Data provided by the British Trust for Ornithology on behalf of The Wetland Bird Survey.

*These tabulations are based exclusively on data collected as part of the monthly Core Counts.*

*For some species (e.g. wintering geese) data collected by other surveys may be more appropriate for the purpose of site assessment.*

*Missing or unexpectedly low counts for gulls and terns should be treated with caution - counting these groups is optional and determination of count effort not always possible.*

*The Wetland Bird Survey is a partnership between the British Trust for Ornithology,  
 the Royal Society for the Protection of Birds and the Joint Nature Conservation Committee,  
 (the latter on behalf of Natural England, Scottish Natural Heritage, the Countryside Council for Wales and  
 the Council for Nature Conservation and the Countryside) in association with the Wildfowl and Wetlands Trust.*
