prohibiting southern damselfly breeding habitat.</p> <p><u>Inappropriate scrub control</u></p> <p>Inappropriate scrub control impacts particularly around ditches for southern damselfly, where scrub shades some ditches, preventing growth of marginal plants for egg-laying, and reduce flow in ditches.</p>

		<p><u>Forestry and woodland management</u></p> <p>Some parts of channel are excessively shaded by wet woodland, impacting on the macrophyte community. The River Restoration Strategy identifies some stretches where excessive shading is causing a problem, but it is important to look at whole catchment, and assess against all SAC features when reviewing locations/actions. Some stretches may benefit from tree planting to reduce water temperatures, particularly in</p>	

Rook Clift SAC

A.13 Rook Clift SAC is a forest of slopes, screes and ravines, associated with rocky slopes on the base rich soils of the South Downs. This ancient woodland is dominated by large coppice stools of Large-leaved lime, together with Ash and some Beech. The presence of Large-leaved lime as a canopy dominant makes this woodland virtually unique. The site also supports a number of mollusc species, notably the Cheese snail and a rich bryophyte flora.

Table A.12: Attributes of Rook Clift SAC

		any) from suspected local sources as this could be adding to the critical load.	

Solent and Dorset Coast SPA

A.16 Solent and Dorset Coast SPA - The site is located on the south coast within the English Channel and extends from the Isle of Purbeck in the West to Bognor Regis in the East, following the coastline on either side to the Isle of Wight and into Southampton Water.

A.17 The Solent and Dorset Coast Special Protection Area (SPA) was classified on 16 January 2020. It was classified as described in the departmental brief with boundary amendments, as described in appendix 4 of the consultation report. There are already four Special Protection Areas (SPAs) within the Greater Solent that are designated for breeding terns (the qualifying features of this SPA). These are Chichester & Langstone Harbours SPA (for Sandwich and Little tern), the Solent and Southampton Water SPA (for Common, Sandwich and Little tern) and Pagham Harbour SPA (Little tern). The fourth associated SPA lies within Poole Harbour (Common Tern and Sandwich tern). The new SPA covers the principal sea area that the breeding terns use for foraging during April-September.

Table A.15: Attributes of Solent and Dorset SPA

Site Name (Area, ha)	Qualifying features and conservation objectives	Key vulnerabilities	Non-qualifying habitats and species upon which the qualifying habitats and/or species depend
Solent and Dorset Coast SPA (88,980.55 ha)	<p><i>Qualifying features:</i></p> <p>The site regularly supports more than 1% of the Great Britain breeding populations of the following three species listed in Annex I of the Birds Directive:</p> <ul style="list-style-type: none"> ■ A193(B) <i>Sterna Hirundo</i>, Common tern ■ A191(B) <i>Sterna sandvicensis</i>, Sandwich tern ■ A195(B) <i>Sterna albifrons</i>, Little tern <p><i>Conservation objectives:</i></p> <p>Ensure that the integrity of the site is maintained or restored as appropriate, and ensure that the site contributes to achieving the aims of the Wild Birds Directive, by maintaining or restoring:</p>	<p>Not yet identified for this SPA, however these are likely to be similar to those listed for Solent and Southampton Water SPA, where these relate to the qualifying features of this SPA.</p>	<p>In general, the qualifying bird species of the SPA rely on:</p> <ul style="list-style-type: none"> ■ The site's ecosystem and hydrology as a whole (see list of habitats below). ■ Maintenance of populations of species that they feed on (see list of diets below). ■ Off-site habitat, which provide foraging habitat for these species. ■ Open landscape with unobstructed line of sight within nesting, foraging or roosting habitat. <p>There are no Natural England Conservation Objectives: Supplementary Advice for this site. We will further consider the dependencies of the site's qualifying features in the next iteration of the HRA, where information is available.</p>

Site Name (Area, ha)	Qualifying features and conservation objectives	Key vulnerabilities	Non-qualifying habitats and species upon which the qualifying habitats and/or species depend
		<p>on hulls); aquaculture (through contamination of imported/moved stock or escaped stock), and natural dispersal. If present, INNS pose a threat to SAC lagoon habitats by displacing or preying upon native species, by destroying habitats, or by introducing new diseases or parasites.</p> <p><u>Air pollution</u></p> <p>Nitrogen deposition exceeds the site-relevant critical load for ecosystem protection and hence there is a risk of harmful effects, but the sensitive features are currently considered to be in favourable condition on the site. This requires further investigation.</p>	

Solent Maritime SAC

A.19 Solent Maritime SAC - The Solent is a complex site encompassing a major estuarine system on the south coast of England. The Solent and its inlets are unique in Britain and Europe for their hydrographic regime with double tides, as well as for the complexity of the marine and estuarine habitats present within the area. Sediment habitats within the estuaries include extensive areas of intertidal mudflats, often supporting eelgrass *Zostera* spp. and green algae, saltmarshes and natural shoreline transitions, such as drift line vegetation. The SAC forms part of the Solent & Southampton Water SPA/Ramsar.

Appendix A Attributes of European Sites assessed

A.20 All four species of cordgrass found within the UK are present within the Solent and it is one of only two UK sites with significant amounts of the native small cordgrass *Spartina maritima*. The SAC contains rich intertidal mudflats, saltmarsh, shingle beaches and adjacent coastal habitats, including grazing marsh, reedbeds and damp woodland.

Table A.17: Attributes of Solent Maritime SAC

Site Name (Area, ha)	Qualifying features and conservation objectives	Key vulnerabilities	Non-qualifying habitats and species upon which the qualifying habitats and/or species depend
Solent Maritime SAC (11,243.12 ha)	<p><i>Qualifying features:</i></p> <ul style="list-style-type: none"> ■ H1110 Sandbanks which are slightly covered by sea water all the time ■ H1320 <i>Spartina</i> swards (<i>Spartinion maritimae</i>) ■ H1330 Atlantic salt meadows (<i>Glauco-Puccinellietalia maritimae</i>) ■ S1016 <i>Vertigo moulinsiana</i>: Desmoulin's whorl snail ■ H1130 Estuaries 	<p><u>Public Access/Disturbance</u></p> <p>Recreational activities can affect annual vegetation of drift lines (H1210) and the vegetation of stony banks (H1220).</p> <p><u>Coastal squeeze</u></p> <p>Habitats are being lost as they are squeezed between rising sea levels and hard coastal defences that are maintained. There is a direct impact due to loss of the SAC habitats such as saltmarsh. In some areas rising sea levels will result in coastal grasslands being lost to more saline grasslands. The habitats that are lost could be created elsewhere, but there is difficulty in finding suitable areas. The neutral grassland habitats will take a long time to create as mitigation, but intertidal habitat can be created relatively quickly. Current</p>	<p>The qualifying habitats of the SAC are reliant a range of coastal factors, including salinity, sedimentation, tide, sea level, turbidity and elevation, which influence the interdependent intertidal, subtidal and terrestrial habitats. These factors influence the complex interdependent intertidal, subtidal and terrestrial habitats present along the coast.</p> <p>There are no Natural England Conservation Objectives: Supplementary Advice for this site. 	<ul style="list-style-type: none"> ■ the extent and distribution of qualifying natural habitats and habitats of qualifying species ■ the structure and function (including typical species) of qualifying natural habitats ■ the structure and function of the habitats of qualifying species ■ the supporting processes on which qualifying natural habitats and the habitats of qualifying species rely ■ the populations of qualifying species; and ■ the distribution of qualifying species within the site. 	<p>transfer and by the usage by ships and pilotage.</p> <p><u>Changes in species distributions</u></p> <p>Areas of saltmarsh are eroding and decreasing.</p> <p><u>Climate change</u></p> <p>Climate change has resulted in rising sea level causing flooding to habitats.</p> <p><u>Change to site conditions</u></p> <p>There is an increasing loss of saltmarsh in much of the Solent for reasons unknown, and this needs to be investigated.</p> <p><u>Invasive species</u></p> <p>The highest risk pathways through which marine INNS are introduced and then spread have been identified as: commercial shipping (through release of ballast water, and biofouling on hulls); recreational boating (through biofouling on hulls); aquaculture (through contamination of imported or moved stock - or escaped stock in the case of the pacific oyster), and natural dispersal.</p> <p><u>Direct land take from development</u></p>	

Appendix A Attributes of European Sites assessed

Site Name (Area, ha)	Qualifying features and conservation objectives	Key vulnerabilities	Non-qualifying habitats and species upon which the qualifying habitats and/or species depend
		<p>Private sea defences are causing disruption to the natural processes of allowing erosion to move sediments around the SAC.</p> <p><u>Change in land management</u></p> <p>Changes to land management are likely to occur in areas where tidal flaps/sluices are altered and this results in changes to water levels or salinity of that land. Some sluices are failing, which may also result in changes to water levels or salinity of land. Some ditches and drains are neglected and this can cause difficulties in land management, resulting in changes.</p> <p><u>Air Pollution</u></p> <p>Impact of atmospheric nitrogen deposition</p> <p>Nitrogen deposition exceeds site relevant critical loads. Locally observed effects are unknown.</p> <p><u>Hydrological changes</u></p> <p>Titchfield Haven has a high level of water abstraction licences - if all were used then water levels would be too low in the SAC. Percolation of sea water through sea walls is causing saline intrusion into non-saline grassland habitats and changing them.</p>	

Appendix A Attributes of European Sites assessed

Site Name (Area, ha)	Qualifying features and conservation objectives	Key vulnerabilities	Non-qualifying habitats and species upon which the qualifying habitats and/or species depend
		<p><u>Direct impact from 3rd party</u></p> <p>Off-roading is causing damage to some areas of grassland. Private sea defences are causing disruption to the natural movement processes of natural materials along the coast. House boats are unlicensed and have the potential to cause damage to intertidal habitats. Fly grazing is causing issues affecting large areas of Chichester Harbour.</p> <p><u>Extraction: non-living resources</u></p> <p>Shingle extraction for aggregates may have an adverse impact upon intertidal fauna and flora and may affect the movement of coastal sediments that would in turn have an impact upon intertidal habitats.</p> <p><u>Other</u></p> <p>SAC boundary may not cover the extent of all Annex 1 and Annex 2 features and/or supporting habitats.</p>	

Solent and Southampton Water SPA/Ramsar

A.21 Solent and Southampton Water SPA/ Ramsar - The site comprises of estuaries and adjacent coastal habitats including intertidal flats, saline lagoons, shingle beaches, saltmarsh, reedbeds, damp woodland, and grazing marsh. The diversity of habitats support internationally important numbers of wintering waterfowl, important breeding gull and tern populations and an important assemblage of rare invertebrates and plants.

Table A.18: Attributes of Solent and Southampton Water SPA/Ramsar

Site Name (Area, ha)	Qualifying features and conservation objectives	Key vulnerabilities	Non-qualifying habitats and species upon which the qualifying habitats and/or species depend
Solent and Southampton Water SPA (5,401.12 ha)	<p><i>Qualifying features:</i></p> <ul style="list-style-type: none"> ■ A046a(NB) <i>Branta bernicla bernicla</i>: Dark-bellied brent goose ■ A052(NB) <i>Anas crecca</i>: Eurasian teal ■ A156(NB) <i>Limosa limosa islandica</i>: Black-tailed godwit ■ Waterbird assemblage 	<p><u>Public Access/Disturbance</u></p> <p>Recreational activities can affect annual vegetation of drift lines (H1210) and the vegetation of stony banks (H1220).</p> <p><u>Coastal squeeze</u></p> <p>Habitats are being lost as they are squeezed between rising sea levels and hard coastal defences that are maintained. There is a direct impact due to loss of the SAC habitats such as saltmarsh. In some areas rising sea levels will result in coastal grasslands being lost to more saline grasslands. The habitats that are lost</p>	<p>In general, the qualifying bird species of the SPA rely on:</p> <ul style="list-style-type: none"> ■ The site's ecosystem and hydrology as a whole (see list of habitats below). ■ Maintenance of populations of species that they feed on (see list of diets below). ■ Off-site habitat, which provide foraging habitat for these species.

	<p>aims of the Wild Birds Directive, by maintaining or restoring;</p> <ul style="list-style-type: none"> ■ The extent and distribution of the habitats of the qualifying features ■ The structure and function of the habitats of the qualifying features ■ The supporting processes on which the habitats of the qualifying features rely ■ The population of each of the qualifying features, and, ■ The distribution of the qualifying features within the site. 	<p>There is only partial coverage of the SPA for monitoring of Annex 1 birds and those areas are reliant on volunteer recorders; there is a need for a more strategic, long-term approach to monitoring.</p> <p><u>Public access, disturbance</u></p> <p>Visitor access provision is not currently coordinated between sites or managed so as to reduce impacts on ground-nesting birds.</p> <p><u>Military</u></p> <p>There is currently poor coordination between management for military training purposes and nature conservation management at Woolmer Forest and scope for significant gains with closer working between partners. The production of an integrated management plan is needed.</p> <p><u>Wildfire / arson</u></p> <p>Wildfire is a natural hazard identified in the National Risk Assessment / Register and Community Risk Registers. Wildfires in the south of England are likely to increase as identified in the Climate Change Risk Assessment (CCRA). Wildfires can be a serious risk to human life, residential and commercial property and critical national</p>	<p>mixture of heaths, oak and birch woodland, mature conifer woodlands, pastures and wetlands.</p> <p>The component parts of the SPA have extensive areas of lowland heath which is similar in character to the nearby heathland complexes at Thursley, Hankley and Frensham Commons SPA and the Thames Basin Heaths SPA.</p> <p>Dartford warbler are strongly associated with lowland heaths with extensive patches of mature gorse with an abundance of favoured invertebrate prey items such as spiders. However, they will also nest in areas of mature heather, clearings in forestry plantations and patches of bracken.</p> <p>Nightjars are migratory, spending the winter months feeding in parts of Africa. The species is considered to be vulnerable to the effects of long-term climate change on drought-prone areas of Africa and desert expansion. Nightjar regularly utilise areas across the SPA for nesting and feeding. Favoured areas of habitat are areas of heath with high structural diversity including bare</p>

Appendix A Attributes of European Sites assessed

Site Name (Area, ha)	Qualifying features and conservation objectives	Key vulnerabilities	Non-qualifying habitats and species upon which the qualifying habitats and/or species depend
		<p>infrastructures, as well as being a high risk threat to reptile populations, inverts and plant diversity resulting in significant habitat loss for Annex 1 birds. Open heath is the predominant risk (dry and wet heath, peat habitats) as well as young coniferous woodland. Impacts can last for many years for example by the wholesale removal of all gorse and heather seedbank.</p>	<p>patches or short vegetation, but they will also utilise clearings in woods, broad rides in conifer plantations and sparsely vegetated areas.</p> <p>The woodlark has benefited from rotational management of conifer plantations where it can utilise recently felled areas and areas of young regrowth for nesting. Woodlarks favour areas of short vegetation or sparsely-vegetated areas on heaths with scattered trees for use as song-posts. They feed on seeds and small invertebrates. Numbers of woodlarks tend to fluctuate over time in relation to successional development of heaths and plantations, with large numbers often present following heath fires or tree clearance.</p> <p>Nightjar and Woodlark favour large areas of open terrain, largely free of obstructions, in and around its nesting, roosting and feeding areas. They seek out places where there is an unobstructed line of sight in nesting, feeding or roosting habitat so that they are able to detect approaching predators</p>

Appendix A Attributes of European Sites assessed

Site Name (Area, ha)	Qualifying features and conservation objectives	Key vulnerabilities	Non-qualifying habitats and species upon which the qualifying habitats and/or species depend
			<p>and to ensure visibility of displaying behaviour. An open landscape may also be required to facilitate movement of birds between the SPA and any off-site supporting habitat ('functionally-linked land'). Woodlark will often utilise areas adjacent to heathland for feeding, including areas of short grassland, stubble fields or weedy margins of arable fields, golf courses and bare areas in quarry sites. Such areas may be of critical importance in sustaining populations, particularly during winter months. An open landscape may also facilitate movement of birds between the SPA and any off-site supporting habitat.</p> <p>Although they will utilise enclosed features such as clearings in conifer plantations, Dartford warbler favour large areas of open terrain, largely free of obstructions, in and around nesting, roosting and feeding areas. They will benefit from availability of an unobstructed line of sight within nesting, feeding or roosting to enable birds to detect approaching predators, or to ensure visibility of displaying behaviour. It will also be beneficial to maintain and</p>

Appendix B

Screening matrices

Policies

B.1 Rows with no colour indicate no likely significant effects; orange indicates that likely significant effects cannot be ruled out (Appropriate Assessment is required); grey indicates safeguards/mitigation provided within policies.

Table B.1: Screening matrix - policies

Policy	Likely activities to result as a consequence of the proposal	Likely effect if proposal is implemented	Can likely significant effects be ruled out? (If not, then Appropriate Assessment is required)
Policy SP1: Vision and objectives	None – this policy will not result in new development.	None	Yes
Policy SP2: Spatial strategy and development principles	None – this policy sets out the overall spatial strategy for the Plan area but will not itself result in development.	None	Yes Note that the quantum of housing provision referred to in this policy is assessed in relation to Policy H1.
Policy SP3: Development in the countryside	Agricultural, employment, tourism and/or residential development Changes in vehicle traffic Changes in water use	Air pollution Changes in water quality / quantity Non-physical disturbance	No

Appendix B Screening matrices

Policy	Likely activities to result as a consequence of the proposal	Likely effect if proposal is implemented	Can likely significant effects be ruled out? (If not, then Appropriate Assessment is required)
	Changes in land use	Physical damage / loss Fragmentation / severance Recreation pressure / urban edge effects	
Policy CN1: Mitigating and adapting to climate change	None – this policy will not result in new development.	None	Yes This policy requires development (excluding household extensions) to demonstrate that water use management and conservation has been fully considered; and what measures have been taken to reduce the impact of flooding e.g. through the use of SuDS. This may contribute to mitigation for effects relating to changes in water quality / quantity.
Policy CN2: Energy Hierarchy	None – this policy will not result in new development.	None	Yes
Policy CN3: Energy efficiency standards to reduce carbon emissions	None – this policy will not result in new development	None	Yes This policy requires non-residential developments to achieve BREEAM excellent. This standard incorporates water efficiency standards and therefore could contribute to mitigation for effects relating to water quality / quantity.
Policy CN4: Water efficiency standards in new developments	None – this policy will not result in new development.	None	Yes This policy requires residential developments to achieve a water efficiency standard of 100 litres/person/day; and

Appendix B Screening matrices

Policy	Likely activities to result as a consequence of the proposal	Likely effect if proposal is implemented	Can likely significant effects be ruled out? (If not, then Appropriate Assessment is required)
			refurbishments or other non domestic development to mean BREEAM water efficiency credits (no rating specified). This will contribute to mitigation for effects relating to changes in water quality / quantity.
Policy CN5: Renewable and low carbon energy schemes	Renewable energy development (mainly solar) Changes in vehicle traffic Increase in lighting/glare	Air pollution Physical damage and loss of habitat Non-physical disturbance	No
Policy CN6: Micro energy generation schemes	Micro-energy development (e.g. solar, ground/air source heat pumps, small scale hydroelectric schemes or biomass)	Air pollution Physical damage or loss of habitat Non-physical disturbance	No
Policy CN7: Energy storage	Energy storage development	Physical damage or loss of habitat Non-physical disturbance	No
Policy D1: High quality, well designed and inclusive places	None – this policy sets out design principles for new development but will not	None	Yes

Appendix B Screening matrices

Policy	Likely activities to result as a consequence of the proposal	Likely effect if proposal is implemented	Can likely significant effects be ruled out? (If not, then Appropriate Assessment is required)
	itself result in new development.		
Policy D2: Design principles for Winchester town	None – this policy sets out design principles for new development but will not itself result in new development.	None	Yes
Policy D3: Design principles for South Hampshire urban areas	None – this policy sets out design principles for new development but will not itself result in new development.	None	Yes
Policy D4: Design principles for market towns and rural villages	None – this policy sets out design principles for new development but will not itself result in new development.	None	Yes
Policy D5: Masterplans	None – this policy sets out design principles for new development but will not itself result in new development.	None	Yes This policy requires ‘significant development on sites occupied by major landowners/users’ to achieve the following, which will contribute to mitigation: f. Reduce the need for car use and encourage sustainable modes of travel, including provision for public

Appendix B Screening matrices

Policy	Likely activities to result as a consequence of the proposal	Likely effect if proposal is implemented	Can likely significant effects be ruled out? (If not, then Appropriate Assessment is required)
			<p>transport, cycle routes, footpaths and bridleways (air pollution).</p> <p>h. Include measures to mitigate the traffic impacts of the proposed development on the strategic and local road networks (air pollution).</p> <p>l. Incorporate a green infrastructure strategy, providing an integrated network of green spaces, taking advantage of opportunities for off-site links to the countryside, South Downs National Park where applicable and wider green network, and where necessary providing alternative recreational space to mitigate potential environmental impacts of development (recreation pressure).</p> <p>o. Demonstrate a good understanding and respect for the natural environment, its heritage assets and their setting both within the site and in the wider locality, whether designated or not, and include details of how the natural environment and heritage assets will be preserved, conserved and enhanced (general protection).</p>
Policy D6: Brownfield development and making best use of land	None – this policy will not result in new development.	None	Yes
Policy D7: Development standards	None – this policy will not result in new development.	None	<p>Yes</p> <p>This policy states that “Where there is potential for adverse impacts to occur on the following matters a</p>

Appendix B Screening matrices

Policy	Likely activities to result as a consequence of the proposal	Likely effect if proposal is implemented	Can likely significant effects be ruled out? (If not, then Appropriate Assessment is required)
			<p>detailed assessment should be conducted: i. odour; ii. light intrusion/glare; iii. ambient air quality; iv. water pollution; v. contaminated land; and vi. construction phase pollution impacts for large or prolonged developments.</p> <p>The report should identify and detail any mitigation measures that are necessary to make the development acceptable in respect of the adverse impacts on health and quality of life. The local Planning Authority may require specific mitigation measures to be undertaken in order to make developments acceptable in terms of matters relating to pollution.” And</p> <p>“Development which generates noise pollution or is sensitive to it will only be permitted where it accords with the Development Plan and does not have an unacceptable impact on human health or quality of life.</p> <p>A noise generating or noise sensitive development should include an assessment to demonstrate how it prevents, or minimises to an acceptable level, all adverse noise impacts.”</p>
Policy D8: Contaminated land	None – this policy will not result in new development.	None	<p>Yes</p> <p>This policy states that development on land affected by contamination will only be permitted where there are no unacceptable impacts on groundwater or surface water; and appropriate mitigation is set out.</p>

Appendix B Screening matrices

Policy	Likely activities to result as a consequence of the proposal	Likely effect if proposal is implemented	Can likely significant effects be ruled out? (If not, then Appropriate Assessment is required)
Policy D9: Impact of overheating	None – this policy will not result in new development.	None	Yes
Policy D10: Shopfronts	None – this policy sets out design principles for new shopfronts but will not itself result in new development.	None	Yes
Policy D11: Signage	None – this policy will not result in new development.	None	Yes
Policy T1: Sustainable and active transport and travel	None – this policy will not result in new development.	None	Yes This policy requires developments to undertake a travel assessment that sets out how it will minimise the need to travel by private car, e.g. with new active travel routes. This policy may contribute to mitigation for air pollution effects.
Policy T2: Parking for new developments	None – this policy will not result in new development.	None	Yes This policy requires developments to prioritise sustainable travel when considering parking. This policy may contribute to mitigation for air pollution effects.
Policy T3: Promoting sustainable modes of transport and the design	None – this policy will not result in new development.	None	Yes This policy requires developments to prioritise sustainable travel when considering parking. This policy may contribute to mitigation for air pollution effects.

Appendix B Screening matrices

Policy	Likely activities to result as a consequence of the proposal	Likely effect if proposal is implemented	Can likely significant effects be ruled out? (If not, then Appropriate Assessment is required)
and layout of parking for new developments			
Policy T4: Access for new developments	None – this policy will not result in new development.	None	Yes This policy requires developments to prioritise the needs of pedestrians and cyclists when considering access. This policy may contribute to mitigation for air pollution effects.
Policy NE1: Protecting and enhancing biodiversity and the natural environment in the district	None – this policy will not result in new development.	None	Yes This policy states that development will only be permitted where it protects and enhances the natural environment and biodiversity. It provides general protection for European sites, stating that development must demonstrate that it: “i. Avoids significant harm to the natural environment, biodiversity and geodiversity or can adequately mitigate any harm arising and can clearly demonstrate that there will be no adverse impact on the conservation status of key species, nationally protected designated sites, or locally designated sites and there will be no net loss or deterioration of a key habitat type including irreplaceable habitats and the integrity of linkages between designated sites and key habitats” and “v. Normally any mitigation, compensation and enhancement measures are required to be delivered on-site, unless special circumstances dictate that off-site compensation is more appropriate. A financial contribution

Appendix B Screening matrices

Policy	Likely activities to result as a consequence of the proposal	Likely effect if proposal is implemented	Can likely significant effects be ruled out? (If not, then Appropriate Assessment is required)
			- in lieu of on-site mitigation - will only be considered in very exceptional circumstances and where it is demonstrated that the proposed mitigation is deliverable and effective; and vi. Protects, conserves and enhances the air and water environments in the district."
Policy NE2: Major commercial, educational and MOD establishments in the countryside	None – this policy sets out development principles but will not itself result in new development.	None	Yes
Policy NE3: Open space, sport and recreation	None – this policy will not result in new development.	None	Yes This policy sets out standards for the provision of new open space, which may help to reduce recreation pressure effects.
Policy NE4: Green and blue infrastructure	None – this policy will not result in new development.	None	Yes This policy sets out principles for new green infrastructure, which may help to reduce recreation pressure effects.
Policy NE5: Biodiversity	None – this policy will not result in new development.	None	Yes This policy requires developments to demonstrate how biodiversity will be retained, protected and enhanced, which contributes to general protection of European sites..

Appendix B Screening matrices

Policy	Likely activities to result as a consequence of the proposal	Likely effect if proposal is implemented	Can likely significant effects be ruled out? (If not, then Appropriate Assessment is required)
Policy NE6: Flooding and flood risk	None – this policy will not result in new development.	None	Yes This policy encourages the use of SuDS and requires developments to ensure that “water supply, surface water drainage and wastewater infrastructure to service new development are provided and connect to the nearest point of adequate capacity where feasible“. This will contribute to mitigation for water quality/quantity effects.
Policy NE7: Settlement gaps	None – this policy will not result in new development.	None	Yes
Policy NE8: South Downs National Park	None – this policy sets out development principles but will not itself result in new development.	None	Yes
Policy NE9: Landscape character	None – this policy will not result in new development.	None	Yes
Policy NE10: Protecting open areas	None – this policy will not result in new development.	None	Yes
Policy NE11: Open space provision for new developments	None – this policy will not result in new development.	None	Yes This policy sets out standards for the provision of new open space, which may help to reduce recreation pressure effects

Appendix B Screening matrices

Policy	Likely activities to result as a consequence of the proposal	Likely effect if proposal is implemented	Can likely significant effects be ruled out? (If not, then Appropriate Assessment is required)
Policy NE12: Equestrian development	Equestrian development Changes in vehicle traffic Changes of land use	Air pollution Changes in water quality / quantity Non-physical disturbance Physical damage / loss Fragmentation / severance Recreation pressure / urban edge effects	No
Policy NE13: Leisure and recreation in the countryside	Leisure facilities Changes in vehicle traffic Changes in water quality / quantity Changes of land use	Air pollution Changes in water quality / quantity Non-physical disturbance Physical damage / loss Fragmentation / severance Recreation pressure / urban edge effects	No
Policy NE14: Rural character	None - this policy sets out development principles but	None	Yes

Appendix B Screening matrices

Policy	Likely activities to result as a consequence of the proposal	Likely effect if proposal is implemented	Can likely significant effects be ruled out? (If not, then Appropriate Assessment is required)
	will not itself result in new development.		States that development in rural areas must not have an unacceptable impact e.g. from lighting or noise. Developments must demonstrate that opportunities to reduce light pollution have followed mitigation hierarchy. This will contribute to mitigation for non-physical disturbance.
Policy NE15: Special trees, important hedgerows and ancient woodlands	None – this policy will not result in new development.	None	Yes This policy sets out protection measures for trees and woodlands, which may contribute to mitigation for loss of or damage to habitats.
Policy NE 16: Nutrient Neutrality water quality effects on the Special Protection Areas (SPAs), Special Areas of Conservation (SACs) and Ramsar sites of the Solent and the River Itchen.	None – this policy will not result in new development.	None	Yes This policy states that: “Planning permission will only be granted where the integrity of nationally protected sites is not adversely affected by new development. When making planning decisions which may affect these sites the requirements of the Habitat Regulations will be met including the carrying out appropriate assessments.” And “When assessing applications for development the impacts of increased nutrients from these sites will be considered. Permission will be granted only where effects can either be excluded or, if that is not possible, mitigation by nutrient neutrality is achieved following the guidance provided by Natural England thereby avoiding any adverse impact upon the quality of the water environment of the sites.”

Appendix B Screening matrices

Policy	Likely activities to result as a consequence of the proposal	Likely effect if proposal is implemented	Can likely significant effects be ruled out? (If not, then Appropriate Assessment is required)
Policy NE17: Rivers, watercourses and their settings	None – this policy will not result in new development.	None	Yes This policy states that developments will be permitted where they conserve and enhance water quality / quantity; and the ability of groundwater and surface water features to function.
Policy HE1: Historic environment	None – this policy will not result in new development.	None	Yes
Policy HE2: All heritage assets (both designated & non-designated)	None – this policy will not result in new development.	None	Yes
Policy HE3: Designated heritage assets	None – this policy will not result in new development.	None	Yes
Policy HE4: Non-designated heritage assets	None – this policy will not result in new development.	None	Yes
Policy HE5: Mitigation and avoiding the loss of heritage assets (designated and non-designated heritage assets)	None – this policy will not result in new development.	None	Yes
Policy HE6: Scheduled monuments and nationally	None – this policy will not result in new development.	None	Yes

Appendix B Screening matrices

Policy	Likely activities to result as a consequence of the proposal	Likely effect if proposal is implemented	Can likely significant effects be ruled out? (If not, then Appropriate Assessment is required)
important non-designated assets			
Policy HE7: Non-designated archaeological assets	None – this policy will not result in new development.	None	Yes
Policy HE8: Applications affecting listed buildings	None - this policy sets out development principles but will not itself result in new development.	None	Yes
Policy HE9: Change of use to listed buildings	None - this policy sets out development principles but will not itself result in new development.	None	Yes
Policy HE10: Development in Conservation Areas	None - this policy sets out development principles but will not itself result in new development.	None	Yes
Policy HE11: Demolition in Conservation Areas	None - this policy sets out development principles but will not itself result in new development.	None	Yes

Appendix B Screening matrices

Policy	Likely activities to result as a consequence of the proposal	Likely effect if proposal is implemented	Can likely significant effects be ruled out? (If not, then Appropriate Assessment is required)
Policy HE12: Registered Historic Parks and Gardens	None - this policy sets out development principles but will not itself result in new development.	None	Yes
Policy HE13: Non-designated historic rural and industrial heritage assets	None - this policy sets out development principles but will not itself result in new development.	None	Yes
Policy HE14: Improvements or alterations to improve the energy efficiency of designated and non-designated historic assets	None - this policy sets out development principles but will not itself result in new development.	None	Yes
Policy H1: Housing provision (Winchester town: 5,770 homes; South Hampshire urban areas: 5,700 homes; Market towns and rural areas: 4,240 homes, of which 500 in SDNP Local Plan)	Residential development Changes in vehicle traffic Changes in water use Changes in land use	Air pollution Changes in water quality / quantity Non-physical disturbance Physical damage / loss Fragmentation / severance	No Note that the distribution of these homes is detailed in Policy H3, but assessed in relation to Policy H1.

Appendix B Screening matrices

Policy	Likely activities to result as a consequence of the proposal	Likely effect if proposal is implemented	Can likely significant effects be ruled out? (If not, then Appropriate Assessment is required)
		Recreation pressure / urban edge effects	
Policy H2: Housing phasing and supply (c.15,700 homes over the Plan period)	None – this policy sets out the phased delivery of the housing in Policy H1, but will not itself result in new development.	None	Yes
Policy H3: Spatial housing distribution	None – this policy sets out further details of the distribution of housing in Policy H1, but will not itself result in new development.	None	Yes
Policy H4: Development within settlements	Residential development Changes in vehicle traffic Changes in water use Changes in land use	Air pollution Changes in water quality / quantity Non-physical disturbance Physical damage / loss Fragmentation / severance Recreation pressure / urban edge effects	No Note that this policy permits development within named settlements, outside of specific site allocations and areas identified in Policy H1.

Appendix B Screening matrices

Policy	Likely activities to result as a consequence of the proposal	Likely effect if proposal is implemented	Can likely significant effects be ruled out? (If not, then Appropriate Assessment is required)
Policy H5: Meeting housing needs	None - this policy sets out development principles but will not itself result in new development.	None	Yes
Policy H6: Affordable housing	None - this policy sets out development principles but will not itself result in new development.	None	Yes
Policy H7: Affordable housing exception sites to meet local needs	None - this policy sets out development principles but will not itself result in new development.	None	Yes
Policy H8: Small dwellings in the countryside	Small-scale residential development Changes in vehicle traffic Changes in water use	Air pollution Changes in water quality / quantity Recreation pressure / urban edge effects	Yes There is a potential impact pathway, but the development would be small scale and effects therefore not significant.
Policy H9: Purpose built student accommodation	Student residential development Changes in vehicle traffic Changes in water use Changes in land use	Air pollution Changes in water quality / quantity Non-physical disturbance	No

Appendix B Screening matrices

Policy	Likely activities to result as a consequence of the proposal	Likely effect if proposal is implemented	Can likely significant effects be ruled out? (If not, then Appropriate Assessment is required)
		Physical damage / loss Fragmentation / severance Recreation pressure / urban edge effects	
Policy H10: Houses in Multiple Occupation (HMOs)	Increase in the number of residents within a property Changes in vehicle traffic Changes in water use	Air pollution Changes in water quality / quantity Recreation pressure / urban edge effects	Yes There is a potential impact pathway, but the development would be small scale and effects therefore not significant.
Policy H11: Housing for essential rural workers	Small-scale residential development Changes in vehicle traffic Changes in water use	Air pollution Changes in water quality / quantity Recreation pressure / urban edge effects	Yes There is a potential impact pathway, but the development would be small scale and effects therefore not significant.
Policy H12: Provision for Gypsies, Travellers and Travelling Showpeople (associated with three allocated sites: H16, H17, H18)	Residential development Changes in vehicle traffic Changes in water use Changes in land use	Air pollution Changes in water quality / quantity Non-physical disturbance Physical damage / loss	No

Appendix B Screening matrices

Policy	Likely activities to result as a consequence of the proposal	Likely effect if proposal is implemented	Can likely significant effects be ruled out? (If not, then Appropriate Assessment is required)
		Fragmentation / severance Recreation pressure / urban edge effects	
Policy H13: Safeguarding Traveller sites	None - this policy will not result in new development.	None	Yes
Policy H14: Traveller site intensification	None - this policy sets out development principles but will not itself result in new development.	None	Yes Note that the development that could come forward in relation to this policy is assessed under Policy H12.
Policy H15: New / expanded Traveller sites	None - this policy sets out development principles but will not itself result in new development.	None	Yes Note that the development that could come forward in relation to this policy is assessed under Policy H12 (which defines the quantum of development). Proposals for new traveller sites, including expansion of the sites safeguarded in Policy H13, will be permitted within the settlement boundaries or through infilling, in accordance with Policy H4.
Policy E1: General vibrant economy strategy	None - this policy will not result in new development.	None	Yes
Policy E2: Spatial distribution of economic growth	Employment development Changes in vehicle traffic	Air pollution	No Note that this policy defines the locations in which economic development can take place, at 7 site

Appendix B Screening matrices

Policy	Likely activities to result as a consequence of the proposal	Likely effect if proposal is implemented	Can likely significant effects be ruled out? (If not, then Appropriate Assessment is required)
(associated with 7 site allocations)	Changes in water use Changes in land use	Changes in water quality / quantity Non-physical disturbance Physical damage / loss Fragmentation / severance	allocations. These allocations have associated development quanta.
Policy E3: Town centres strategy and hierarchy	Tourism and hotel development Changes in vehicle traffic Changes in water use	Air pollution Changes in water quality / quantity Non-physical disturbance Recreation pressure / urban edge effects	No Note that the quantum of residential and commercial development permitted within the policy is assessed in Policies H1 & H4 (housing) and E2 (economic development). However tourism and hotel development is assessed as part of this policy.
Policy E4: Retail and main town centre uses	Retail development Changes in vehicle traffic	Air pollution Non-physical disturbance Changes in water quality / quantity	No
Policy E5: Enhancing employment opportunities	None - this policy sets out development principles but	None	Yes

Appendix B Screening matrices

Policy	Likely activities to result as a consequence of the proposal	Likely effect if proposal is implemented	Can likely significant effects be ruled out? (If not, then Appropriate Assessment is required)
	will not itself result in new development.		
Policy E6: Retaining employment opportunities	None - this policy sets out development principles but will not itself result in new development.	None	Yes
Policy E7: Maintaining the vitality and viability of town centre uses	None - this policy sets out development principles but will not itself result in new development.	None	Yes
Policy E8: Local shops, services and facilities	Retail and commercial development Changes in vehicle traffic	Air pollution Non-physical disturbance Changes in water quality / quantity	No
Policy E9: Economic development in the rural area	Retail, tourism and commercial development Changes in vehicle traffic	Air pollution Non-physical disturbance Changes in water quality / quantity	No
Policy E10: Farm diversification	Changes in land use Changes in vehicle traffic	Air pollution	No

Appendix B Screening matrices

Policy	Likely activities to result as a consequence of the proposal	Likely effect if proposal is implemented	Can likely significant effects be ruled out? (If not, then Appropriate Assessment is required)
	Changes in water use	Changes in water quality / quantity	Note that proposals that attract visitors to the farm (eg retailing, cafes, visitor activities, education and leisure activities) are considered in Policy E8, Rural Tourism below. Equestrian development is considered in Policy NE12. Proposals for renewable and low carbon energy schemes will be assessed against Policy CN5.
Policy E11: Visitor-related development within the countryside	Tourism and hotel development Changes in vehicle traffic Changes in water use	Air pollution Changes in water quality / quantity Non-physical disturbance Recreation pressure / urban edge effects	No
Bypass Reservation SH6: Botley Bypass	None – this policy safeguards land for proposals identified in the Hampshire Local Transport Plan but will not itself result in development.	None	Yes

Site allocations

The following policies are associated with the Plan's site allocations -

Policy H12: Provision for Gypsies, Travellers and Travelling Showpeople:

- Policy H16: The Nurseries, Shedfield (additional plots, number unknown)
- Policy H17: Carousel Park, Micheldever (8 plots)
- Policy H18: Tynefield, Whiteley (20 pitches)

Policy H1: Housing provision:

Strategic allocations:

- Strategic Housing Allocation SH1: West of Waterlooville (c.3,000 homes)
- Strategic Housing Allocation SH2: North Whiteley (c.3,500 already allocated, plus 190 additional homes. Allocation includes sites CU14, CU18, CU24, CU34, CU45)
- Housing Allocation SH3: Whiteley Green (75 homes)

Winchester allocations:

- Policy W1: Barton Farm (1,680 homes)

Appendix B Screening matrices

- Policy W2: Sir John Moore Barracks (900 homes)
- Policy W3: St Peter's Car Park (30 homes)
- Policy W4: Courtenay Road (100 homes)
- Policy W7: Central Winchester Regeneration area (400 homes)
- Policy W8: Station Approach area (250 homes)
- Policy W9: Bar End Depot (30 homes)
- Policy W10: River Park (100 homes)
- Policy W11: Winchester University / Hospital area (200 homes)

Market towns and rural area:

- Policy BW1: The Vineyard/Tangier Lane (120 homes)
- Policy BW2: Albany Farm (120 homes)
- Policy BW3: Tollgate Sawmill (10 homes)
- Policy BW4: Land north of Rareridge Lane (100 homes)
- Policy NA1: The Dean (130 homes)
- Policy NA2: Sun Lane (320 homes)
- Policy CC1: Clayfield Park (48 homes)

Appendix B Screening matrices

- Policy CC2: Colden Common Farm (45 homes)
- Policy CC3: Land at Main Road (35 homes)
- Policy CC4: Land adjoining 85 Church Lane (10 homes)
- Policy D1: Denmead Neighbourhood Plan Designated Area (100 homes)
- Policy KW1: Cornerways & Merrydale (30 homes)
- Policy KW2: Land adjoining the Cart & Horses PH (70 homes)
- Policy WK1: Winchester Road (125 homes)
- Policy WK2: The Glebe (80 homes)
- Policy WK4: Land North of Ravenswood House Hospital Wickham (200 homes)
- Policy HU1: Hursley Neighbourhood Plan Designated Area (number of homes not specified)
- Policy O1: Gladman Land off Main Road (55 homes)
- Policy SWO1: Land at West Hill Road North (40 homes)
- Policy SW1: The Lakes (100 homes)
- Policy WC1: Morgans Yard (100 homes)

Policy E2: Spatial distribution of economic growth:

- Employment allocation SH4: Solent Business Park (11,000 sqm)

Appendix B Screening matrices

- Employment allocation SH5: Little Park Farm (4,000 sqm)
- Policy W5: Bushfield
- Policy W6: Winnall
- Policy W8: Station Approach
- The employment components of mixed use policies: W1, W2, W7, W9, WC1

Standalone policies (ie not associated with another policy that defines quantum):

- Bypass Reservation SH6: Botley Bypass – assessed in policies table, above.

Table B.2: Screening matrix - allocated sites

Type of impact	Screening criteria (Development site could have a significant effect if...)	Potential development sites meeting screening criteria (sites to be considered in Appropriate Assessment)
Physical damage and loss of habitat Fragmentation and severance	Development occurs within or immediately adjacent to a European site or functionally linked habitat.	No allocated sites are within a European site Sites W6 and SH2 are adjacent to European sites. Parts of SH2 were surveyed as potential FLL and identified as 'low use site' as part of the Solent Waders and Brent Goose Strategy work. Further allocations may be present in areas of FLL that have not yet been surveyed/identified.
Non-physical disturbance	Development occurs within 500m of a European site or functionally linked habitat that supports qualifying features susceptible to impacts from non-physical disturbance, such as vibration, noise or light; ie development within 500m of: <ul style="list-style-type: none"> ■ River Itchen SAC (and its FLL) ■ Solent & Southampton Water SPA/Ramsar (and its FLL) 	River Itchen SAC (and its FLL): KW1, KW2, NA1, W3, W4, W5, W6, W7, W9, W10, CC3. Solent & Southampton Water SPA/Ramsar (and its FLL): SH2 (including subsites CU18, CU24, CU34 and CU45)
Air pollution	Development is within 200m from roads forming part of the primary road network (motorways and 'A' roads), and increases	All allocated sites (in combination). These European sites are all outside the Plan area but development contributing traffic to the A3 (east of the Plan

Appendix B Screening matrices

Type of impact	Screening criteria (Development site could have a significant effect if...)	Potential development sites meeting screening criteria (sites to be considered in Appropriate Assessment)
	<p>traffic flows by at least 1,000 AADT or 200 AADT (alone or in combination) on the following roads:</p> <ul style="list-style-type: none"> ■ Butser Hill SAC: A3 ■ Chichester & Langstone Harbour SPA/Ramsar: A3(M), A27, A2030, A3023; A259 ■ New Forest SAC, SPA/Ramsar: A36, M27 ■ Portsmouth Harbour SPA/Ramsar: A27, M27, M275 ■ River Itchen SAC: A31, A34, M3, M27 ■ Solent Maritime SAC and Solent & Southampton Water SPA/Ramsar: A3(M), A27, A2030, A3023; A259, M27, M271, A35, A36 ■ Salisbury Plain SAC and Porton Down SPA: A30 ■ Woolmer Forest SAC and Wealden Heath SPA: A3, A325 	<p>area), A303 (northwest of the Plan area) and M27 (south of the Plan area) would be the most likely to increase traffic past these European sites.</p>

Appendix B Screening matrices

Type of impact	Screening criteria (Development site could have a significant effect if...)	Potential development sites meeting screening criteria (sites to be considered in Appropriate Assessment)
Changes in water quantity or quality	Development extracting from or discharging to the Test and Itchen Catchment (River Itchen SAC plus Solent & Dorset Coast SPA, Solent & Southampton Water SPA/Ramsar and Solent Maritime SAC) or East Hampshire Catchment (Solent & Dorset Coast SPA, Solent & Southampton Water SPA/Ramsar and Solent Maritime SAC)	<p>All sites allocations could increase abstraction / discharge in these catchments.</p> <p>In addition, developments in close proximity to European sites could result in direct run off (e.g. during construction). Sites within 500m of European sites are:</p> <ul style="list-style-type: none"> ■ River Itchen SAC are: KW1, KW2, NA1, W3, W4, W5, W6, W7, W9, W10, CC3 ■ Solent & Southampton Water SPA/Ramsar: SH2 (including subsites CU18, CU24, CU34 and CU45)
Recreation pressure and urban edge effects	<p>Increases in population are likely to result in significant increases in recreation at a European site, either alone or in-combination.</p> <p>Residential site allocations within 5km ZOI of:</p> <ul style="list-style-type: none"> ■ Shortheath Common SAC ■ Woolmer Forest SAC 	<p>ZOIs fall outside the Plan area for:</p> <ul style="list-style-type: none"> ■ Shortheath Common SAC, ■ Woolmer Forest SAC, ■ Wealden Heaths Phase 2 SPA <p>No residential site allocations within the ZOIs for:</p> <ul style="list-style-type: none"> ■ Mottisfont Bats SAC ■ New Forest: H18, SH2 (incl. CU14, CU18, CU24, CU34), SH3, WK4 are within 13.8km in a direct line. However, Solent Water is between these sites and the

Appendix B Screening matrices

Type of impact	Screening criteria (Development site could have a significant effect if...)	Potential development sites meeting screening criteria (sites to be considered in Appropriate Assessment)
	<ul style="list-style-type: none"> ■ Wealden Heaths Phase 2 SPA <p>Residential site allocations within 5.6km ZOI of:</p> <ul style="list-style-type: none"> ■ Solent & Southampton Water SPA/Ramsar ■ Chichester & Langstone Harbours SPA/Ramsar ■ Portsmouth Harbour SPA ■ Solent & Dorset Coast SPA <p>Residential site allocations within 7.5km ZOI of:</p> <ul style="list-style-type: none"> ■ Mottisfont Bats SAC <p>Residential site allocations within 13.8km ZOI of:</p> <ul style="list-style-type: none"> ■ New Forest SAC/SPA/ Ramsar 	<p>New Forest, so actual travel distance is significantly further (at least 20 miles by road)</p> <p>Residential sites allocations within ZOIs for:</p> <ul style="list-style-type: none"> ■ Solent & Southampton Water SPA/Ramsar: H16, H18, SH2 (incl. CU14, CU18, CU24, CU34), SH3, WC1, WK4. ■ Chichester & Langstone Harbours SPA/Ramsar: SH1. ■ Portsmouth Harbour SPA: H18, SH1, SH3, WK2, WK4. ■ Solent & Dorset Coast SPA: as for all three of the above.

Appendix C

Record of consultation

Table 6.3: Record of consultation

Consultee and date	Comment	Response
Commenting on: HRA Scoping		
Natural England 11 August 2020	<p>Natural England advises that one of the main issues which should be considered in the plan and the SA/HRA are proposals which are likely to generate additional nitrogen emissions as a result of increased traffic generation, which can be damaging to the natural environment.</p> <p>The effects on local roads in the vicinity of any proposed development on nearby designated nature conservation sites (including increased traffic, construction of new roads, and upgrading of existing roads), and the impacts on vulnerable sites from air quality effects on the wider road network in the area (a greater distance away from the development) can be assessed using traffic projections and the 200m distance criterion followed by local Air Quality modelling where required. We consider that the designated sites at risk from local impacts are those within 200m of a road with increased traffic, which feature habitats that are vulnerable to nitrogen deposition/acidification. APIS provides a searchable database and information on pollutants and their impacts on habitats and species.</p>	These impacts have been considered at the Screening stage (Chapter 4) and Appropriate Assessment (Chapter 5)
	<p>Various water quality impacts may arise from the local plan which will require consideration within the SA and HRA (local plan and project-level). These include impacts on the River Itchen SAC and SSSI and River Test SSSI and associated headwaters via phosphorus discharges and poor quality surface run-off. When considering eutrophication, phosphates are currently a limiting factor within the River Itchen.</p>	These impacts have been considered at the Screening stage (Chapter 4) and Appropriate Assessment (Chapter 5)

Appendix C Record of consultation

Consultee and date	Comment	Response
	<p>...</p> <p>Impacts on the Itchen SAC/SSSI from poor water quality of surface run-off during construction and operational phases will also require consideration under the Habitats Regulations.</p> <p>...</p> <p>Impacts on protected waterbodies outside of the District, in particular nitrogen enrichment within the Solent European designated sites within the Hamble river/estuary and along the coast, will also require consideration. It is Natural England's advice that the local plan should ensure new housing development is nutrient neutral.</p>	
	<p>The local plan should recognise the current uncertainty with regards to water resources and the impacts of abstraction and drought on protected sites including the River Itchen SAC.</p> <p>...</p> <p>It should also be noted that following the Environment Agencies changes to Southern Water abstraction licences to protect the Itchen SAC, a compensation and mitigation packages have been agreed between the Environment Agency, Natural England and Southern Water that will enable sustainability reductions to protect the River Itchen SAC to be implemented while ensuring that Southern Water can meet its statutory duties. Some of the required compensatory habitat may be implemented along some of the upper un-designated reaches of the Itchen within the District, which may have implications for development affecting that stretch of the river and associated headwaters. It is advised that the SA and local plan HRA further considers this aspect to help inform policy. Further details on locations of this compensatory habitat will be provided once Natural England has had confirmation of its location.</p>	<p>These impacts have been considered at the Screening stage (Chapter 4) and Appropriate Assessment (Chapter 5)</p> <p>If 'compensatory habitat' is required in response to impacts associated with the Local Plan, then the Plan would fail the Appropriate Assessment by default (ie adverse effects on the integrity of the SAC have not been avoided) and the Local Plan would need to proceed to the HRA derogation tests (demonstrating 'imperative reasons of overriding public</p>

Appendix C Record of consultation

Consultee and date	Comment	Response
		interest', which is onerous). This issue will require further consultation with Natural England and Southern Water to understand the issue and agree an appropriate response.
	<p>It is advised that the IIA Scoping Report identifies that parts of the Winchester City Council area fall within the 5.6km zone of influence for the Solent and Southampton Water Special Protection Areas (SPA) , which is covered by the Solent Recreation Mitigation Partnership (SRMP) strategic solution and the 20km zone of influence for the New Forest.</p> <p>...</p> <p>Regarding the New Forest it is understood Winchester City Council do not sit on the New Forest International Designation Working Group that seeks to devise a joint mitigation strategy to deal with the issue, however are party to the data produced by this group. It is advised the local plan sets out an objective to develop an interim strategy to ensure development coming through can address the issue appropriately.</p>	The HRA has relied on more recent work which defines a smaller ZOI; see paragraph 4.73. This is in line with the more recent response from NE to the Issues & Priorities consultation, below.
	We broadly agree with the scoping assessment. In addition it should assess direct and indirect impacts to qualifying species for example Southern Damselfly and White Clawed Crayfish in the River Itchen SAC. It should also take into account the Southern Water compensation package in the upper reaches of the River Itchen.	<p>These impacts have been considered at the Screening stage (Chapter 4) and Appropriate Assessment (Chapter 5)</p> <p>Note comment on 'compensation', above.</p>

Appendix C Record of consultation

Consultee and date	Comment	Response
<p>South Downs National Park Authority</p> <p>11 August 2020</p>	<p>Have we correctly identified the European sites that should be scoped-in to the HRA of the Local Plan (see Chapter 3)?</p> <p>As identified on Figure 3.1 (page 15) and Figure 3.2 (page 17) the River Itchen Special Area of Conservation (SAC) is an area of importance within the SDNPA, Winchester and other Local Authorities. It runs from Hinton Ampner north towards New Alresford, then west to the south of Itchen Stoke towards Winchester City. It then continues south through the City and cuts in and out of the National Park, where it continues south towards Eastleigh.</p> <p>The HRA that accompanied the South Downs Local Plan (https://www.southdowns.gov.uk/wp-content/uploads/2018/04/SDLP-05-Habitats-Regulations-Assement-2018.pdf) captured some of the key issues with the River Itchen SAC. The key issues were hydrology based, and a principal threat has been decreased flow velocities affecting Macrophyte cover. There have been declines in Ranunculus since 1990; a vegetation that was part of the SAC designation initially. The SDNPA does not consider recreational pressure to be of particular concern for the River Itchen SAC, however dog walkers and disturbance of wildlife should be a consideration.</p> <p>Also although not an SAC/SPA, St Catherine's Hill within the SDNP is of partial importance. Hugely sensitive landscape and views with high Download features.</p>	<p>Noted; River Itchen has been considered in relation to recreation pressure but screened out (paragraph 4.69)</p> <p>The sensitivity of St Catherine's Hill is relevant to the IIA but not the HRA.</p>
	<p>Have we correctly identified the sensitivities of the scoped-in European sites to potential impacts from the Local Plan (see Chapter 3 and Appendix A)?</p> <p>Generally, yes, however there may be more detail within the SDNP HRA mentioned above. Paragraph 5.3.6 of the SDNP HRA concluded that no adverse effect upon the River Itchen SAC will result from development provided by the Local Plan 'in combination' with growth from other sources, in regards to air quality. This is mainly due to roadside NOx concentrations being so low in this area (from car exhausts) due to the rural nature of the road and low traffic flow. However, within the Winchester City itself the nitrogen levels may</p>	<p>Noted; River Itchen SAC has been screened in with regard to air pollution.</p> <p>Southern Water still need to be consulted.</p>

Appendix C Record of consultation

Consultee and date	Comment	Response
	<p>be higher. It may be worthwhile mentioning the River Itchen SAC under Air Pollution as something to look into. The SDNPA would be welcome to any further discussion on this.</p> <p>Hydrology and water quantity are main causes of concern with the River Itchen SAC. Currently the SAC is vulnerable to changes in both water quantity and water quality. These were issues that the SDNPA through the preparation of the Local Plan, liaised and consulted with Natural England and the Environment Agency heavily. Water quality is linked to Nitrates, and is something that the SDNPA worked closely with the Environment Agency on during the SDLP preparation. I can see from the report that this is an issue that WCC are aware of, and the SDNPA will offer support wherever possible along with other stakeholders.</p> <p>In regards to water quantity, the SDNPA would suggest liaising with Southern Water. Paragraph 6.2.18 notes identified areas from Southern Water to meet the need of future water supply requirements to 2040. We were advised to meet with Southern Water when relevant applications are consented to confirm how their water supply requirements are to be met in the absence of the Candover Augmentation Scheme. It may be worthwhile to liaise early on any strategic options to verify any issues at a very early stages, and how mitigation could be sought.</p> <p>The HRA also covers the Solent European sites such as Chichester & Langstone Harbour SPAC/Ramsar site that may be of interest.</p>	
	<p>Are there other plans or major projects that we should take into account in the assessment of potential in-combination effects (Appendix B)?</p> <p>Consideration of the allocations through the SDLP due to their proximity to the River Itchen SAC. Run off from sites could results in a reduction in water quality and overall hydrology changes.</p>	<p>These will be considered once further consultation with Southern Water has occurred (see paragraph 6.14)</p>

Appendix C Record of consultation

Consultee and date	Comment	Response
	<ul style="list-style-type: none"> ■ SD63: Land South of the A272 at Hinton Marsh (Cheriton) and; ■ SD76: Land at Itchen Abbas (Itchen Abbas). <p>The Twyford Neighbourhood Plan is currently passed the Regulation 14 stage. It currently has two policies DB1: Land adjacent to the Parish Hall that proposes 20 dwellings, and the DB2: Redevelopment of Stacey's Garage, this site may have contamination issues. The SDLP HRA in paragraph 6.2.11 notes that the applicant for site DB1 will need to provide a drainage plan. To show either utilising existing mains at the nearest point of capacity or will be dealt with by small package treatment plant.</p>	
	<p>Is the proposed approach to HRA of the Local Plan reasonable (Chapter 2)?</p> <p>The SDNPA deems the proposed approach to the HRA for the Local Plan to be reasonable and thorough. And the SDNPA will support and input in any way possible.</p>	Noted
Local Plan Strategic Issues and Priorities Consultation		
Natural England 29 April 2021	<p>Nutrient neutrality</p> <p>It is welcomed that the Council is seeking to allocate land through the local plan process to strategically address the impact of nutrients from new development on the River Itchen SAC and Solent marine designated sites, which are currently showing levels of eutrophication with consequential effects on protected species and habitats.</p> <p>It is advised a nitrogen budget is calculated for the Local Plan and a strategy is devised for delivering nutrient neutral mitigation for all sites. Mitigation can come forward via several different options including on-site provision by larger development sites through green infrastructure/open space or by a local authority-led scheme for the smaller/windfall development or where any top-up is required from larger developments. Other wider strategic schemes approved by the local authority and Natural England may also be</p>	Noted and incorporated into next steps (Chapter 6).

Appendix C Record of consultation

Consultee and date	Comment	Response
	<p>available and where these are relied upon it is advised that credits are secured/reserved to ensure that there is adequate supply available for the local plan growth. Bespoke solutions at Neighbourhood plan or development level can also come forward.</p> <p>Please note that the term 'nutrient' or 'nitrogen' should be used when discussing eutrophication of the marine Solent designated sites ('nitrates' specifically is a component of total nitrogen). When discussing eutrophication of riverine systems, 'phosphorus' should be the term used rather than 'phosphates'.</p> <p>River Itchen – phosphorus</p> <p>With regards to eutrophication, phosphorus is currently a limiting factor within the River Itchen SAC. The local plan should seek to preserve water quality on the Itchen and ensure that local plan and windfall development within the district will not increase the phosphorus loading on the SAC from wastewater and surface run off.</p>	
	<p>Water resources</p> <p>The intention for stricter water use in the district is discussed under Issue 1 Carbon Neutrality. The water resource problems in the region also have implications for protected sites within the district, particularly the River Itchen Special Area of Conservation (SAC).</p> <p>Natural England strongly recommend that all new development adopt a higher standard of water efficiency of 100 litres/per person/day, including external water use and re-use, in line with Southern Water's Target 100 demand reduction programme. Consideration should be given to the use of grey water recycling systems and efficient appliances.</p>	<p>The higher water efficiency standard has been incorporated into the Local Plan and assessed in the HRA.</p>
	<p>River Itchen compensatory habitat</p> <p>It should be noted that following the Environment Agency changes to Southern Water abstraction licences to protect the River Itchen SAC, compensation packages have been agreed between the Environment Agency, Natural England and Southern Water as a result of the Test and Itchen Public Inquiry and the S20 agreement. The River Meon is being</p>	<p>See comments on 'compensation', above. Further consultation is required to understand the implications of this.</p>

Appendix C Record of consultation

Consultee and date	Comment	Response
	<p>considered as compensatory habitat for Atlantic Salmon, therefore it is advised that the local plan HRA considers the River Meon as a proposed SAC for Atlantic Salmon. This is also likely to have implications for the headwaters of the Meon. Further details on locations of this compensatory habitat will be provided once Natural England has had confirmation of its location.</p>	<p>River Meon pSAC has now been screened in.</p>
	<p>Air Quality</p> <p>It is Natural England's advice that poor air quality may have adverse impacts on protected sites. We have provided comments on the Air Quality Supplementary Planning Document consultation (email, 8th April 2021).</p> <p>We would expect the plan to address the impacts of air quality on the natural environment. In particular, it should address the traffic impacts associated with new development, particularly where this impacts on European sites and SSSIs. The environmental assessment of the plan (SA and HRA) should also consider any detrimental impacts on the natural environment, and suggest appropriate avoidance or mitigation measures where applicable.</p> <p>Natural England advises that one of the main issues which should be considered in the plan and the SA/HRA are proposals which are likely to generate additional nitrogen emissions as a result of increased traffic generation, which can be damaging to the natural environment.</p> <p>The effects on local roads in the vicinity of any proposed development on nearby designated nature conservation sites (including increased traffic, construction of new roads, and upgrading of existing roads), and the impacts on vulnerable sites from air quality effects on the wider road network in the area (a greater distance away from the development) can be assessed using traffic projections and the 200m distance criterion followed by local Air Quality modelling where required. We consider that the designated sites at risk from local impacts are those within 200m of a road with increased traffic, which feature habitats that are vulnerable to nitrogen deposition/acidification. APIS provides a</p>	<p>Noted; this is in line with the approach taken in the Screening and Appropriate Assessment.</p>

Appendix C Record of consultation

Consultee and date	Comment	Response
	<p>searchable database and information on pollutants and their impacts on habitats and species: http://www.apis.ac.uk/</p> <p>It is advised that Natural England's approach to advising competent authorities on the assessment of road traffic emissions under the Habitats Regulations is followed when assessing impacts on protected sites.</p>
